ARLF Asset Report for April 27, 2017 BAC Meeting

Mt. McKinley Meat and Sausage

A preliminary ESA was received on March 20th, 2017. The preliminary ESA included research results and conclusions, except for conditions obscured by snow and ice. The conditions included potential release of petroleum and chemicals to surface soil primarily from equipment maintenance, and historical subsurface releases from the plugged shop floor drains. Except for these conditions, the preliminary ESA revealed no evidence of remaining REC's. A final ESA is expected to be received by May and then final transitions and the closing can be performed.
