

Notice

The Director of Mining, Land and Water's April 4, 2008 report responding to the Bureau of Land Management regarding the navigability of the Chuitna (Chuit) River is a public document and states the position of the State of Alaska concerning the navigability of this river. HOWEVER, the State's report is not a navigability determination. Rather, it is a response supporting the State's request that the BLM reconsider a report BLM issued in November 2007 concluding the river is "non-navigable". The Chuitna Field Trip report was submitted as additional information on September 9, 2008.

The State's reports are posted for informational purposes only. No action or activity is authorized based upon the contents of these reports.
