

**Summary:**

This workbook contains general information and current status of all Pebble Project boreholes inspected during 2017 and past inspection results. Information is current as of December 31, 2017.

**Worksheet Organization:**

<b><i>Pebble Boreholes_DEC 2017</i></b>	Summary table of general information, location data, site condition, and most recent inspection for all current Pebble Project boreholes.
<b><i>Field Descriptions</i></b>	Explanation of field content, including data limitations, if any.
<b><i>Borehole Notes</i></b>	Additional notes applicable to individual borehole records describing data limitations. Borehole records with notes are indicated by a bracketed number ('[1]', '[2]', etc.) in the relevant field.
<b><i>Inspection Codes</i></b>	Describes the alpha-numeric codes PLP assigns to each borehole upon inspection. These codes are used to characterize each location according to structural condition and maintenance/reclamation status. Codes are presented in the 'Inspection Rating' field of the summary table.

**Additional Notes:**

1.	Inspection records are current through December 2017. PLP does not have documented inspection records for 41 locations, primarily exploration sites from 1988/89. PLP plans to inspect these locations during the 2016 field season.
2.	The summary table contains 1357 records. However, 2 records (SRK-1 and SRK-2) are re-purposed exploration boreholes now used for monitoring. Relevant information for SRK-1 is reported under Borehole 4225; SRK-2 is reported under Borehole 4251. The SRK-1/2 sites are excluded from summary tabulations.
3.	126 boreholes were completed prior to the effective date of the Alaska Reclamation Statute (AS 27.19)--October 15, 1991.
4.	The summary table contains records for all drill sites dating back to 1988, however current inspection data is provided for only those sites currently part of the Pebble Project.

\* See 'Borehole Notes' worksheet for any bracketed number ([1], [2], etc.)

\*\* Duplicate locations indicated by grey highlight

<b>Field Name</b>	<b>Description</b>
<i>Rec No</i>	Database record number
<i>Borehole ID</i>	PLP borehole identifier
<i>Drill Year</i>	Year in which borehole initially drilled; some drill activities span multiple years due to seasonal shutdown.
<i>Operator</i>	Legal entity responsible for claim activities during drill year: Cominco; Northern Dynasty Minerals, Ltd. (NDM); Full Metal Minerals (FMM); Pebble Limited Partnership (PLP)
<i>Borehole Purpose</i>	Basis for drilling hole, or current use. Some exploration boreholes are re-purposed for monitoring or study.
<i>Total Length (ft)</i>	Linear feet from surface
<i>Reclamation Report Year</i>	Year in which reclamation of drill site was reported to DNR; does not apply to exploration activities prior to October 15, 1991
<i>ADL File No</i>	Claim number on file with ADNR
<i>Northing</i>	(UTM NAD27)
<i>Easting</i>	(UTM NAD27)
<i>MTRS</i>	Meridian, Township, Range, Section for each borehole location
<i>Most Recent Inspection</i>	Date on which most recent documented observation occurred; photos taken during most inspections
<i>Inspection Rating</i>	Alpha-numeric code describing the STATUS and CONDITION of drill site. See 'Inspection Codes' worksheet for detailed explanation.
<i>Field Marker</i>	Structure identifying drill site location by survey ID or borehole ID. Wood post installed at most drill sites following reclamation, usually within a few feet of the original borehole. Posts are not typically installed at monitoring wells, where the above ground structure (monument or casing) serves as the field marker.
<i>Safety Markings</i>	Safety markings installed at locations with surface structures greater than 10 inches above ground.
<i>Surface Structures</i>	Permanent or semi-permanent structures installed at drill site.
<i>Structure Height (in)</i>	Inches above ground, measured perpendicular
<i>Closure Method</i>	Included only for fully decommissioned and closed boreholes.
<i>Note</i>	Inspector's explanation of site conditions, repairs made, or future inspection and repair needs.

Note	Description
[1]	Borehole drilled by Cominco prior to adoption of Reclamation Statute (AS 27.19); reclamation reporting not required prior to 10/15/1991. Reclamation status is based on most recent field inspection, if available.
[2]	Borehole drilled by Cominco in 1992; reclamation records unavailable. Reclamation status is based on most recent field inspection, if available.
[3]	Borehole drilled by Full Metal Minerals in 2008; reclamation records unavailable. PLP subsequently inspected and reclaimed sites in 2010. Reclamation status is reported for most recent inspection, if available.
[4]	Closure records unavailable.
[5]	Drilling records indicate borehole lost in shallow overburden due to collapse or other impediment; grouting not required. Borehole backfilled with excess material. Subsequent inspections have verified site stability.
[6]	Individual borehole data unavailable. 1997 Reclamation Report notes that all boreholes were closed with a bentonite plug.
[7]	Closure method based on review of driller timesheets (2006-2013); drill reports; consumables inventories; and/or standard operating procedures in place at the time.
[8]	Site no longer part of active Pebble Project.

### Borehole Status Codes

Code	Category	Description
1	Active	Primary designation for active monitoring wells (groundwater quality, geotechnical, etc.). Also used for some former exploration boreholes that are maintained as possible water sources. Active sites do not have material plugs (grout, cement, bentonite) but may be fitted with mechanical plugs or caps.
2	Inactive	Site is not currently used as monitoring/study location, but is preserved for potential future use (e.g., additional drilling, water source). Inactive sites maintain aboveground structures (casing, valves, caps).
3	Closed	Site is decommissioned and closed. Borehole has been plugged as appropriate. All surface structures removed, with possible exception of wood post indicating location and borehole ID.

### Maintenance/Reclamation Status Codes

Code	Category	Description
A	Major Repairs	Site condition presents an identified environmental compliance or health & safety concern, or is at risk of progressing if not addressed as soon as possible. Significant repairs necessary, typically requiring advanced planning, technical staff and additional equipment. Coordination and approval from DNR or other agency may be required. <i>Examples: upwelling of discolored or voluminous water; discharge to surface water.</i>
B	Minor repairs	Site condition requires repairs or rehabilitation, but is stable and not at risk of deteriorating further. Work does not require technical staff but generally cannot be completed during routine maintenance trips or by one person. Advance approval from DNR or other agency is usually not required unless circumstances dictate. All repair activities summarized in annual report. <i>Examples: Margo plug replacement/installation; large area rehabilitation or revegetation efforts requiring soil amendments and reseeded.</i>
C	Routine Maintenance or Additional Investigation	Maintenance requirements are small or insignificant and generally the result of normal operation or exposure to elements. Repairs can be completed by staff during routine inspections and do not require specialized equipment or advance planning. Also used to identify sites where conditions cannot be confirmed, thus requiring additional inspection or involvement of higher level staff. <i>Examples: application of sealant around cap; water valve replacement; ponded surface water with unconfirmed source.</i>
D	Stable/Monitored	Site condition is stable and has been fully reclaimed, but with past maintenance issues or known to have higher maintenance needs. All structural equipment, if any, is in good condition. Minimum monitoring is generally more frequent than Category E sites. Also applies to sites that have recently been repaired but require more frequent inspection to verify repairs and reclamation efforts. <i>Examples: artesian sites; sites with recent, major repairs.</i>
E	Stable/No Action	Site condition is stable and has been fully reclaimed. All structural equipment, if any, is in good condition. No known issues. No history of upwellings, leaks, or staining. Located in area unlikely to cause concern (e.g., wetlands, artesian zone). Inspection frequency is lower than Category D sites.
