APPENDIX A

Glossary

AAC. Alaska Administrative Code

Access. A way or means of approach. Includes transportation, trail, easements, rights of way, and public use sites.

ACMP. Alaska Coastal Management Plan

ADF&G. Alaska Department of Fish and Game

Anadromous fish stream. A river, lake or stream from its mouth to its uppermost reach including all sloughs and backwaters adjoining the listed water, and that portion of the streambed or lakebed covered by ordinary high water used by salmon to spawn. Anadromous streams are shown in "The Atlas to the Catalog of Waters Important for Spawning, Rearing, or Migration of Salmon" (referred to as the Anadromous Fish Stream Catalog) compiled by ADF&G.

Anchorage. A location commonly used by private, recreation, or commercial vessels for anchoring.

ANCSA. Alaska Native Claims Settlement Act

ANILCA. Alaska National Interest Land Conservation Act

Area Plan. Prepared by DNR, area plans allocate resources and identify allowed and prohibited uses on state lands including uplands, tidelands, and submerged lands.

Aquaculture. Fish enhancement or hatchery development by ADF&G, a private non-profit corporation, or another group. Does not include aquatic farming.

Aquatic farming. The culture and husbandry of marine aquatic organisms, including but not limited to fish, shellfish, mollusks, crustaceans, kelp, and other algae. This does not include fish hatcheries. (Aquatic farming includes any activities that meet the definition of aquatic farming given in AS 16.40.199.)

AS. Alaska Statutes

APPENDIX A

Glossary

AAC. Alaska Administrative Code

Access. A way or means of approach. Includes transportation, trail, easements, rights of way, and public use sites.

ACMP. Alaska Coastal Management Plan

ADF&G. Alaska Department of Fish and Game

Anadromous fish stream. A river, lake or stream from its mouth to its uppermost reach including all sloughs and backwaters adjoining the listed water, and that portion of the streambed or lakebed covered by ordinary high water used by salmon to spawn. Anadromous streams are shown in "The Atlas to the Catalog of Waters Important for Spawning, Rearing, or Migration of Salmon" (referred to as the Anadromous Fish Stream Catalog) compiled by ADF&G.

Anchorage. A location commonly used by private, recreation, or commercial vessels for anchoring.

ANCSA. Alaska Native Claims Settlement Act

ANILCA. Alaska National Interest Land Conservation Act

Area Plan. Prepared by DNR, area plans allocate resources and identify allowed and prohibited uses on state lands including uplands, tidelands, and submerged lands.

Aquaculture. Fish enhancement or hatchery development by ADF&G, a private non-profit corporation, or another group. Does not include aquatic farming.

Aquatic farming. The culture and husbandry of marine aquatic organisms, including but not limited to fish, shellfish, mollusks, crustaceans, kelp, and other algae. This does not include fish hatcheries. (Aquatic farming includes any activities that meet the definition of aquatic farming given in AS 16.40.199.)

AS. Alaska Statutes
ASLS. Alaska State Land Survey

ATS. Alaska Tideland Survey

**Authorized Use.** A use allowed by DNR by permit or lease. (See also *Generally allowed use.*)

**Buffer.** An area of land between two activities or resources used to reduce the effect of one activity upon another.

**Caretaker facilities.** Single or multi-family floating residential facilities used as housing that are necessary to contain equipment or processing facilities for economic development activities, such as commercial timber harvest, mineral exploration or aquatic farming operations, or associated with public activities. Caretaker facilities may be floating facilities or may be located on uplands.

**Classification.** Land classification identifies the purposes for which state land will be managed. All classification categories are for multiple use, although a particular use may be considered primary. Land may be given a total of three classifications in combination.

**Clean fill.** Fill that is free of organics, human refuse, and toxic pollutants.

**Closed to mineral entry.** Areas where the staking of new mineral claims is prohibited because mining has been determined to be in conflict with significant surface uses in the area. Existing mineral claims that are valid at the time of plan adoption are not affected by mineral closures.

**Commissioner.** The Commissioner of the Alaska Department of Natural Resources.

**Concurrence.** Under existing statutes, regulations and procedures, the Department of Natural Resources is required to obtain the approval of other groups before taking a specific action. Concurrence binds all parties to conduct their activities consistent with the approved course of action.

**Consultation.** Under existing statutes, regulations, and procedures, the Department of Natural Resources informs other groups of its intention to take a specific action and seeks their advice or assistance. Consultation is not intended to be binding on a decision. It is a means of informing affected organizations and individuals about forthcoming decisions and getting the benefit of their expertise. DNR replies to parties offering advice or assistance by sending them the decision and the reasons for which the decision was made, or notifying them that the decision and finding are available upon request.

ASLS. Alaska State Land Survey

ATS. Alaska Tideland Survey

**Authorized Use.** A use allowed by DNR by permit or lease. (See also *Generally allowed use.*)

**Buffer.** An area of land between two activities or resources used to reduce the effect of one activity upon another.

**Caretaker facilities.** Single or multi-family floating residential facilities used as housing that are necessary to contain equipment or processing facilities for economic development activities, such as commercial timber harvest, mineral exploration or aquatic farming operations, or associated with public activities. Caretaker facilities may be floating facilities or may be located on uplands.

**Classification.** Land classification identifies the purposes for which state land will be managed. All classification categories are for multiple use, although a particular use may be considered primary. Land may be given a total of three classifications in combination.

**Clean fill.** Fill that is free of organics, human refuse, and toxic pollutants.

**Closed to mineral entry.** Areas where the staking of new mineral claims is prohibited because mining has been determined to be in conflict with significant surface uses in the area. Existing mineral claims that are valid at the time of plan adoption are not affected by mineral closures.

**Commissioner.** The Commissioner of the Alaska Department of Natural Resources.

**Concurrence.** Under existing statutes, regulations and procedures, the Department of Natural Resources is required to obtain the approval of other groups before taking a specific action. Concurrence binds all parties to conduct their activities consistent with the approved course of action.

**Consultation.** Under existing statutes, regulations, and procedures, the Department of Natural Resources informs other groups of its intention to take a specific action and seeks their advice or assistance. Consultation is not intended to be binding on a decision. It is a means of informing affected organizations and individuals about forthcoming decisions and getting the benefit of their expertise. DNR replies to parties offering advice or assistance by sending them the decision and the reasons for which the decision was made, or notifying them that the decision and finding are available upon request.
CSSEAP. Central and Southern Southeast Area Plan

DEC. Alaska Department of Environmental Conservation

**Designated use.** An allowed use of major importance in a particular management subunit. Activities in the subunit will be managed to encourage, develop, or protect this use. Where a subunit has two or more designated uses, the management intent statement and guidelines for the unit and subunit, Chapter 2 guidelines together with existing statutes, regulations, and procedures, will direct how resources are managed, to avoid or minimize conflicts between designated uses.

**Designation.** A category of land allocation determined by a land use plan. Designations identify the primary and co-primary uses for state land.

**Developed recreational facility.** Any structure or facility that serves either public or private recreational needs.

DGC. Division of Governmental Coordination, the division of the State Office of Management and Budget that coordinates Alaska's Coastal Management Program.

**Director.** The division director of the state division responsible for managing state land. Most often, director refers to the Director of the Division of Mining, Land and Water; for lands administered by DPOR, director refers to the Director of DPOR.

**Dispersed recreation.** Recreational pursuits that are not site specific in nature, such as beach combing, recreational boating or wildlife viewing.

DMLW. Division of Mining, Land and Water

**Dock.** A dock is a platform or landing pier that extends over, or onto water, and is usually used for receiving boats.

DOF. Division of Forestry, a division of DNR

**DOT/PF.** Alaska Department of Transportation and Public Facilities

**DPOR.** Division of Parks and Outdoor Recreation, a division of DNR

**Easement.** An interest in land owned by another that entitles it holder to a specific limited use.

CSSEAP. Central and Southern Southeast Area Plan

DEC. Alaska Department of Environmental Conservation

**Designated use.** An allowed use of major importance in a particular management subunit. Activities in the subunit will be managed to encourage, develop, or protect this use. Where a subunit has two or more designated uses, the management intent statement and guidelines for the unit and subunit, Chapter 2 guidelines together with existing statutes, regulations, and procedures, will direct how resources are managed, to avoid or minimize conflicts between designated uses.

**Designation.** A category of land allocation determined by a land use plan. Designations identify the primary and co-primary uses for state land.

**Developed recreational facility.** Any structure or facility that serves either public or private recreational needs.

DGC. Division of Governmental Coordination, the division of the State Office of Management and Budget that coordinates Alaska's Coastal Management Program.

**Director.** The division director of the state division responsible for managing state land. Most often, director refers to the Director of the Division of Mining, Land and Water; for lands administered by DPOR, director refers to the Director of DPOR.

**Dispersed recreation.** Recreational pursuits that are not site specific in nature, such as beach combing, recreational boating or wildlife viewing.

DMLW. Division of Mining, Land and Water

**Dock.** A dock is a platform or landing pier that extends over, or onto water, and is usually used for receiving boats.

DOF. Division of Forestry, a division of DNR

**DOT/PF.** Alaska Department of Transportation and Public Facilities

**DPOR.** Division of Parks and Outdoor Recreation, a division of DNR

**Easement.** An interest in land owned by another that entitles it holder to a specific limited use.
17(b) Easement. Easement across Native corporation land reserved through the Alaska Native Claims Settlement Act (ANCSA). Uses of the easements are limited to transportation purposes and other uses specified in the act and in conveyance documents.

Estuary. A semi-closed coastal body of water which has a free connection with the sea and within which seawater is measurably diluted with fresh water derived from land drainage. [6 AAC 80.900(6)]

Feasible. Capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic environmental, technical, and safety factors.

FEMA. Federal Emergency Management Agency

Feasible and prudent. Consistent with sound engineering practice and not causing environmental, social or economic problems that outweigh the public benefit to be derived from compliance with the guideline modified by the term “feasible and prudent” [from ACMP regulations: 6 AAC 80.900(20)]. A written decision by the land manager is necessary justifying a variation from a guideline modified by the terms “feasible” or “feasible and prudent”. See also, Procedures for Plan Review, Modification, and Amendment: Discretion within Guidelines.

Fish and wildlife. Any species of aquatic fish, invertebrates and amphibians, in any state of their life cycle, and all species of birds and mammals, found or that may be introduced in Alaska, except domestic birds and mammals. The term “area(s)” in association with the term “fish and wildlife” refers to both harvest and habitat areas.

Floatcamp, floating camp, or floating caretaker facility. Single or multi-family floating residential facilities used as housing or that are necessary to contain equipment or processing to support facilities for economic development activities such as commercial timber harvest, mineral exploration or aquatic farming operations, or associated with public activities. (Note: This definition also applies to floatcamps or floating camps.)

Floating residential facilities. A general phrase used to encompass the floathomes, floatlodges, floating caretaker facilities, and floatcamps.

Floathome. Floathouses, houseboats, barges, and boats, powered or not, that are intended for non-commercial residential use. A floathome is generally for single family use and not associated with economic development activities.

Floatlodge. A floating residential facility providing overnight accommodations for commercial recreation services to the public.
**FLUP.** Forest Land Use Plan. Prepared by the Division of Forestry, Alaska Department of Natural Resources

**Forest Service.** U.S. Forest Service

**Forestry.** On tidelands: any activity or structure for timber harvest or for transfer of logs from uplands to tidelands, including, but not limited to felling, yarding and hauling of logs, roads, log transfer facilities, floating A-frame logging, upland and marine log storage areas, and camps and other support facilities associated with timber resource development. On uplands: any activity or structure for the harvest or management of timber resources.

**General Use.** Tidelands, submerged lands, or uplands designated General Use provide some combination of settlement, timber, recreation, habitat or other values. On tidelands and submerged lands, the lack of resource information prevents a specific resource allocation at this time. On uplands, This designation refers to areas where resource information is insufficient to warrant a specific designation, development is unlikely during the planning period of 20 years, or where a number of uses can be accommodated. For specific General Use areas, see the management intent statement of the individual management units in Chapter 3.

**Generally allowed use.** A n Activity conducted on state land managed by the Division of Mining, Land and Water that is not in a special category or status. For the most part these uses are allowed for 14 days or less, and a permit is not required.

**Goal.** A statement of basic intent or general condition desired in the long term. Goals usually are not quantifiable and do not have specified dates for achievement.

**Guideline.** A course of action to be followed by DNR resource managers or required of land users when the manager permits leases, or otherwise authorizes the use of state land or resources. Guidelines also range in their level of specificity from giving general guidance for decision making or identifying factors that need to be considered, to setting detailed standards for on-the-ground decisions. Some guidelines state the intent that must be followed and allow flexibility in achieving it.

**Ha - Habitat.** Areas that serve as a concentrated use area for fish and wildlife species during a sensitive life history state where alteration of the habitat and/or human disturbance could result in a permanent loss of a population or sustained yield of the species. The "Ha" designation is applied to areas with the most valuable habitat. The "Ha" designation does not preclude human uses that are compatible with the following categories.
Fish and wildlife categories used to identify "Ha" (Habitat) designations in this plan include the following:
- anadromous fish spawning and rearing areas in fresh water or brackish intertidal zones. ¹
- estuaries important for rearing or schooling of anadromous fish
- kelp beds covering large areas that are important marine nurseries
- Pacific herring spawning and over-wintering concentration areas
- eulachon spawning concentrations areas
- eelgrass beds that are important marine nurseries
- waterfowl and/or shorebird concentration areas
- dungeness, king, or Tanner crab concentrations areas for mating, rearing or molting (by species)
- seabird breeding habitat within each colony area and a two-mile radius around major breeding colonies (more than 100,000 birds)
- Bald Eagle nest sites or feeding concentration areas
- sea lion haulouts and rookeries
- harbor seal haulout and pupping areas
- bear concentration areas (by season and species)
- moose winter concentration areas
- Sitka black-tailed deer winter concentration areas
- mountain goat winter concentration areas
- Alexander Archipelago wolf concentration areas
- important wildlife migration corridors, including nearshore migration routes.

**Harvest.** Areas of intense fish and wildlife harvest (compared to the rest of the planning area) where the level of harvest has or is projected to reach the harvestable surplus for the resource, or discrete fish and wildlife harvest areas historically important to a community for the harvest of a species where alteration of habitat could permanently limit sustained yield to traditional uses:
- Important areas for human use of fish and wildlife
- Areas with multiple uses of fish and wildlife
- Localized areas of subsistence or community harvest
- localized, very intense harvest areas
- Intensive sport/personal use fishing areas
- Intensive commercial use fishing areas
- Intensive commercial crab or shrimp harvest areas
- Intensive hunting or trapping areas for a game or furbearer species.

**Haulouts.** Locations where concentrations of seals or sea lions have been observed hauled out on shore, during more than one year, to breed, pup, rest, or molt.

¹ Generally this occurs at the mouth of anadromous fish streams to a depth of ~40 feet at mean lower low water. The exact location of this area may vary, however, and an analysis to refine the exact configuration may be justified if significant to a permit decision by DNR.
ILMA. See Interagency Land Management Agreement/Transfer.

ILMT. See Interagency Land Management Agreement/Transfer.

**Improvements.** Buildings, wharves, piers, dry docks, and other similar types of structures permanently fixed to the uplands, tidelands, or submerged lands that were constructed and/or maintained by the applicant for business, commercial, recreation, residential, or other beneficial uses or purposes. In no event shall fill be considered a permanent improvement when placed on the tidelands solely for the purposes of disposing of waste or spoils. However, fill material actually utilized for beneficial purposes by the applicant shall be considered a permanent improvement. [11 AAC 62.840]

**Instream flow.** An instantaneous flow rate of water through a stream during specified periods of time, from a designated location upstream to a designated location downstream.

**Instream flow reservation.** The legal water reservation for instream uses such as fish, wildlife, recreation, navigation, and water quality.

**Interagency Land Management Agreement/Transfer (ILMA/ILMT).** An agreement between DNR and other state agencies that transfers some land management responsibility to these other agencies.

**Land disposal.** Same as *Land offering*, defined below; except that land disposal areas referenced in Chapter 3 may include lots reserved for lease or sale for public commercial, or industrial facilities.

**Land manager.** A representative of the state agency or division responsible for managing state land.

**Land offering.** Transfer of state land to private ownership as authorized by AS 38.04.010, including fee simple sale, homesteading, and sale of agricultural rights. They do not include leases, land-use permits, water rights, rights-of-way, material sales, or other disposals of interest in lands or waters. (See also, *Land disposal*.)

**Land sale.** Same as *Land offering* as defined above.

**Land use designation.** See Designation.

**Land use designations.** Allocations that set out primary or secondary land uses. See definitions of primary and secondary land uses. (Chapter 4 sets out how the land use designations of this plan will be classified according to 11 AAC55.)
Leasable mineral. Leasable minerals include deposits of coal, sulfur phosphates, oil shale, sodium potassium, oil and gas.

Lease. A Department of Natural Resources authorization for the use of state land according to terms set forth in AS 38.05.070-105.

Legislative designation. An action by the state legislature that sets aside a specific area for special management actions and ensures the area is kept in public ownership.

Locatable mineral. Locatable minerals include both metallic (gold, silver, lead, etc.) and nonmetallic (flourspar, asbestos, mica, etc.) minerals.

Log Transfer Facility (LTF). Any facility or mechanism necessary to transfer timber from uplands to marine waters.

Log Transfer Site (LTS). A site for all facilities necessary for transfer of timber from uplands to marine waters, including associated components such as log rafting and sorting areas, floating camps, access ramps, etc. A single site (LTS) may contain more than one facility (TF).

LUD II. Land Use Designations used in the Tongass Land and Resource Management Plan. See TLRMP

Management intent statement. The statements that define the department's near and long-term management objectives and the methods to achieve those objectives.

Mariculture. See Aquatic farming.

Materials. "Materials" include but are not limited to common varieties of sand, gravel, rock, peat, pumice, pumicite, cinders, clay and sod.

MBF. Thousand board feet. A unit of quantity used in forestry. A board foot is a unit of quantity for lumber equal to the volume of a board 12" x 12" x 1 inch.

MCO. See Mineral Closing Order.

Mean high water. The tidal datum plane of the average of all the high tides, as would be established by the National Geodetic Survey at any place subject to tidal influence [from 11 AAC 53.900(14)]. Mean high water is the dividing line between uplands and tidelands.
**Mean low water.** The tidal datum plane of the average of all the low tides, as would be established by the National Geodetic Survey at any place subject to tidal influence [from 11 AAC 53.900(16)].

**Mean lower low water.** The tidal datum plane of the average of all the low tides, as would be established by the National Geodetic Survey at any place subject to tidal influence [from 11 AAC 53.900(17)]. Mean lower low water is the "zero tide line".

**Mineral Closing Order (MCO).** All state lands are open for the prospecting and production of locatable minerals unless the lands are specifically closed to mineral entry. The Commissioner of the Department of Natural Resources may close land to mineral entry if a finding has been made that mining would be incompatible with significant surface use on state land [AS 38.05.205]. A significant surface use of the land has been interpreted by DNR to include not only residential and commercial structures, but also fish and wildlife habitat, recreational, and scenic values.

**Mineral entry.** Acquiring exploration and mining rights under AS 38.05.185-38.05.275.

**Mineral transfer facility.** Any facility or mechanism to transfer mineral resources from upland to marine waters.

**Mineral transfer site.** A site for all facilities necessary for transferring mineral resources from uplands to marine waters. A single site may contain more than one facility.

**Mining.** Any structure or activity for commercial exploration and recovery of minerals, including, but not limited to resource transfer facilities, camps, and other support facilities associated with mineral development. The term "mining" does not refer to offshore prospecting.

**Mining claim.** Rights to deposits of minerals subject to AS 38.05.185-38.05.275 in or on state land that is open to claim staking may be acquired by discovery, location and recording as prescribed in AS 38.05.185-38.05.275. The locator has the exclusive right of possession and extraction of the minerals subject to AS 38.05.185-38.05.275 lying within the boundaries of the claim.

**Minor Change.** A minor change to a land use plan is not considered a revision under AS 38.04.065. A minor change is a change that does not modify or add to the plan's basic intent, and that serves only to clarify the plan, make it consistent, facilitate its implementation, or make technical corrections. [11 AAC 55.030]
**MMBF.** Million board feet. A board foot is a unit of quantity for lumber equal to the volume of a board 12" x 12" x 1 inch.

**Multiple use.** Means the management of state land and its various resource values so that it is used in the combination that will best meet the present and future needs of the people of Alaska, making the most judicious use of the land for some or all of these resources or related services over areas large enough to provide sufficient latitude for periodic adjustments in use to conform to changing needs and conditions; it includes:

a) the use of some land for less than all of the resources, and  
b) a combination of balanced and diverse resource uses that takes into account the short-term and long-term needs of present and future generations for renewable and nonrenewable resources, including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and natural scenic, scientific, and historic values. [AS 38.04.910]

**Native owned.** Land that is patented or will be patented to a Native corporation.

**Native selected.** Land selected from the federal government by a Native corporation but not yet patented.

**Navigable.** Used in its legal context, it refers to lakes and rivers that meet federal or state criteria for navigability. Under the Equal Footing Doctrine, the Alaska Statehood Act, and the Submerged Lands Act, the state owns land under navigable waterbodies.

**NFCG.** National Forest Community Grant, the name used for state selections within national forests. These selections are authorized by Section 6(a) of the Statehood Act and are commonly referred to as National Forest Community Grant selections.

**Old Growth Forest.** Old-growth forests are ecosystems distinguished by old trees and related structural attributes. Old growth encompasses the later stages of stand development that typically differs from earlier stages in a variety of characteristics which may include tree size, accumulations of large dead woody material, number of canopy layers, species composition, and ecosystem function. To make precise determinations of what constitutes an old growth forest for particular stands, the old growth definitions outlined in "Ecological Definitions for Old Growth Forest Types in Southeast Alaska" (USFS R10-TP-28) must be consulted/used.
**Ordinary high water mark.** The mark along the bank or shore up to which the presence and action of the nontidal water are so common and usual, and so long continued in all ordinary years, as to leave a natural line impressed on the bank or shore and indicated by erosion, shelving, changes in soil characteristics, destruction of terrestrial vegetation, or other distinctive physical characteristics [from 11 AAC 53.900(23)].

**OPP or Offshore Prospecting Permit.** A permit issued by DNR giving the permittee exclusive right to explore for, and if commercial quantities are discovered, develop locatable minerals in the state's tidelands and submerged lands.

**Permanent use.** A use that is more than two years in duration requiring a state lease, easement, or right-of-way and may include a structure that is not readily removable.

**Permit.** A Department of Natural Resources authorization for use of state land according to terms set forth in 11 AAC 96.

**Personal use.** The harvest of fish and wildlife for personal consumption, including but not limited to subsistence and recreational harvest. Commercial harvest is not included.

**Planning horizon.** An indefinite planning period applying to the designations of habitat, harvest, water resources and undeveloped recreation. These designations remain valid until revised in a plan update.

**Planning period.** Refers to the 20-year period for "active" designations, including settlement, settlement-commercial, forestry, developed recreation and general use. These designations remain valid for the 20-year period from plan adoption.

**Policy.** An intended course of action or a principle for guiding actions; in this plan, DNR policies for land and resource management include goals, management intent statements, management guidelines, land use designations, implementation plans and procedures, and various other statements of DNR's intentions.

**POWIAP.** Prince of Wales Island Area Plan.

**Primary use.** See Designated use.
**Prohibited use.** A use not allowed in a management unit because of conflicts with the management intent, designated primary or secondary uses, or management guideline. Uses not specifically prohibited nor designated as primary or secondary uses in a management unit are allowed if compatible with the primary and secondary uses, the management intent statements for the unit, and the plan's guidelines. Changing a prohibited use to an allowable use requires a plan amendment.

**Public Trust Doctrine.** A doctrine that requires the state to manage tidelands, shorelands, and submerged lands for the benefit of the people so that they can engage in such things as commerce, navigation, fishing, hunting, swimming, and ecological study. (See also Chapter 3.)

**Public use.** Any human use of state land, including commercial and non-commercial uses.

**Purse seine hookoff.** Areas commonly used by commercial fishermen as purse seine hookoff points.

**Recreation.** Any activity or structure for recreational purposes, including but not limited to hiking, camping, boating, anchorage, access points to hunting and fishing areas, and sightseeing. "Recreation" does not refer to subsistence or sport hunting and fishing.

**Resource management.** A designation and classification used for lands which are presently inaccessible or remote and may have a number of resources, but where the lack of adequate resource, economic or other relevant information combined with the unlikelihood of resource development within the next 10 years makes a specific resource allocation decision unnecessary. In CSSEAP, all state lands without other designations are designated General Use and classified Resource Management.

**Resource Transfer Facility (RTF).** Any facility or mechanism necessary to transfer timber, minerals, or other resources from uplands to marine waters, including all necessary components such as log rafting and sorting areas, floating camps, etc.

**Resource Transfer Site (RTS).** A site for all facilities necessary to transfer timber, minerals, or other resources from uplands to marine waters, including all necessary components such as log rafting and sorting areas, floating camps, access ramps, etc. A single resource transfer site may contain more than one resource transfer facility.

**Retained Land.** Uplands, shorelands, tidelands, submerged lands, and water that are to remain in state ownership.
Right-of-way. The legal right to cross the land of another.

ROD. Record of Decision, in TLRMP. See TLRMP

ROS or Recreation Opportunity Spectrum. ROS is the method the USFS uses to indicate the type of recreation experience and set their management is designed to achieve for an area. For further information, please see USFS publications concerning ROS.

RTF. See Resource Transfer Facility.

Secondary use. A use of lesser importance than the primary use in a particular management unit. Secondary uses are not used in the CSSEAP.

Selective harvest. Removal of mature timber, usually the oldest or largest trees, either as single scattered trees or in small groups at relatively short intervals, commonly 5 to 20 years, repeated indefinitely, by means of which the continuous establishment of natural reproduction is encouraged and an uneven-aged stand is maintained. Selective harvesting includes both single-tree selection and group selection harvesting.

SERO. Southeast Regional Office of the Division of Mining, Land and Water, Alaska Department of Natural Resources.

Settlement. The sale, leasing, or permitting of state lands to allow private recreational, residential, commercial, industrial, or community use.

Shall. Same as "will."

Shoreland. Land belonging to the state that is covered by navigable, nontidal water up to the ordinary high water mark as modified by accretion, erosion or reliction. (See definition of Navigable.) Shorelands are generally lake bottoms or the beds of navigable rivers and streams.

Shoreline development. Any water-dependent or water-related structure or facility that is permanent and/or used for private, public, commercial, or industrial purposes. "Shoreline Development" excludes log or other resource transfer facilities, log storage, floating A-frame logging, or camps and other resource development support facilities associated with forestry or mineral development.

Should. States intent for a course of action or a set of conditions to be achieved. Guidelines modified by the word "should" state the plan's intent and allow the manager to use discretion in deciding the specific means for best achieving the intent or whether particular circumstances justify deviations from the intended
action or set of conditions. A guideline may include criteria for deciding if such a deviation is justified. (See Procedures for Plan Changes, Chapter 4.)

**Significant impact, significant effect, significant conflict, or significant loss.**
(Adapted from the ACMP statutes, AS 46.40.210). A use, or an activity associated with that use, which proximately contributes to a material change or alteration in the natural or social characteristic of the land on which:

- a) the use, or activity associated with it, would have a net adverse effect on the quality of the resources;
- b) the use, or activity associated with it, would limit the range of alternative uses of the resources; or
- c) the use would, of itself, constitute a tolerable change or alteration of the resources but which, cumulatively, would have an adverse effect.

**State lands.** All lands, including uplands, tidelands, submerged lands, and shorelands belonging to or acquired by the State of Alaska, excluding lands owned by the University of Alaska, the Mental Health Trust Authority, or by state agencies acquiring land through deed.

**State-owned land.** Land that is patented or will be patented to the state, including uplands, tidelands, shorelands, and submerged lands.

**State-selected land.** Federally owned land that is selected by the State of Alaska, but not yet patented.

**Submerged lands.** Land covered by tidal waters between the line of mean low water and seaward to a distance of three geographic miles or as may hereafter be properly claimed by the State. (See definition of Tidelands and Figure 1-1, Chapter 1.)

**Subsistence.** From the Alaska National Interest Land Conservation Act (ANILCA) [PL 96-486, Sec. 803]. The customary and traditional uses by rural Alaska residents of wild, renewable resources for direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation; for the making and selling of handicraft articles out of non-edible byproducts of fish and wildlife resources taken for personal or family consumption; for barter or sharing of personal or family consumption; and for customary trade.

**Suitable.** Land that is physically capable of supporting a particular type of resource development.

action or set of conditions. A guideline may include criteria for deciding if such a deviation is justified. (See Procedures for Plan Changes, Chapter 4.)

**Significant impact, significant effect, significant conflict, or significant loss.**
(Adapted from the ACMP statutes, AS 46.40.210). A use, or an activity associated with that use, which proximately contributes to a material change or alteration in the natural or social characteristic of the land on which:

- a) the use, or activity associated with it, would have a net adverse effect on the quality of the resources;
- b) the use, or activity associated with it, would limit the range of alternative uses of the resources; or
- c) the use would, of itself, constitute a tolerable change or alteration of the resources but which, cumulatively, would have an adverse effect.

**State lands.** All lands, including uplands, tidelands, submerged lands, and shorelands belonging to or acquired by the State of Alaska, excluding lands owned by the University of Alaska, the Mental Health Trust Authority, or by state agencies acquiring land through deed.

**State-owned land.** Land that is patented or will be patented to the state, including uplands, tidelands, shorelands, and submerged lands.

**State-selected land.** Federally owned land that is selected by the State of Alaska, but not yet patented.

**Submerged lands.** Land covered by tidal waters between the line of mean low water and seaward to a distance of three geographic miles or as may hereafter be properly claimed by the State. (See definition of Tidelands and Figure 1-1, Chapter 1.)

**Subsistence.** From the Alaska National Interest Land Conservation Act (ANILCA) [PL 96-486, Sec. 803]. The customary and traditional uses by rural Alaska residents of wild, renewable resources for direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation; for the making and selling of handicraft articles out of non-edible byproducts of fish and wildlife resources taken for personal or family consumption; for barter or sharing of personal or family consumption; and for customary trade.

**Suitable.** Land that is physically capable of supporting a particular type of resource development.
Sustained yield. The achievement and maintenance in perpetuity of a high level annual or regular periodic output of the various renewable resources of the state land consistent with multiple use. [AS 38.04.910]

SWPOWIAP. Southwest Prince of Wales Island Area Plan.

TFN. Tongass National Forest

Temporary use. A use that is one year or less in duration requiring a state permit. Any structure associated with the use must be readily removable.

Tentatively Approved. Land selected by the state of Alaska and approved for conveyance to the state from the Federal government.

Thinning. Cutting trees in a stand to decrease its density, thereby improving growing conditions for the remaining trees.

Tidelands. Lands that are periodically covered by tidal waters between mean high water and mean low water. (See Figure 1-1, Chapter 1.)

Unsuitable. Land that is physically incapable of supporting a particular type of resource development (usually because that resource doesn’t exist in that location).

Uplands. Lands above mean high water (See Figure 1-1, Chapter 1.)

Viewshed. Viewsheds are surfaces visible from a viewpoint on a road corridor or from marine waters. Viewsheds may be determined in the field by marking them on U.S. Geologic Service topographic quadrangles.

VUU. Vacant, unappropriated and unreserved land

Water-dependent. From 6 AAC 80.900(17): “water-dependent” means a use or activity which can be carried out only on, in, or adjacent to water areas because the use requires access to the water body.

Water-related. From 6 AAC 80.900(18): “water-related” means a use or activity which is not directly dependent upon access to a water body, but which provides goods or services that are directly associated with water-dependence and which, if not located adjacent to water, would result in a public loss of quality in the goods or services offered.

Sustained yield. The achievement and maintenance in perpetuity of a high level annual or regular periodic output of the various renewable resources of the state land consistent with multiple use. [AS 38.04.910]

SWPOWIAP. Southwest Prince of Wales Island Area Plan.

TFN. Tongass National Forest

Temporary use. A use that is one year or less in duration requiring a state permit. Any structure associated with the use must be readily removable.

Tentatively Approved. Land selected by the state of Alaska and approved for conveyance to the state from the Federal government.

Thinning. Cutting trees in a stand to decrease its density, thereby improving growing conditions for the remaining trees.

Tidelands. Lands that are periodically covered by tidal waters between mean high water and mean low water. (See Figure 1-1, Chapter 1.)

Unsuitable. Land that is physically incapable of supporting a particular type of resource development (usually because that resource doesn’t exist in that location).

Uplands. Lands above mean high water (See Figure 1-1, Chapter 1.)

Viewshed. Viewsheds are surfaces visible from a viewpoint on a road corridor or from marine waters. Viewsheds may be determined in the field by marking them on U.S. Geologic Service topographic quadrangles.

VUU. Vacant, unappropriated and unreserved land

Water-dependent. From 6 AAC 80.900(17): “water-dependent” means a use or activity which can be carried out only on, in, or adjacent to water areas because the use requires access to the water body.

Water-related. From 6 AAC 80.900(18): “water-related” means a use or activity which is not directly dependent upon access to a water body, but which provides goods or services that are directly associated with water-dependence and which, if not located adjacent to water, would result in a public loss of quality in the goods or services offered.
**Wetlands.** Includes both freshwater and saltwater wetlands. "Freshwater wetlands" means those environments characterized by rooted vegetation which is partially submerged either continuously or periodically by surface freshwater with less than .5 parts per thousand salt content and not exceeding three meters in depth. "Saltwater wetlands" means those coastal areas along sheltered shorelines characterized by salt tolerant, marshy plants and large algae extending from extreme low tide which is influenced by sea spray or tidally induced water table changes.

**USFS.** United States Forest Service, a division of U.S. Department of Agriculture.

**USFWS.** United States Fish and Wildlife Service.

**Will.** Requires a course of action or a set of conditions to be achieved. A guideline modified by the word "will" must be followed by land managers and users. If such a guideline is not complied with, a written decision justifying the noncompliance is required.
APPENDIX B

MINERAL CLOSING ORDER

STATE OF ALASKA
DEPARTMENT OF NATURAL RESOURCES
DIVISION OF MINING, LAND AND WATER

ADMINISTRATIVE MINERAL CLOSING ORDER NO. 747

X Closing Lands to Mineral Entry _______ Opening Lands to Mineral Entry

I. Name: Central/Southern Southeast Area Plan

II. This mineral order is based upon the attached Commissioner's Finding and the written documentation contained in:

   Area Plan: _______________________________ Dated: ________________
   Management Plan: ___________________________ Dated: ________________
   Site Specific Plan: __________________________ Dated: ________________

III. File Number Legal Description Acreage

   See Attachment B and maps in the Central/Southern Southeast Area Plan 5,451.7 acres

IV. This order is subject to valid existing rights and issued under the authority granted by AS 38.05.185 - 38.05.275 to the Department of Natural Resources. The above described lands are hereby X closed/ _____ opened to entry under the locatable mineral and mining laws of the State of Alaska.

Concur: ________________________________ Nov 1, 2000

Bob Loffle
Director
Division of Mining, Land and Water

Concur: ________________________________ Nov 1, 2000

Commissioner
Department of Natural Resources
CENTRAL/SOUTHERN SOUTHEAST AREA PLAN
FINDING OF THE COMMISSIONER
FOR ADMINISTRATIVE MINERAL CLOSING ORDER #747
As 38.05.185(a)

The Central/Southern Southeast Area Plan, developed in accordance with AS 38.04.065, proposes closing areas recommended for settlement and areas recommended for inclusion in the state marine park system. Approximately 4,095 acres are to be closed to mineral entry in areas recommended for part use and 1,346 acres in areas recommended for residential settlement.

Mineral development is inconsistent with the use of the surface for residential settlement or for park use. Mineral development within settlement or park areas may produce noise, interfere with settlement and park activities, conflict with other types of land uses and create unsafe conditions for residential or park use.

Therefore, it is my finding, in accordance with AS 38.05.185(a), that the best interests of the state and its residents are served by this closure of the above areas to entry under the locatable mineral and mining laws of the state of Alaska, more particularly described in Mineral Closing Order #747. This order is subject to valid existing rights.

Alaska Department of Fish and Game Wildlife Bibliography

Value Comparison Units that are the top salmon producers and sport fishing areas in southeast Alaska

Sea Lion and Harbor Seal haulouts and concentration areas, black and brown bear spring and fish stream concentration areas, waterfowl and shorebird spring and fall concentration areas, seabird nesting colonies, trumpeter swan wintering areas, and osprey foraging and nesting areas,

Eulachon spawning and concentration areas, Pacific herring spawning and winter concentration areas, starry flounder rearing concentration areas, starry flounder harvest areas, rockfish harvest areas, Dungeness, King and Tanner crab commercial harvest areas and pot shrimp and trawl shrimp commercial harvest areas.

Locations of the top wildlife viewing areas in Alaska with a description of the area's resources.

Locations of herring spawning areas.

Alaska Department of Fish and Game, 1998 Draft. Oil Spill Contingency Planning: Most Environmentally Sensitive Areas (MESAs) along the Coast of Alaska, Volume II. 
Fish and wildlife concentration areas on the Stikine River flats, pink and chum salmon peak and average escapements throughout the planning area.
   Important sport fishing areas for salmon and halibut.

   Sites and routes used for subsistence and sport hunting, trapping, commercial fishing, non-consumptive use of fish and wildlife, and wildlife viewing. Day trip and multi-day trip routes for tourism-related wildlife viewing.

Alaska Department of Fish and Game, 1997. Southeast Sub-area Contingency Plan for Oil and Hazardous Substance Spills and Releases.
   Locations of fish and wildlife concentrations at the mouth of the Stikine River.

Alaska Department of Natural Resources, Etolin Island Area Mariculture Pilot Project.
   Pacific herring wintering concentration and spawning areas, bald eagle nests, waterfowl and shorebird spring and fall concentration areas, osprey summer foraging areas, kelp beds, mink and otter high density areas, harbor seal and sea lion haulouts and concentration areas, black bear spring and salmon stream concentration areas, salmon harvest areas by gear type, shrimp harvest areas by gear type, Dungeness and tanner crab commercial harvest areas, potential geoduck harvest areas, waterfowl harvest areas and marine day-use sport fishing areas.

   Local knowledge of commercial fishing harvest areas and herring spawning concentration areas throughout the planning area.

   Local knowledge of humpback whale and orca concentrations and feeding behavior, groundfish harvest areas.

   Sensitive biological resources including Pacific herring and eulachon spawning areas, osprey use areas, eagle nests, seabird nesting colonies, shorebird and waterfowl concentrations; sea otter, Steller sea lions, harbor seals and black and brown bear concentrations. Human use of biological resources including shrimp, Dungeness, tanner and king crab fishing areas; subsistence areas for salmon and invertebrate and intertidal gathering; commercial and sport fishing areas for herring, eulachon, and salmon and groundfish areas.
Local knowledge of parcels fish and wildlife values, resource use and sensitivity to
development.

Local knowledge of parcels fish and wildlife values, resource use and sensitivity to
development.

Local knowledge of parcels wildlife values, use and sensitivity to development.

Computerized maps of the project area identifying features including slope gradient,
timbered areas by volume class, non-forested lands, clear-cuts, roads, trails, lakes,
and locations and gradients of streams.

Local knowledge of wildlife concentrations and herring spawning areas.

Timber Sale Contract, North and East Kuiu Final Environmental Impact Statement.
Subsistence use areas, fish and wildlife concentration areas.

Critical and high-value deer winter range, high value marten habitat, wildlife habitat
conservation areas, location of logged-over lands, timber volume-class, planned and
existing roads, trails and other recreation projects, moose management strategy, and
goshawk nest/management areas.

sale Project, Revises DEIS.
Fish, wildlife and shellfish concentration areas and commercial fishing areas in the
Port Houghton to Faragut Bay area.

Tongass National Forest.
Locations of public cabins administered by the USFS, access to the cabins and
trails, local fish and wildlife resources and use of resources near cabins.

U.S. Dept. of Agriculture, Forest Service. 1997. Tongass Land Management Plan Revision,
Final Environmental Impact Statement.
Location and description of land use designations. Locations and descriptions of
areas managed as research natural areas; wild, scenic and recreational rivers, old-
growth habitat areas.
   Final old-growth reserve strategy, selection of wild, scenic or recreational rivers.

   Description of resources on parcels, critical and high-value deer winter range, other wildlife habitat, old-growth habitat strategy, soil stability, volume-class of timber, location of existing clearcuts, planned and existing roads, trails and other recreation projects.

   Locations of seabird colonies.
