Chapter 3

Land Management Policies for Each Management Unit

Introduction

This chapter presents specific land management policy for state uplands and shorelands within the planning area. Information on state lands is organized by region, of which there are four: Lower Tanana, Kantishna, Parks Highway and West Alaska Range, and one region that includes all of the Legislatively Designated Areas within the plan boundary. These regions are the same as the 1985 plan (updated in 1991) except that a number of townships in the Parks Highway and West Alaska Range Region were dropped and a large area in the Lower Tanana Region has been added south of the Yukon River. Both changes have resulted from the adjudication of state selections by the Bureau of Land Management. In 1985, large areas in the Parks Highway and West Alaska Range region were in state selection status but these have since been relinquished by the state and are retained federal land, while the areas south of the Yukon River have resulted from the adjudication of state selections and the conveyance of federal land to the state. The latter area is by far the more significant of the two boundary changes, adding 2,250,061 acres to the planning area. In the southern part of the planning area, the external boundary generally follows the corporate boundary of the Denali Borough. No such correspondence exists for the northern area, where the North Star Borough occupies only a portion of the northern part of the planning area, and the northern boundary is formed by the Yukon River. The Denali National Park and Preserve is located south of this planning area, and is within the planning area of the Yukon Tanana Area Plan.

Map 3-1 shows the planning area and regions and 2011 land status.

Within the planning area there are approximately 11 million acres of state uplands; this estimate also includes the areas of state shorelands. Significantly, nearly 1 million acres of this total are associated with Legislatively Designated Areas (LDAs), which includes the TVSF, James Dalton, and the Minto Flats State Game Refuge LDAs. The three LDAs total 919,929 acres within the planning area. Generally, area plans do not apply to LDAs, with management direction for such areas being provided through enabling legislation and management plans specific to the LDA, although area plans classify these areas in order to enable certain types of authorizations to be issued. This plan's recommendations primarily apply to the remaining areas of state owned land and state selected land within the planning area that make up about 10 million acres within the three main regions, and their 274 management units. Most of this state land has been either tentatively approved or patented to the state (8 million acres), and the state exercises its management authorities over this land. However, extensive areas of state selections (2 million acres) exist within the planning area, with much of this associated with the Fort Wainwright Military Reservation in the Parks

Highway and West Alaska Range Region. Other areas with selection concentrations include the area occupied by the Clear Air Force Base near Anderson and the mountainous terrain in the southeastern part of the Parks Highway and West Alaska Range Region. Within the Kantishna Region, selections occur in areas near the Denali Park and Preserve and in some of the mountainous terrain within the Bitzshini Mountains. It is unclear how much of this selected land the state will receive and this will not be known until the adjudication of the remaining selections of both the state and Native corporations are finalized by the BLM, and this is not expected for some time. The state exercises ANILCA 906(k) authority over the area of federal land affected by state selections.

The management requirements of this area plan do not apply to non-state lands, which includes, in the context of this plan, University of Alaska lands, Mental Health Trust Authority lands, and other state owned lands directly administered by the ADOT/PF and ADF&G.

Organization of Chapter

The chapter is organized into the following sections:

- *Land Use Designations*, which describe the general management direction for specific parcels of state land.
- *Management Intent*, which consists of an explanation of how specific units of state land are to be managed. Management intent language gives additional specificity to the general management direction provided by the land use designations.
- *Plan Duration and Flexibility*, which indicates the planning period and requirements for plan amendment.
- *Regional Setting*.
- *Regional and parcel specific management* direction for state land.

Land Use Designations

A land use **designation** recognizes uses or resources that are of major importance in a particular management unit. Unit designations are based on current and projected future use patterns and the most significant resources identified in each unit. DNR will manage activities in the unit to encourage, develop, or protect the uses or resources for which the unit is designated. Plan designations are more specific than the land use classifications required under 11 AAC 55.040, and such designations are converted to land use classifications, as required by 11 AAC 55.020. DNR will manage state land according to these designations and according to the equivalent land use classification.

Map 3-1: Planning Area, Regions and Land Status

When the plan assigns a designation to a unit, the designation is accompanied by region-wide management guidelines and by management intent specific to that unit. These three pieces of information – designations, management guidelines, and statement of intent – must be taken into consideration in determining how a parcel of state land is to be managed and in making disposal and authorization decisions.

Primary designated use. Most management units are assigned a primary designated use (versus units designated General Use), which indicates, in a general way, how state land is to be used and managed. Primary designated uses shall take precedence over other uses. Generally, however, DNR allows multiple uses. DNR initially presumes that all other uses are compatible with the primary use. However, if DNR determines that a use conflict exists and that the proposed use is incompatible with the primary use, the proposed use should not be authorized or it should be modified so that the incompatibility no longer exists (from 11 AAC 55.040 (c)). The plan may assign a designation to ensure a future use that will best serve the public interest, even if that use is not imminent.

Co-designated use. Where a unit has two or more designated uses, DNR will avoid or minimize conflicts between designated uses by applying the management intent statement and guidelines for the unit, the regional intent, and the Chapter 2 guidelines from this plan together with existing statutes, regulations, and procedures. Only those co-designations that are generally complementary to or compatible with each other are included in this plan. Co-designated uses should, therefore, be viewed as compatible unless specific conditions that exist at the time the Department is evaluating whether to grant an authorization indicate otherwise. In this plan, co-designated uses are often Habitat and Public Recreation or Minerals/Coal and Habitat. Within areas designated Minerals/Coal and Habitat, mining or coal exploration and development are considered to be appropriate uses, but exploration and development projects must consider their potential impacts upon sensitive wildlife, fisheries, an habitats, and must either avoid or mitigate these impacts.

Designations Used in This Plan

Ag – Agriculture. Land that is agricultural or that, by reason of its climate, physical features, and location, is suitable for present or future agricultural cultivation or development and that is intended for present or future agricultural use. This designation converts to a land use classification of Agriculture Land. Land designated Agriculture may be conveyed out of state ownership to individuals or other entities.

Co – Coal. Areas considered to have coal potential and for which coal mining is considered to be an appropriate use, are designated Coal. See the “Explanation of Mineral and Coal Designations” at the end of this list of designations. This designation converts to a land use classification of Coal Land. Areas designated Coal are to be retained in state ownership, although coal leases (or other forms of authorizations) are recognized as appropriate.

F – Forestry. Land that is or has been forested and is suited for long-term forest management because of its physical, climatic, and vegetative conditions. This land will remain in state ownership. Approving authorizations in these areas will be conducted in compliance with the Forest Resources and Practices Act (AS 41.17 and 11 AAC 95) and the specific management guidelines in the Forestry section of Chapter 2. This designation converts to a land use classification of Forest Land. Forest Land is to be retained by the state, although timber sales are recognized as appropriate.

Gu – General Use. Land that contains one or more resource values, none of which is of sufficiently high value to merit designation as a primary use, or, because of the size of the parcel, a variety of uses can be accommodated with appropriate siting and design controls. General use may also apply where there is a lack of resource, economic, or other information with which to assign a specific land use designation, and/or the lack of current demand implies that development is unlikely within the planning period. This designation converts to a land use classification of Resource Management Land. Areas designated General Use may be conveyed to municipalities, but must be reclassified to Settlement prior to disposal to individuals. In certain instances areas designated General Use may be retained in state ownership; when this occurs, it is noted.

Ha – Habitat. This designation applies to areas of varied size for fish and wildlife species during a sensitive life-history stage where alteration of the habitat or human disturbance could result in a loss of a population or sustained yield of a species or that contain a unique or rare assemblage of a single or multiple species of regional or statewide significance. Land designated Habitat is intended to remain in state ownership, and is to be maintained in an undisturbed, natural state except for improvements related to public health, safety, habitat restoration or rehabilitation, and public recreation. Utilities and roads may be appropriate with appropriate design if habitat functions can be maintained. Authorizations within areas designated Habitat are to be considered inappropriate unless consistent with these stipulations and with the management intent for the management unit. This designation converts to a land use classification of Wildlife Habitat Land.

Hr – Heritage Resources. This designation applies to land where there is active preservation of, or research for, significant historical, prehistoric, paleontological, or other cultural values, or where there is a reason to believe that these values exist.

Ma – Materials. Sites suitable for extraction of materials, which include common varieties of sand, gravel, rock, peat, pumice, pumicite, cinders, clay, and sod. This land will remain in state ownership until the material on the site is no longer required for state purposes (such as road construction and maintenance, materials storage, and public or state facilities) after which these lands may be used for alternative purposes. See the Resource Allocation Tables to identify the types of uses that might be appropriate to a specific parcel. These lands cannot be sold and cannot be used for an alternative use without re-designation of the area plan and reclassification, although some sites may be suitable for other uses after material resources are exhausted. This designation converts to a land use classification of Material Land.

Mi – Minerals. Areas considered to have mineral potential and for which mining is considered to be an appropriate use, are designated Mineral. See the “Explanation of Mineral and Coal Designations” at the end of this list of designations. This designation converts to a land use classification of Mineral Land. Land designated Minerals is to be retained in state ownership, except as may be provided for under AS 38.05.195-.275.

Pr – Public Facilities-Retain. These sites are reserved for specific infrastructure to serve state interests. This may include areas intended as open space or to function as riparian buffers. Units designated “Public Facilities-Retain” will be retained in state ownership. This designation converts to a land use classification of Reserved Use Land.

Pt – Public Facilities-Transfer. Areas with this designation are intended to be conveyed out of state ownership for some type of public purpose. This designation converts to the designation of Settlement Land since the Reserved Use Land designation is not conveyable under the Municipal Entitlement program.

Rd – Public Recreation-Dispersed. This designation applies to those areas that offer or have a high potential for dispersed recreation or tourism and where desirable recreation conditions are scattered or widespread rather than localized¹. Developed facilities are generally not necessary other than trails, trail signs, primitive campsites, and other minor improvements. This land will be retained in public ownership in an undisturbed, natural state except for improvements related to public health, safety, or recreation. Authorizations within areas designated Public Recreation-Dispersed are not to be considered appropriate unless necessary for public health, safety or recreation. Utilities and roads may be appropriate with appropriate design if recreation functions can be maintained. This designation converts to a land use classification of Public Recreation Land. Areas designated Public Recreation-Dispersed are to be retained in state ownership except that such areas may be conveyed to municipalities under AS 29.65 or as may be provided for in the management intent for specific units.

Se – Settlement. This designation applies to state uplands suitable for sale, leasing, or permitting to allow private recreational or residential use. This designation will generally be used for areas appropriate for land offerings for residential uses. Unsettled or unsold land in the unit will be managed for uses compatible with settlement. This may include uses such as selling additional lots, laying out new subdivisions, identifying greenbelts through subdivisions, reserving materials sites for subdivision roads and building lots, placing easements on access routes, or reserving lots for community facilities and open space. Areas designated Settlement should be closed to mineral entry prior to sale, and, in this plan, a leasehold location order is recommended to be imposed on areas not yet affected by a current mineral closing order. This land may be conveyed to municipalities and individuals. This designation converts to a land use classification of Settlement Land.

¹ Uses that typically occur within areas of dispersed recreation are those associated with Generally Allowed Uses under 11 AAC 96.020.

Wr – Water Resources. This designation applies to areas of important water sources, watersheds, or hydropower sites. In this plan it also includes important wetland areas, the intent of which is to maintain these in an undisturbed, natural state. It is intended that this type of land will be retained in state ownership in an undisturbed, natural state. Authorizations within areas designated Water Resources are not to be considered appropriate unless necessary for public health and safety. Utilities and roads may be appropriate with appropriate design if wetland and water resource functions can be maintained. This designation converts to a land use classification of Water Resource Land.

Explanation of Mineral and Coal Designations

Except where state land is closed to mineral entry or to coal leasing, DNR will treat mining or coal extraction as if it is compatible with the principal surface use. This is important to note because DNR area plans usually do not apply mineral resource designations to large areas, although in this plan significant areas are affected by the co-designation of Habitat and Coal/Mineral. Chapter 2, *Subsurface Resources*, also includes additional guidelines and a summary of statutes regulating mining and reclamation activities.

Management Intent

The plan provides management intent for both the resources and types of authorizations that are expected to occur within the planning area as well as for specific management units. Management intent essentially describes how the Department intends to manage a resource or management unit and may both describe what is intended to occur as well as what is not intended to occur. It may also specify specific management direction. Also, the plan can provide management guidance for a resource without designating it. For example, the plan may address the resource by providing management intent for a specific area or through areawide guidelines. In addition, other state, federal, or local regulations will determine the conditions for using undesignated resources.

In some cases, the management intent for a unit discourages specific uses because these uses may create conflicts with designated uses. **Discouraged uses** may be allowed if DNR determines that the use does not conflict with the management intent, designated uses, and the management guidelines. Discouraged uses include activities that should not be authorized or will not be allowed if there are feasible and prudent alternatives. If DNR determines that the discouraged use conflicts with the management intent or designated uses, and cannot be made compatible by following the management guidelines, DNR would allow it only through a plan amendment.

In some cases the plan may also identify **prohibited uses**. These are uses that have significant conflicts with other uses or resources and will not be permitted without a plan amendment. Prohibitions are rare, because the plan seeks to minimize land use conflicts through plan guidelines and intent rather than through prohibitions.

Management intent statements for each unit refer only to state management of state land. While these statements accommodate certain proposed uses on state lands, there is no guarantee that other regulatory agencies will issue permits necessary for the proposed use. All proposed development uses referenced in the management intent statements are assumed to employ best management practices in siting and operating the proposed use.

Disposal or Retention in State Ownership. Certain land use classifications, by statute, allow land to be conveyed to municipalities under the municipal entitlement program². The same statute identifies those land classifications that may not be conveyed to such entities.³ Another portion of statute (AS 38.04.015) identifies the general public interests in retaining areas of state land in public ownership. These principles were applied in developing the recommendations for the retention of state land that are identified for specific management units.

In this plan, the land use designation is the general indicator of whether land should be retained in state ownership or made available for disposal. In general, units designated Habitat, Water Resources, Public Facilities-Retain, Forestry, Coal, Minerals, and Public Recreation are intended to be retained in state ownership. Units designated Settlement, Public Facilities-Transfer, or Agriculture are considered appropriate for disposal. Units designated Materials, General Use, or, sometimes, Public Recreation, may be appropriate for conveyance out of state ownership under certain conditions. In addition, units already under management agreements with other state agencies are usually not available for conveyance. Shorelands must also be retained in state ownership unless law requires conveyance or the conveyance is to a political subdivision of the state, and such conveyances are subject to the Public Trust Doctrine, described at the end of this chapter. Finally, the Mineral Estate must always be retained by the state; the only exception being conveyances to other state agencies or entities.

There are some units with management intent that precludes disposal, although the designation and classification might otherwise allow it. When this occurs, this restriction is noted in the management intent statement specific to the management unit in the Resource Allocation Table. This includes units already under management by another state agency or that contain certain unique or sensitive uses or resources that merit retention by the state.

² The Municipal Entitlement of the North Star Borough has already been fulfilled and no additional land is owed that entity under AS 29.65. Most of the municipal entitlement of the Denali Borough has also been fulfilled, with only about 9,000 acres remaining. This plan includes recommendations that affect the adjudication of the remaining entitlement.

³ AS 29.65.130 identifies those land use classifications that permit conveyance under the Municipal Entitlement Act. This statute is specific to municipal entitlement conveyances, but in a more general sense, in this area plan, the designations of General Use, Agriculture, Public Facilities-Transfer, and Settlement are considered appropriate for the conveyance of lands out of state ownership. These convert to the classifications of Resource Management, Agricultural, and Settlement Land.

Shorelands. DNR will provide reasonable access across state shorelands to upland owners. Upland access across state shorelands, including developed access facilities, may be allowed within all land use designations where DNR determines the proposed facilities are consistent with the management intent and applicable guidelines of the plan. However, state shoreland designations do not give the public access rights to adjacent private uplands. ADF&G Habitat Division requires a Fish Habitat Permit if the shorelands are within an anadromous or potentially anadromous stream.

Management Guidelines

Most state lands will be managed for multiple uses. Exceptions are lands that will be offered for private lease or ownership, recreation sites that are less than 640 acres, and certain other areas that have unique habitat or public recreation values. When used, management guidelines specify requirements for the use of or development within a management unit. Apart from this, the plan establishes management guidelines in order to allow various uses to occur without serious conflicts. Management guidelines can direct the timing, amount, or specific location of different activities to make the permitted uses compatible. For example, the plan provides guidelines that require that land disposals must be designed to protect public access and recreational opportunities, while still permitting the land to be conveyed out of state ownership.

Duration and Flexibility of Plan

This plan guides land uses for the **next 20 years or until revised**, subject to periodic reviews, for areas with designations involving settlement, industrial or commercial uses, or other forms of economic uses including material extraction or uses related to community or recreational development. Designations related to habitat, public recreation (dispersed), forestry, minerals, coal, and water resources do not have a specific planning horizon. The area plan is intended to guide the management of land within the latter areas until the plan is formally revised. In some instances, areas designated General Use may not be appropriate for development within the planning period and, if so, this is indicated in the management intent language.

The land use designations shown on the maps in this chapter are intended to be flexible. DNR may permit uses not originally designated if DNR determines they are consistent with the management intent for the unit and consistent with applicable management guidelines.

Boundaries of land use designations shown on the following maps may be modified through implementation activities, such as site planning or disposal, as long as modifications adhere to the intent of the plan and follow the procedures described in Chapter 4 under the section *Type of Plan Changes*.

Glossary

Definitions of terms used frequently in the plan are found in the *Glossary, Appendix A*.

Plan Structure

Plan Regions

The planning area, consisting of 16,600,000 million acres, is divided into three principal regions and one region that includes land within Legislatively Designated Areas (LDAs). Regions are typically large geographic areas characterized by lands contiguous to each other and that have are located within a distinctive geographic area. The three main regions contain state owned and state selected land, which is the primary focus of area plans. These are the same regions as used in the 1985 plan, although there have been some amount of modification to exclude areas that had been selected by the state but have since been dropped by the state from consideration and to include areas that were federal land at the time of the development of the original plan but have since been conveyed to the state or have been selected by the state for potential conveyance.

The three principal regions are: Kantishna, Lower Tanana, and Parks Highway and West Alaska Range. The Kantishna Region, generally occupying the area of the Kantishna drainage west of the Nenana River and south of the Tanana River, consists of 3,058,441 acres and is further divided into 76 management units. The Lower Tanana Region, generally occupying lowlands west of the Fairbanks North Star Borough and includes the Minto Flats State Game Refuge, the area immediately north of the Yukon River and the Tanana River on the south, consists of 3,059,415 acres and contains 99 management units. The last major region, Parks Highway and West Alaska Range, consists of both extensive lowlands as well as mountainous terrain situated south of the Tanana Valley State Forest, and consists of over 3,502,811 acres and contains 99 management units. The plan provides plan designations, management intent, and, sometimes, management guidelines for each of the management units in the three regions.

The Parks Highway and West Alaska Range region contains the Fort Wainwright Military Reservation. Area plans must provide management guidance for federal land that is selected by the state for potential conveyance in fulfillment of the state's land entitlement from the federal government, and the Military Reservation is covered by a state selection. This selection would only come into play if and when the military vacates the reservation, which is not likely to occur during the planning period, and would only occur after the adjudication of the selection by the BLM and the determination that such a conveyance is appropriate. These same considerations apply to the Clear Air Force Base, which is located near Anderson.

The last region encompasses all or portions of the three LDAs within the planning boundary, which are located in the Lower Tanana region: the Tanana Valley State Forest, the Minto Flats State Game Refuge, and the James Dalton Legislatively Designated Area. In these instances, the plan does not provide management guidance other than to provide a plan designation, which is required in the event that the Department needs to issue leases or other authorizations that constitute disposals of state land since state land must be classified before it can be conveyed out of state ownership. Map 3-1 in this Chapter depicts the plan boundary, the three principal plan regions, and the Legislatively Designated Areas (which constitute a region).

Management Units

In this plan, areas of state uplands and shorelands that have been separated into smaller geographic units called management units. State resource management is specific to this level. Management units⁴ may be large or small but usually have generally similar attributes; or they may be specific legal units like a tract within a residential subdivision; or they may be a discrete area of state land affected by a management agreement that is to be administered for a public purpose, like a port, vehicle storage facility, or airport.

All units have a discrete identifying number (i.e., unit number). These are depicted on the plan maps and are included in the Resource Allocation Table. This number provides a cross-reference between the plan maps and the tables containing information about the parcel. The Table contains information on the resources found within the unit as well as plan designation, management intent, and, if required, management guidelines.

Unit numbers are preceded by an alpha character that represents a particular place or area, with the following convention being applied: ‘P’ represents the Parks Highway and West Alaska Range; ‘K’, Kantishna; and ‘T’, the Lower Tanana region. ‘L’ is used for the Legislatively Designated Areas because they are located in the Lower Tanana region.

A specific convention is used to identify the various types of upland units; these have a geographic identifier (a single alpha character that represents an area) followed by a two-digit identifying number. For example, a parcel in the Kantishna region has the identifying number “K-01.”

Region Descriptions

The regions are described in this section of the plan. These descriptions are necessarily generalized and indicate only the general features or characteristics of an area and only give an overview of how the region is to be managed by the Department. In addition, there is a short description of the somewhat unique region that pertains to Legislatively Designated

⁴ Management units are also sometimes referred to as “units” or “parcels” in this plan.

Areas (LDAs). Because management intent for LDAs is established by legislation, information is necessarily limited and does not follow the following convention. Included in these descriptions for the major region are the following:

Background: This component provides a description of the planning boundaries and related geographic information.

State Lands: The distribution of state lands within the region is explained.

Physical Features: The general topography of the upland tracts is described.

Resources and Uses: The current uses of state land as well as their resources are described in the management unit. Resources and uses include descriptions of recreation uses, settlement, habitats, water resources, minerals, coal, and timber resources, if present.

Access: The principal mode(s) of access to state uplands are usually identified.

Management Constraints and Considerations: Local, state, and federal land and resource plans affecting the management unit are identified, if considered important to future decision making.

Management Intent (Management of State Land): This section describes the general way that state land is to be managed within the region. These provide a more detailed description of how the region is to be managed than can be provided by the plan designations that affect the units in the region. The plan designation and management intent, and any management guidelines that may apply, must be considered on a comprehensive basis in order to discern the overall management direction and any considerations that may be of particular importance in future adjudication decisions within the region. Note: *Specific management direction is contained in the Resource Allocation Tables.*

Plan Maps

There are 11 plan maps that cover the Yukon Tanana Area Plan⁵. See Map 3-1 to locate the map for a particular area. These maps indicate the plan boundary (external boundary of the area plan), the boundaries of the four regions, and the boundaries of the individual management units.

The plan maps also show land ownership, unit numbers, and plan designations. It should be reemphasized that while the land use designations provide the general management intent for each unit, management intent and guidelines (both management unit and areawide) must be considered for a complete explanation of the management policy and requirements affecting

⁵ An additional four maps cover the area of the Parks Highway corridor in the Parks Highway and West Alaska Range region.

particular units. This is essential in order to get a comprehensive understanding of the management intent contained in the area plan as it pertains to a specific unit. The management intent and guidelines contained in Chapter 2 are particularly critical and must be consulted in adjudication decisions affecting individual parcels of state land.

Land Status Depicted In Plan Maps

The maps in this chapter are not intended to be detailed land ownership maps. Instead, they are a representation of state and federal land records current to the date of plan preparation. Land status for upland parcels, including private, Native corporation, municipal, and federal land are derived from the Department's Geographic Information System (GIS) land status coverage. This information is generalized and for this reason the land status for a particular land area can be misleading. For complete information, consult the land records of the Department of Natural Resources, federal Bureau of Land Management, Native corporations, and the Denali and North Star Boroughs. Because of the presence of Mental Health Trust Land and University land, it is also necessary to consult these entities at times.

The plan maps show general patterns of land ownership by color. This includes the various types of state land (general state land, Legislatively Designated Areas, Mental Health Trust Land, University of Alaska, and lands under management agreement to another state agency) as well as Borough and private lands. However, because of the way that GIS maps are created, which entails a decision hierarchy on what land status to represent in priority sequence, the colors that represent an ownership pattern may not coincide with the actual pattern of such ownership. The Department has tried to make general land status on the plan maps as accurate as possible, but the ownership patterns of other entities may be incorrect.

The location of state-owned or state-selected parcels is derived from information in the Department's land status records and the federal Master Title Plat. Both the status and spatial boundaries of these parcels are accurately represented at the time of plan preparation (2012). However, because state land status changes with time, the same caution exists for these areas as for areas of non-state land. Both color and a distinct external boundary line indicate areas of state and state-selected land. If there is a conflict between the land status depicted by color and that indicated by a boundary line, the boundary line is correct. This line supersedes the color representations of land ownership.

Resource Allocation Table

Resource Allocation Tables provide information on specific parcels and are related to the plan maps through the unit number. The table includes the land use designation and the land management intent for each specific upland or tideland units. Essentially, the Tables detail the generalized description of state management intent included under the regional "Management Summary" for specific management units.

The tables are organized by Region and for each unit it gives the unit identification number; 1985 classification; location by Township and Range; and size expressed in acreage. Also included is a description of the resources and uses of a parcel, the designation(s), management intent, and management guidelines.

More specifically, the policies and resource information contained in the tables include:

Unit number: Each parcel of state land has a unit number. Units are preceded with a letter indicating the region that they are situated within; see previous description of Management Units.

MTRS: The Meridian, Township, Range, and Section (MTRS) of each parcel are indicated. In all cases the Fairbanks Meridian applies. There may be more than one township and range when a parcel crosses township and/or range boundaries. Similarly, when the parcel encompasses more than one section, typical for some tracts, the affected sections are identified. The only exception to this convention is for the very large tracts associated with Forestry, General Use, Coal, Minerals, Settlement, and Habitat designations; in these instances, only townships and range are given.

Acreage: The approximate acreage in each unit is indicated.

Plan Designation: Land use designations indicate the primary and, if appropriate, co-primary uses and resources for each unit. Although most units are only affected by a single designation (primary), two compatible plan designations (termed “co-designations”) are sometimes specified. Where co-designations have been used, the uses reflected in the designations are generally compatible and complementary to each other.

Management Intent: This column indicates the management direction for a specific parcel. It is consistent with the recommended designation, but includes more information on how state land is to be managed. In some small-sized parcels, the management intent is likely to be brief since the designation itself is often sufficient to indicate the management intent. This is not usually the case with sensitive parcels or large parcels, and, in these instances, the management intent statement is critical to an understanding of how the various resources within the parcel are to be managed. This section may also indicate if the parcel is to be retained in state ownership or if it is appropriate for transfer to a city, borough, non-profit entity, or the public. (See the discussion on p. 3-9 which relates plan designations to determinations to retain or dispose of state land for more detail.) It often also describes those parcel resources that must be taken into consideration in land disposals, coal or mineral development, or other forms of development or use. In some instances the development of a parcel is not appropriate during the planning period and, when this occurs, this is also stated. This is usually associated with units affected by the General Use designation since these units are often located in remote, inaccessible locations and their development is not considered likely or appropriate during the planning period.

Resources and Uses: This column summarizes the resources and uses for which the unit is designated and which are considered important in the unit. It also provides a generalized physical description of the unit, and may indicate the presence (or absence) of certain other resources that are important to land management decisions. Typical among this type of information is whether the parcel contains a heritage or cultural site, a significant concentration of wildlife or habitat, the current use of the parcel, the presence of RS 2477 routes, adjacent land ownership, and whether a state or local land use plan affects the unit.

Lower Tanana Region

The Lower Tanana Region encompasses an area of over 5,136,500 acres and is situated in the northern part of the planning area. It encompasses the area, generally described, in east-west orientation, between the White Mountains National Recreation Area and the Nowitna National Wildlife Refuge. It shares portions of its southern and eastern boundaries with the Fairbanks North Star Borough, although the region is not located within a borough. The southern boundary of the region abuts the Kantishna sub-region. The region encompasses sections the Yukon River to the north, the Tanana River centrally to southeast, in addition to numerous smaller rivers, creeks, and lakes. Portions of the Tanana Valley State Forest and the Minto Flats Game Refuge are located in the southern and southeastern areas of this sub-region. This region and the proposed management units are depicted on maps 3-2a, 3-2b, and 3-2c.

This region has multiple routes of access including the Elliot Highway, which generally parallels the Tanana River, and the Dalton Highway, which transverses the region generally in a north-south direction through the eastern area of the planning area. An approximately 80 mile section of the Trans-Alaska Pipeline System also transverses the eastern area of the region and loosely parallels the Elliot Highway in the southeast and then the Dalton Highway, beginning in the Livengood area. There are also numerous RS 2477 Trails throughout the region.

There are four small, communities within this area, which are situated along the Elliot and Dalton Highways. The communities include: Tanana, Manley Hot Springs, Minto and Livengood. The population of Livengood has been steadily increasing due to an expansion in the mining industry surrounding the community over the past few decades.

Distribution and Characteristics

This size of this region was nearly doubled in this plan by an expansion to the north to encompass land that has been conveyed to the state over the past twenty-five years. Land ownership is mixed throughout this region and includes state land, private land, Mental Health Trust land, Native land, Native allotments, and Federal land (nearly all of which is in state selection status). Native owned land is generally located near major waterbodies, roads and communities and accounts for 1 million acres. Livengood is surrounded by Mental Health Trust Land, which accounts for 31,000 acres. State land and state selected land are distributed throughout the area and make up 3,300,000 acres and 415,000 acres respectively. Private land, derived from land disposals and agricultural disposals comprise 76,000 acres. The remainder of the land is federally owned, 522,000 acres, located in the southwestern area of the region.

The area in and around the smaller communities of this region have experienced some growth over the last 25 years, reflecting the presence of infrastructure and the accessibility provided, particularly, by the Dalton and Elliot Highways and the growth of the mining industry in this sub-region. The area that has expanded the most is Livengood.

The topography of this region is varied throughout the region and includes both uplands and lowlands. The uplands consist of a number of low mountain ranges including the Ray Mountains and White Mountains. The highest peak is Mt. Eldridge, 6,250 feet. The upland valleys are generally heavily forested. Wetlands are a major feature within this area, which surround the abundant waterbodies located throughout this sub-region. In the western, central, and southern areas, wetlands surround the floodplains of the Yukon, Tanana and Cosna Rivers, in addition to and multiple sloughs, smaller rivers, creeks and lakes. Wetlands are located in the northwestern area along sections of the Yukon River and surround the numerous rivers and creeks northeastern areas. Wetlands surround the Tolovana River in the eastern area and a multiple creeks in the northeastern area. The Minto Flats Game Refuge is a massive wetlands complex that is located in the southeastern area of this sub-region. There are also two areas with hot springs; the Manley Hot Springs and the Tolovana Hot Springs.

Access, Resources, and Uses of State Land

Access into the Lower Tanana region is provided by the Elliot Highway in the southeast, which turns west in Livengood and transverses the central area of the sub-region, ending at Manley Hot Springs. A road from Manley Hot Springs to Tanana has received funding from ADOT/PF. Current land access to Tanana from that area is provided along RS 2477 routes. The Elliot Highway is proposed for expansion as a land route to Nome. The route, which is in the planning phase, would begin near Manley Hot Springs and follow the Yukon River through interior villages west to Norton Sound. The Dalton Highway begins at Livengood and travels north, generally paralleling the Trans-Alaska Pipeline System and ends at the North Slope. Local road systems situated in the small communities of this area and roads to private land and mining resources in more remote areas provide an additional level of access. A number of RS 2477 trails, scattered throughout the region, provide additional access to remote sites.

A variety of resources exist on state land, although the amount of state land within the region has decreased somewhat, resulting from settlement and agricultural land disposals, and conveyances to the Mental Health Trust. Although much of the land within this region is not considered suitable for agriculture due in part to its remoteness, agriculture may be appropriate in the eastern area of the sub-region. Significant amounts of Settlement land identified in the original plan remain and the majority of this is situated within the current areas of remote settlement and in several new areas designated for remote recreational staking. Settlement land is also appropriate around the existing communities to accommodate population growth.

Areas with forest resources are primarily associated with the Tanana Valley State Forest (TVSF) and immediately surrounding areas. Additional forestry areas are located in the central, southern, and western areas of the sub-region, but do not extend north of the Yukon River.

There are valuable mineral resources within the Lower Tanana region and there are two major mining districts, Eureka-Tofty District in the west and the Tolovana Mining District in the east. Highly active mining occurs around the Manley Hot Springs and Livengood areas, which are located in those districts, respectively. Over 500,000 ounces of gold and over 600,000 pounds of tin have been produced from placer mines in the Eureka-Tofty area. The Tolovana Mining District contains one of the largest reserves of placer gold in North America, which is found on bench gravels along Livengood Creek. Gold bearing bench gravels are also located along Lost Creek. Precious Lode deposits in the Tolovana district contain gold, silver, antimony, mercury, chromium, nickel and iron. Coal has been found along the Yukon River and additional coal occurrences have been recorded in the northern areas of the sub-region, east of the Yukon River.

Wildlife resources within the region are considered to be high. Bear, caribou, moose, waterfowl, as well as other wildlife are present. Caribou are present in the northern area of the region, north of the Yukon River and northeast of the Dalton Highway. A caribou calving area for the White Mountain Caribou herd occurs in the northeastern area of the sub-region, in the general vicinity of the Poker Flats Research area. A caribou wintering area associated with the Ray Mountain herd occurs in the northwestern area of the sub-region, along the Yukon River. Moose are distributed throughout the region. Moose calving and wintering is concentrated along the western Yukon River, Tanana River, and Cosna Rivers. Moose wintering and rutting occur along the Yukon River and in lowland areas associated with the numerous smaller rivers, creeks, and lakes. A major waterfowl nesting area is located surrounding the Fish Lake, which is located in the western central area of the sub-region. A number of anadromous streams occur through the region, the most important of which are associated with the Yukon, Tanana, Cosna, and Tolovana Rivers.

River valleys and historic trails are accessible from the highway to Fairbanks and to the small communities along the Elliot and Dalton Highways. Two hot spring areas are popular for recreational use: the Manley Hot Springs and the Tolovana Hot Springs. The Chitanana Dune System located in the southwestern area of the region is also popular. Hunting within this region is especially significant for moose. The Yukon and Tanana Rivers provide opportunities for fishing, hunting, rafting, and during the winter months, for snow machining.

Management Constraints

There is still a large amount of state selected land within this region and not all of that will be conveyed to the state. Large concentrations of selected land occur south of the Tanana River and north of the Yukon River, with parcels selected along the Yukon River. There are also concentrations of selected land along the Dalton and Elliot Highways. If the land is not

conveyed to the state, a significant portion of land that is recommended for Habitat in this plan will be conveyed to Native corporations or remain in federal ownership and will not be subject to the management intent in this plan. There is an increased need for settlement land in the region. There are several communities in this area with growing populations and expansion is likely. Much of the land immediately surrounding those areas has been conveyed to Native corporations. Wetland terrain on state owned land within those vicinities may make settlement of those areas difficult.

There are three legislatively designated areas within this region that will be managed according to the stipulations outlined by the legislature and corresponding management plan where applicable. These areas are the Tanana Valley State Forest (AS 41.17.400), the James Dalton LDA (AS 19.40.140), and the Minto Flats State Game Refuge (AS 16.20.037). A Management Plan was adopted for the Tanana Valley State Forest Management Plan in 2001 and is the guiding document for forest management. A management plan for the Minto Flats State Game Refuge Plan was developed in 1992 and is the guiding document for the management of the refuge.

Management Summary

The overall management intent for this region is to dispose of some land for agricultural and settlement, retain land with forestry values and (it is recommended) incorporate some of these into the Tanana Valley State Forest, and retain state land associated with mineral, habitat, and public recreation and to manage state land consistent with these values. Areas of important habitat and public recreation, as well as extensive wetlands, are to be retained in state ownership in order to protect fish and wildlife, hydraulic resources, and to ensure that the public continues to have access to the recreational resources associated with the main rivers and the upland areas that are now being used for recreation.

State land is to be managed consistent with the plan designations and management recommendations (including management intent and guidelines) contained in the Resource Allocation Table for this region. Most state land will be managed in a manner similar to its designation, which means that most will be managed for their habitat, forestry, and mineral values.

Land disposals are recommended in several new locations, but most areas appropriate for settlement occur within already established settlement areas. The plan intends that selected areas within current subdivisions or remote settlement are appropriate for disposal. Totalling 198,000 acres, most of these settlement areas are situated near or some distance from the Dalton and Elliot Highways. The amount of agricultural land remaining within the region is rather limited, but there are four areas that may be suitable for agriculture remaining, which total 9,850 acres, and are situated generally along the Trans-Alaska Pipeline System. The amount of land designated Forestry is somewhat greater than in the 2012 plan, reflecting newer information and the use of a single plan designation that identifies a primary basis for state land management. Over 133,000 acres of state land are considered to have primary

forestry potential. Most of these areas occur near the current boundaries of the Tanana Valley State Forest and much of this land is recommended as additions to the State Forest. Such areas usually adjoin the State Forest and have similar characteristics of adjacent land within the State Forest. An additional 92,000 acres are recommended for a combined Forestry/Habitat designation. Similarly, mining exploration and subsequent development is considered appropriate within the very large area of the Eureka-Tofty Mining District and Tolovana Mining District, located in the central and eastern areas of this sub-region. Over 75,000 acres are designated Mineral in this area. Areas along the Yukon and Tanana Rivers, and low lying wetlands associated with the numerous creeks in the region are often important for both their mineral and habitat resources; these areas are co-designated Minerals and Habitat (304,000 acres). Mining is to be considered generally appropriate within these areas, but any development that takes place must consider and either avoid or mitigate impacts to significant habitat areas. Other areas of important habitat occur throughout the region. Areas having primarily habitat value are assigned the designation of Habitat (538,000 acres).

Resource Allocation Table – Lower Tanana Region

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
T-01	Rd 7,675	Map 3-2(a) F001N23W	<p>Manage for research and compatible recreation activities. 			<p>Consult ADF&G prior to forestry actions to ensure habitat and resource protection.</p> <p>Refer to the Fish and Wildlife section in Chapter 2 for specific guidelines.</p>	<p>A Mineral Closing Order (MCO 510) affects the south central area of this unit (F005N009W).</p>
T-41	F 34,361	Map 3-2(b) F005N006W, F005N007W, F005N008W, F005N009W, F005N010W, F006N006W	<p>Manage unit for its forest resource values. Management emphasis will be focused on maintaining the natural character of the unit, while providing opportunities for select and personal harvest, and maintaining habitat, wildlife, and recreational values. Retain in State ownership.</p> <p>Recommend all sub-units for addition to the Tanana Valley State Forest.</p> <p>Check land status prior to issuing authorizations.</p> <p>Refer to the Fish and Wildlife section in Chapter 2 for specific guidelines.</p> <p>The designation/classification of the preference right application noted in the Description will convert to Settlement if the adjudication decision determines that to do so is in the best interest of the state and with the requirements pertinent to preference rights. (If the adjudication decision determines that the application is not in the best interest of the state or that the requirements pertinent to preference rights are not met, the designation and classification of the area of the preference right application remain Forestry.)</p>	<p>This unit consists of five sub-units and is characterized by mixed topography. Vegetation includes deciduous, evergreen and mixed forests. Moose, duck, geese, and brown bear are present.</p> <p>A Mineral Opening Order (MOO 689) affects most of the southern sub-units of this unit (F003N012W ad F003N011W).</p> <p>A small area within the MOO area is actually closed to mineral entry closing order (MCO 184) (F003N012W).</p> <p>Land in the northwestern area of the eastern sub-unit is topfiled selected under ANILCA (F006N006W). The selection does not have a priority ranking and it is unlikely that it will be conveyed to the state. The remaining land in this unit is state owned.</p> <p>A preference right (10 acres within SE1/4 of Section 15 and the NE1/4 of Section 22, T4N, R13W, FM) was applied for and granted a Land Use Permit (LAS 28411) but may want to purchase the land. DMLW has begun adjudicating the case but will not be able to reach a decision until sometime after the approval of YTAP. Rather than require the amendment of the plan shortly after it had been approved, it would be more practical to recognize this situation and provide for reclassification of the 10 acre parcel if the preference right adjudication determines that the application meets the requirements of statute and should be approved. See Management Intent.</p>

Map 3-2(a): Lower Tanana Region WEST

Map 3-2(b): Lower Tanana Region EAST

Map 3-2(c): Lower Tanana Region NORTH

Kantishna Region

The Kantishna region occupies an area of approximately 3,058,441 acres in the southwestern part of the planning area. It includes the drainage areas of two major rivers, the Teklanika and Kantishna, as well as numerous lakes, the largest of which is Lake Minchumina in the far southwestern part of the region. The region extends from (essentially) the Tanana River in the north to Denali National Park and Preserve in the south, and from the Nenana River in the east to the Chitanatala Mountains in the west. An extension of the region, in the far southwestern part of the region, includes Lake Minchumina. This region and the proposed management units are depicted on maps 3-3a and 3-3b.

With the exception of a limited amount of private land, which are usually located near and around lakes and streams and are associated with previous land disposals, land ownership in this region is almost entirely state and federal. State owned land totals 2,300,000 acres and federal land, approximately 650,000 acres. Nearly all of the remaining federal lands, with the exception of areas within the Denali National Park and Preserve, have been either selected by Native corporations or the State of Alaska. This large area is separated into a western hilly to mountainous portion and eastern portion that is flat to gently rolling. Areas of hilly and mountainous topography occur in areas of the Kuskokwin, Bitzshini, and Chitanatala Mountains. Areas that adjoin or are east of the Kantishna River are particularly flat. Areas adjacent to the Teklanika River are also generally flat to gently rolling. There is a wide variation in vegetation types, with wetlands, deciduous and evergreen forest, and shrub the most prevalent. Generally, areas near the Kantishna River exhibit a mix of wetlands and evergreen forest, with areas between the Kantishna and Toklat Rivers, and to the east of these areas, exhibiting a mix of shrub, wetlands, and evergreen forest, depending on soil and terrain. In the hilly to mountainous terrain to the west of the Kantishna River vegetation is either a mix of barren rock and alpine tundra at the higher elevations and by a mix of shrub and evergreen forest in the lower elevations.

State land is to be managed as state public domain land with Title 38 of the Alaska Statutes except for the one Legislatively Designated Areas (LDA) within the region, the Tanana Valley State Forest, which is situated in the north-central part of the planning area. The Minto Flats State Game Refuge extends as a kind of finger into the region, but is actually part of the adjoining region to the north, Lower Tanana. Both of these special areas follow the requirements of the legislation authorizing the LDA as well as specific management plans that have been adopted subsequent to the creation of each LDA.

Access, Resources, and Uses of State Land

Access to these lands is very limited, reflecting its remoteness and the absence of roads within the region. There is no access from the Parks Highway into this region from the east. What access that exists is provided by off-road vehicles using local and regional trails, or frozen

rivers during the winter. Access is also provided by float or wheeled fixed wing aircraft that use either private airstrips, waterbodies, or gravel bars for landing. Fly-in access is often limited by local weather conditions.

Moose are present throughout the region; wintering, rutting, and calving areas are concentrated along the riverine areas associated with the Zitziana, Kantishna, and Toklat Rivers. Caribou are present in only one area of the region – the area between the Teklanika and Toklat Rivers in the southeastern part of the region. There is no known calving, rutting, or wintering areas of caribou in the region. Brown bear are present throughout the region, while waterfowl, while present, are distributed almost entirely throughout lowland areas.

No coal bearing units or basins with potential hydrocarbon formations are known within the region. Areas with mineral potential are located in the Bitzshtini, Chitanatala, and Chitsia Mountains. Active mineral claims are located in the Chitanatala Mountains, an area south of Lake Minchumina, and a location along the Kantishna River near the Tanana Valley State Forest. Areas closed to mineral entry coincide with significant habitat features or with the presence of state subdivisions. Other than the areas that are now closed to mineral entry and that might be closed by future settlement activity, the region will be left open to mineral entry, coal prospecting and leasing, oil and gas leasing, and industrial leasing for mill sites.

Forest resources are considered moderate within the region and are largely concentrated in the extension of the Tanana Valley State Forest in the north-central part of the region. Other than this location, forest resources, which are associated with both evergreen and deciduous forests, are situated in locations near the TVSF, along parts of the Teklanika River, and near Lake Minchumina. The large areas of good forest in these locations are not of commercial value because of their location and lack of accessibility but may be important as a source of local wood products.

Recreation opportunities in this region are of low to moderate value overall because of the limited accessibility of the area. Recreation use is concentrated on rivers, including the Kantishna and Teklanika, and around lakes, including Lake Minchumina as well as some other the smaller lakes west of the Kantishna River. For residents of the region, winter trails, generally coinciding with the larger rivers, are of high recreational value.

There is little agricultural activity in the region, although the area west of the Tanana River directly and the community of Nenana, has soils suitable for agriculture. There may be some use of agriculture land in this area, but its development of this is dependent upon the construction of a bridge across the Tanana River near Nenana. This same area was identified for agricultural development in the 1985 Area Plan.

Since the preparation of the last area plan for this area, many areas have been conveyed out of state ownership through remote staking projects and state subdivisions. Most of these areas have occurred either along streams or lakes, both of which are attractive features for the purpose of settlement. Although much of the better state land within these areas have been disposed of, considerable land remains in many of the remote staking areas and it can be

expected that additional development will take place in these areas as well as within those areas that are recommended for settlement in the 2012 Plan Revision. Areas of recommended settlement also occur adjacent to lakes and streams, with many of the lakes being allocated for potential development for the first time.

Management Constraints

The southernmost portion of the region is situated within the Denali Borough. There are, in addition, a number of small communities. Both boroughs have comprehensive plans (the communities do not), but these are ‘policy plans’ and do not contain a land use plan map that identifies preferred development patterns. There are two state plans affecting this region: the 1985 Tanana Basin Area Plan and the Tanana Valley State Forest Management Plan. The State Forest plan only deals with the management of the state forest, while the remainder of the planning area is affected by the 1985 Area Plan. Both plans were consulted during the revision process but the recommendations in the 2013 plan revision may not always coincide with those of the initial plan

Management Summary

The overall management intent for this region, similar to the 1985 Area Plan, is to manage the region to provide for the continuation of current uses. There may be limited residential and mineral development, but the major emphasis is to protect the habitat and recreational resources of the area and also to maintain the option to develop agricultural lands if access and market conditions change. Some areas with forest resources along the Kantishna River are considered appropriate for inclusion in the Tanana Valley State Forest, while other areas are appropriate for local wood product needs. Except for limited areas of residential land disposal, the remainder of state land is to be retained in state ownership.

State land is to be managed consistent with the plan designations and management recommendations (including management intent and guidelines) contained in the Resource Allocation Table for this region. Most state land will be managed in a manner similar to its designation, which means that most will be managed for their habitat, public recreation, water resources, and mineral values.

Given the relative remoteness of this region, extensive areas of wetlands and poor soils, and the absence of roads, little development is expected in the region during the planning period. Most development is expected in areas designated Settlement, which totals 217,671 acres. Although seemingly extensive, this figure includes areas of adverse terrain and soil conditions as well as areas that have already been conveyed out of state ownership. Moreover, many of the areas designated Settlement are intended for remote staking; in these developments parcels, only occupy on a limited area within the general staking area. Such settlement activity that does occur is likely to be situated in new areas of settlement and at lakes and along rivers in areas of previous settlement that, because of changes in

development requirements, may be available for settlement. Some amount of agricultural development (148,502 acres) may also occur, but because of the absence of access, limited market demand, and scarce infrastructure, this is likely to be very limited. It will, nonetheless, be important to retain lands designated Agriculture that are not developed so they can function as reserve in the event that this land is eventually needed for agricultural purposes. Mineral development is also possible, although the areas of mineral potential in this region, mostly located in the western, mountainous areas of the region, are much less extensive than in the Parks Highway and West Alaska Range region, with development more likely in the latter. Areas designated Minerals (64,723 acres) are to be managed for the potential development of this resource and are to be retained in state ownership. Forest resources (86,224 acres) are either recommended for inclusion in the Tanana Valley State Forest or may be important for local wood products, but the commercial harvest of these resources is not anticipated during the planning period because of the lack of access and limited demand.

The remaining lands in the region are designated Habitat, Water Resources, and General Use, and are to be managed for their habitat, recreation, and water resource values. Areas designated Habitat (540,761 acres) are to be managed to protect important habitat resources. In this region, such habitats are usually associated with the riverine areas of the Kantishna, Teklanika, and Toklat Rivers, which are important for moose rutting, winter concentration, and calving. Areas designated Water Resources (117,146 acres) are, in this region, associated with the presence of large wetland complexes that are adjoin or constitute these riverine areas or occupy extensive areas isolated from rivers and creeks. Both Water Resource and Habitat designated areas are intended to be managed for their habitat and water resource values, are to be retained in state ownership, with only limited public development considered appropriate. Areas designated General Use (1,439,177 acres) do not have a dominant resource value and are considered to be a multiple use land use category. Nonetheless, these areas are usually remote, lack access, and often contain terrain and soils not conducive to development. These areas are to be retained in state ownership with only limited, public or utility improvements considered appropriate.

Resource Allocation Table – Kantishna Region

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description

Terrain is generally similar in the two parcels (generally level) but there is a marked difference in vegetation. West Twin Lake has extensive stands of evergreen with some areas of shrub in its northern part while East Twin Lake is characterized by appreciably more shrub vegetation, although a significant stand of evergreen forest</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				occupies its northern part. Moose and brown bear are present. Mineral closing orders 215, 226, and 1045 close most of the unit. Land disposals have occurred on both lakes, and the characteristics of these lakes provide an opportunity for additional land disposals within both parcels.
K-23	Gu 165,965	Map 3-3(b) F002S014W, F002S015W, F003S014W, F003S015W, F004S014W, thru 016W; F005S014W, thru 016W	State land is to be retained and managed for multiple uses. The emphasis is on maintaining the natural character of the unit, wildlife habitat and recreational opportunities. Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state.	This extensive unit occupies level to moderately rolling terrain, with some areas of generally flat river valleys, in the area west of the Kantishna River. Except for the northern part of the unit, which contains scattered wetlands, this large area is vegetated by evergreen forest interspersed with wetlands and deciduous forest. Moose and brown bear are present.
K-24	Se 3,520	Map 3-3(b) F002S015W, F003S014W	Additional areas of land disposal may be feasible within the two parcels that constitute this unit, but the availability of suitable land is believed to be limited. The feasibility of additional land disposal should be carefully evaluated prior to authorization. ADF&G should be consulted prior to any decision to offer land for disposal around Kindanina and Geskakmina Lakes to ensure adequate protection of riparian habitats and resources. If determined to be feasible, additional land disposal is appropriate during the planning period. Areas of wetlands are to be avoided in any such disposal program; these are particularly prevalent at the north end of Geskakmina Lake. Access to Geskakmina Lake is to be maintained and at least one public use site should be provided to protect access and use of the water body. See Chapter 2 for specific management guidelines.	Unit consists of two separate parcels, occupying uplands adjacent to Kindanina and Geskakmina Lakes. Terrain is generally similar in the two parcels (generally level) and both are characterized by evergreen vegetation mixed with occasional wetlands. Moose and brown bear are present. The unit is closed to mineral entry under Mineral Closing Order 905. ADF&G stocks Geskakmina Lake and public access to this waterbody is important. Land disposals have occurred along both lakes and it is problematic if additional areas can be developed in either. The amount of available, disposal land adjacent to each lake is very limited and some of this land is occupied by wetlands.
K-25	Se 5,255	Map 3-3(b) F004S014W, F005S014W, F005S015W	Land may be appropriate for land disposal, depending on the results of further analysis to determine feasibility of development at these locations. The lakes are quite small but are sufficiently large for float plane access. The practicality of this access needs to be confirmed and the feasibility of development needs to be resolved prior to developing a formal disposal decision. See Chapter 2 for specific management guidelines.	Unit consists of six separate parcels occupying upland areas adjacent to a number of relatively small but potentially floats plane accessible lakes. Vegetation depends on location and may be wetlands, shrub, or deciduous forest. Terrain is flat. Moose and bear are present. Mineral closing order 1045 affects this unit. Unit is closed to mineral entry.
K-26	F 17,897	Map 3-3(b) F002S014W,	Manage unit for its forestry values. Management emphasis will be focused on maintaining the natural character of the unit, while providing	Unit adjoins the Tanana Valley State Forest (TVSF) to the east and is, in many respects, an extension the terrain and vegetation features of TVSF.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
		F003S014W	opportunities for personal harvest and forest management, while maintaining habitat, wildlife, and recreational values. Retain in State ownership. Recommend as an addition to the TVSF. See Chapter 2 for specific management guidelines.	It is characterized by extensive stands of deciduous, evergreen, and mixed forest separated by scattered wetland complexes. Moose and brown bear are present. Note: moose calving areas occur to the north of this parcel in the adjoining region.
K-28	Se 23,158	Map 3-3(b) F002S013W, F003S013W, F004S013W, F005S013W, F005S014W	Land disposals are appropriate within the planning period. Retain land for purposes of supporting the State's land disposal program. See Chapter 2 for specific management guidelines.	Portions of this unit, especially adjacent to the Kantishna River, are occupied by recreational cabins associated with a previous state remote recreational land disposal. Cabins are also present on some tributary streams. Terrain is flat and vegetation is characterized by evergreen and mixed forest adjacent to the Kantishna River and by extensive stands of deciduous and mixed forest in the northern part of the unit. Brown bear and moose are present, and the southern part of the unit (F004S013W) is important moose habitat (calving and wintering). The Kantishna River is an anadromous stream. Mineral closing order 699 closes the unit to mineral entry.
K-30	Ha 24,282	Map 3-3(b) F003S012W, F003S013W, F004S012W, F004S013W, F005S013W	Manage to protect and maintain wetland hydrologic and habitat values. It is intended that this unit continue in its natural state and be retained in state ownership. Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit.	Unit consists of three separate parcels, on each side of the Kantishna River and Tanana Valley State Forest. The areas on the east occupy a flat, wetland complex that abuts the Kantishna River and extends southwesterly from Black Bear Lake. They abut the Tanana Valley State Forest on the west and occupy extensive parts of the floodplain of this river. It is an important habitat area for moose. Calving, rutting, and wintering habitats occur in the northern parts of this unit and both calving and wintering habitat in its southern parts. Brown bear are present. The area on the west also consists of an extensive wetlands complex with strips of evergreen forest adjoining the Kantishna River. Portions of this area are important habitat for moose rutting, wintering, and calving. Brown bear are also present.
K-31	F 2,547	Map 3-3(b) F002S013W, F003S012W	Manage unit for its forest resource values. Management emphasis will be focused on maintaining the natural character of the unit, while providing opportunities for personal harvest and maintaining habitat, wildlife, and recreational values. Retain in State ownership. This unit is recommended for inclusion into the Tanana Valley State Forest.	Unit consists of two separate, widely separated parcels. The area to the east (F003S012W) of the Kantishna River occupies level terrain comprised of wetlands mixed with evergreen forest. It abuts the Tanana Valley State Forest on the west and occupies extensive parts of the floodplain of this river. Moose and brown bear are present. Forest values include mixed spruce/hardwood stands of commercial size. The area to the west (F002S013W) occupies similar terrain and has similar characteristics.
K-32	Ag	Map 3-3(b)	Manage unit for its agricultural values. Agricultural land disposals are appropriate during the planning period; Chapter 2 requirements	This extensive unit is considered appropriate for agricultural use, based on soil information (generally a silty loam soil) and has been classified as

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
	148,502	F002S009W, F002S010W, F003S009W, F003S010W, F003S011W, F004S009W, F004S010W, F004S011W, F004S012W, F005S010W, F005S011W, F005S012W, F005S013W	(Agriculture) apply in such disposals. Forestry activities are also appropriate within this area and may occur independently of or can precede an agricultural land disposal. If a timber harvest is scheduled far in advance of agricultural operations, the land should be reforested to protect soils. Timber sales may occur immediately before an agricultural disposal, subject to Chapter 2 requirements. The DoAg should be consulted prior to any forest management activity, especially commercial timber harvest. Protect cultural resources. Check land status within the area of selection in F003S009W prior to issuing authorizations. LLO 33 affects portions of this unit.	Agricultural Land since the adoption of the original area plan in 1985, although there have been no land disposals during that period, reflecting the absence of demand and ready access. Vegetation within this unit is characterized by extensive stands of evergreen forest. Moose and brown bear are present. Areas within this unit may not be suitable for agriculture, reflecting poor soils and drainage. Consult soils maps prior to authorizing sales. Except for areas within F003S009W, the entire unit is composed of state land. Portions of this unit are closed to mineral entry; most of the unit is open to mineral entry. Cultural resources are present within this unit.
K-33	Wr 3,156	Map 3-3(b) F004S012W	Manage to protect and maintain wetland hydrologic and habitat values. It is intended that this unit continue in its natural state and be retained in state ownership. Continued dispersed recreation uses are appropriate. Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads and similar types of projects that provide a general public benefit.	Unit occupies a flat, lowland area that is an extension of the extensive wetland complex to the north surrounding Black Bear Lake. Wetlands comprise most of the unit, with evergreen forest being present on the fringes of the wetland complex. Moose and brown bear are present.
K-34	Wr 19,032	Map 3-3(b) F004S009W, F005S010W, thru 012W; F006S010W, thru 012W	Manage to protect and maintain wetland hydrologic and habitat values. It is intended that this unit continue in its natural state. Retain in state land. Continued dispersed recreation use is appropriate. Development is unlikely within this unit and, except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit are generally inappropriate.	This unit consists of six separate parcels, with some of considerable size; each is characterized by extensive wetland complexes. Stands of evergreen and deciduous forest are often present in areas of better soils. Moose and brown bear are present.
K-35	Se 800	Map 3-3(b) F005S010W	Further land disposal within this unit is not considered practicable or appropriate. Retain the remaining areas of the unit in state ownership. See Chapter 2 requirements.	Unit consists of a previous state subdivision (ADL 417340) and most, if not all, of the lots have been conveyed out of state ownership. Areas of undeveloped state land occur on the north and south shore of Teklanika Channel Lake, coinciding with areas of wetlands, and adjoining the subdivision. Except for the wetland areas, vegetation is a mix of evergreen and deciduous forest. Terrain is generally flat. Moose and brown bear are present. The wetland areas on the north and south shores of the lake are not appropriate for development and are to be avoided. It is problematic if the remaining vacant areas in the unit are practicable for development; the lake is the primary feature and practicable areas adjacent to the lake have already been developed. Unit is closed to mineral entry.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
K-36	Wr 31,359	Map 3-3(b) F004S009W, F005S009W, F005S010W, F006S010W, F006S011W	<p>Manage to protect and maintain wetland hydrologic and habitat values. It is intended that this unit continue in its natural state. Retain in state land. Continued dispersed recreation use is appropriate.</p> <p>Development is unlikely within this unit and, except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit are generally inappropriate. Public access on RS 2477 Trails will be maintained.</p>	<p>This extensive unit is characterized by generally flat terrain occupied by extensive wetland complexes and areas of shrub. Linear bands of evergreen forest occupy the better drained soils, particularly in the western part of the unit (and serve to distinguish this parcel from K-34, which also contains extensive wetland complexes). Moose and brown bear are present.</p> <p>An RS 2477 route (RST 346), the Nenana – Kantishna Trail crosses portions of the eastern boundary of this unit.</p>
K-37	F, Ha 2,105	Map 3-3(b) F004S009W, F005S009W	<p>Manage unit for its wildlife, habitat and forest resource values. Within the northern subunit, where habitat values are greater, the management focus will be on the protection of habitat values, while permitting personal wood harvest and general forest management that may include some commercial sales. Management emphasis on the southern of the two subunits is to focus on maintaining the natural character of the unit, while providing opportunities for select and personal harvest, and maintaining habitat, wildlife, and recreational resources. Retain in State ownership. ADF&G should be consulted prior to any forestry projects to ensure adequate protection of fish and wildlife resources.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>Unit consists of two separate parcels just west of the Teklanika River. Terrain is mostly flat and vegetation consists of a mix of wetlands, deciduous forest, and evergreen forest. Moose and brown bear are present. Forest values include mixed spruce/hardwood stands that will provide opportunities for personal use and forest management. An RS 2477 (RST 346), the Nenana – Kantishna Trail, follows the eastern boundary of this unit. There is state legislative interest in oil and development. This unit is included in that area of interest (the area within a radius of 100 miles of Fairbanks.)</p>
K-38	Se 3,168	Maps 3-3(a & b) F007S017W, F007S018W	<p>Land may be appropriate for land disposal, depending on the results of further analysis to determine feasibility of development at these locations. If this analysis finds that development is not feasible, this parcel should be managed for its habitat values, with consideration given to its redesignation and reclassification to Habitat/Wildlife Habitat.</p> <p>The lakes are quite small but are sufficiently large for float plane access. The practicality of this access needs to be confirmed and the feasibility of development needs to be resolved prior to developing a formal disposal decision.</p> <p>LLO 33 affects this unit.</p> <p>See Chapter 2 for specific management guidelines.</p>	<p>Unit consists of two separate units occupying upland areas adjacent to two lakes that are situated within sections 7, 17, and 30. Although relatively small (about 100 and 300 acres) the lakes are potentially float plane accessible. Vegetation depends on location and may be wetlands, shrub, or deciduous forest. Terrain is flat. Moose and bear are present.</p>
K-39	Ha, Rd 5,094	Map 3-3(b) F002S008W, F003S008W	<p>If conveyed to the state, manage unit for their wildlife, habitat and recreation values. Retain in state ownership.</p> <p>Review land status to determine if unit has been conveyed to the state prior to issuing authorizations.</p>	<p>Unit consists of a number (6) of parcels that either adjoin the Tanana River or sloughs of that river. All are in selection status and it is problematic if the state will actually acquire these parcels; all are affected by native allotments. Terrain is flat and the parcels are heavily vegetated with evergreen and deciduous forests mixed with wetlands. Unit is associated with high habitat values; parcels are used for moose wintering, calving, and rutting. Brown bears are present. The Tanana River is an anadromous stream.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
K-40	Wr 6,313	Map 3-3(b) F003S008W	<p>Manage to protect and maintain wetland hydrologic and habitat values. It is intended that this unit continue in its natural state. Retain in state land. Continued dispersed recreation use is appropriate.</p> <p>Development is unlikely within this unit and, except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit are generally inappropriate.</p>	Terrain is generally flat, heavily vegetated with evergreen and deciduous forest, and adjoins the Tanana River. Moose and bear are present.
K-41	F 366	Map 3-3(b) F003S008W	<p>Manage unit for its forest resource values. Management emphasis will be focused on maintaining the natural character of the unit, while providing opportunities for select and personal harvest, and maintaining habitat, wildlife, and recreational values. Retain in State ownership.</p> <p>See Chapter 2 requirements.</p>	Unit is generally flat and consists of an extensive wetland complex with limited bands of uplands consisting of deciduous and evergreen forests. Moose and brown bear are present. Forest values include productive stands of riparian spruce saw timber.
K-42	F 640	Map 3-3(b) F004S008W	<p>Unit is affected by school trust litigation and all actions must follow the requirements of Department Order 143.</p> <p>DOF should not undertake any authorizations in this unit until DMLW has reviewed the proposed action and has determined that it is consistent with the court requirements pertinent to School Trust Lands. This is especially true of any actions involving disposals of state interest. Consult with Realty Services, DMLW, for pertinent requirements.</p> <p>In the event that the litigation is resolved and this land becomes general state land, the unit is to be managed for its forest resource values. Management emphasis will be focused on maintaining the natural character of the unit, while providing opportunities for personal harvest and maintaining habitat, wildlife, and recreational values.</p>	<p>Terrain is generally flat, heavily vegetated with evergreen and deciduous forest, and is situated about one mile west of the Tanana River. Moose and bear are present. Forestry values include productive stands of riparian spruce saw timber. A tributary of the Nenana River traverses the center of this unit.</p> <p>This unit occupies Section 16 and is part of the School Trust Lands. Currently (2011) all actions involving such lands must be reviewed by DMLW staff to ensure that court requirements on the disposal of these lands are ensured.</p>
K-43	Se 6,533	Map 3-3(b) F002S008W, F002S009W, F004S009W	<p>Unit, which consists of three separate parcels, may be conveyed to the Mental Health Trust in fulfillment of an obligation to reconstitute the Trust pursuant to a Settlement Agreement between the state and settling plaintiffs (1994). Until a determination is made that the parcels are not required for Trust reconstitution, they are to remain in the Replacement Land Pool. If a determination is made that the parcels are no longer required for such reconstitution or by June 11, 2013, whichever occurs first, they can then be treated as general domain land and can be managed for the purpose of eventual disposal out of state ownership. Under these conditions, disposal of these lands during the planning period is considered appropriate. Review ADL 229606 and consult with DMLW before taking any action that would involve a permanent use or a disposal out of state ownership.</p> <p>Note: the classification assigned this unit, which is Settlement, does not affect the Trust in its management of Trust lands if the land is conveyed,</p>	Unit consists of three separate parcels of land designated as Mental Health Trust Replacement Land. These lands may be conveyed to the Trust if necessary to compensate for lands conveyed in error to the Trust or that have been found to be affected by hazardous materials. These parcels will remain in this status until June 11, 2003 unless the state and Trust agree that the parcels are no longer required for Trust reconstitution.

Wetlands comprise most of the unit, with evergreen forest being present on the fringes of the wetland complex. Moose and brown bear are present.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
K-59	Se 15,497	Map 3-3(b) F006S015W	Land disposals are appropriate within the planning period. Retain land for purposes of supporting the State's land disposal program. See Chapter 2 for specific management guidelines. Avoid moose calving and wintering areas in siting of settlement areas.	Land disposals have occurred within this unit in the past, with the area of disposal generally along the Kantishna River and one of its tributaries. Terrain is fairly hilly in portions of the unit while other areas are relatively level. The area having the remote recreation cabins tends to coincide with the somewhat more hilly parts of the unit. Significant portions of the unit (Cannon Remote Recreation) have not been developed and the opportunity may exist for additional disposals. Moose and brown bear are present in the unit; the most southern part of the unit contains a moose wintering and calving area. This unit is closed to mineral entry (MO 275).
K-60	Ha, Wr 30,141	Map 3-3(b) F009S015W, F010S015W, F010S016W	Manage unit for its wildlife and habitat values and to protect lake/pond complexes. Continued dispersed recreation uses are appropriate. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorization that may be issued will need to avoid or mitigate impacts upon essential moose habitat, wetlands and riverine areas, lake and pond complexes, and other sensitive features. Public access on RS 2477 Trails will be maintained.	Numerous small lakes and ponds occupy this unit; adjoining most of these are evergreen forest with scattered deciduous forest, wetlands and shrub vegetation. Significant moose habitat, primarily used for wintering and calving, occupies most of this unit and is an extension of the same habitat pattern found in K-54, a large management unit situated to the north. Terrain is uniformly level. Most of this unit is in selection status (F010S015W); the remainder is state owned. Check land status prior to issuing authorizations or disposals. A mineral prospect (ARDF KH002) exists along Chitsia Creek within Section 22, F010S015W, and consists of gold placer deposits. There are placer claims in this area. Two RS 2477 Trails occur in this unit. The Kobi – Kantishna Trail (RST 343) transverses the southwest area of this unit and (RST 491), the Rex – Roosevelt Trail travels through the central and eastern area of this unit.
K-61	Ha 95,575	Map 3-3(b) F004S014W, F005S013W, thru 015W; F006S013W, thru 015W; F007S012W, thru 014W; F008S012W, F008S013W, F009S012W, F009S013W, F010S013W	Manage unit for its wildlife and habitat values and to maintain riverine and wetland areas. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorization that may be issued will need to avoid or mitigate impacts upon essential moose habitat, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features. Public access on RS 2477 Trails will be maintained.	This unit consists, with the exception of the area occupied by K-68, of the Toklat River and its adjoining riverine area. The valley bottom of this river is generally flat and, depending on location, is vegetated by shrub, wetlands, or a mixed evergreen/deciduous forest. The Toklat River is an anadromous stream and its riverine area is an important wintering and calving habitat for moose. It also functions as a migratory pathway and important game corridor, and that part south of the Toklat Springs spawning area (K-68) has major brown bear concentrations. An RS 2477 Trail, the Nenana – Kantishna Trail (RST 346) extends through the center of the unit in a north south direction.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
K-62	Gu 166,757	Map 3-3(b) F007S014W, F007S015W, F008S013W, F008S014W, F008S015W, F009S013W, F009S014W, F009S015W, F010S013W, F010S014W	<p>Manage unit for multiple uses. The emphasis is on maintaining the natural character of the unit, wildlife habitat and recreational opportunities.</p> <p>Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>Unit occupies a large upland area between the valleys of the Kantishna and Toklat Rivers, most of which is flat except for small, incised valleys of numerous small streams and a hilly area in the southern part of the unit which contains evergreen forest. The central area contains a mix of shrub and mixed forest. The northernmost areas are mostly occupied by wetlands. Moose and brown bear are present.</p> <p>An RS 2477 route (RST 491), the Rex – Roosevelt Trail traverses part of this unit.</p> <p>Due to the mineralized nature of land in the vicinity of this unit, there is a possibility that mineral potential may be discovered in the future. There is a known lode mineral occurrence located along the southern boundary of this unit.</p>
K-63	Mi 640	Map 3-3(b) F010S014W	Manage unit for mineral values and resources.	Unit contains a mineral prospect (ARDF KH008) that consists of a plutonic related mesothermal, shear-hosed Rhyolite having hosted quartz veins with galena. There has been no production and only limited exploration of this mineral prospect.
K-64	Gu 115,528	Map 3-3(b) F005S010W, F005S011W, F005S012W, F005S013W, F006S011W, F006S012W, F006S013W, F007S011W, F007S012W, F007S013W	<p>State land is to be retained and managed for multiple uses.</p> <p>The emphasis is on maintaining wildlife habitat, maintaining recreational opportunities, and ensuring the protection of the important wetland areas included in K-34.</p> <p>Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This extensive unit occupies the generally flat terrain east of the Toklat and Kantishna Rivers almost to the Teklanika River on the east. Vegetation consists of a mix, depending on location, of grasslands, shrub vegetation, wetland complexes and scattered upland forested areas consisting primarily of evergreen forest. Forested areas are somewhat more extensive in the southern parts of this unit, and a mix of wetlands, grasslands, and shrub vegetation are typical in the northern parts of the unit. Moose and brown bear are present. An RS 2477 route (RST 346), the Nenana – Kantishna Trail transverses the southeastern portion of this unit.</p> <p>Note: the more extensive wetland complexes within the external boundaries of this unit have been separated out into individual units (K-34) and are designated Water Resources.</p>
K-65	Se 3,815	Map 3-3(b) F005S012W, F006S012W	<p>The feasibility of further land disposals should be evaluated at both sites, especially around Dune Lake. If found feasible, additional land disposals at one or both lakes are considered appropriate during the planning period.</p> <p>See Chapter 2 requirements. Public access should be maintained to and along the lake to the extent feasible. A public use site, as described in Chapter 2, should be reserved or established in order to ensure access.</p>	Unit consists of two subunits which are situated around lakes (Dune Lake and Totek Lake) and have experienced extensive land disposal activity (ASLS 81-056 and ASLS 81-057, respectively). The area around Dune Lake is well vegetated and may be suitable for additional subdivision activity. Extensive wetlands surround Totek Lake and these areas are probably less suitable for disposal. This unit is closed to mineral entry under MCO 206.
K-66	F	Map 3-3(b)	Manage unit for forest values and resources. Management emphasis will be focused on maintaining the natural character of the unit, while	This unit occupies forested uplands vegetated primarily with evergreen and deciduous forest in the Totek Hills and in the lowlands directly east of

Pole timber and burned timber exist and are considered suitable for biomass uses through access provided by a winter access road. Bear and moose are present. An RS 2477 route (RST 346), the Nenana – Kantishna Trail transverses the eastern portion of this unit.
K-67	Gu 80,412	Map 3-3(b) F008S011W, F008S012W, F009S011W, F009S012W, F010S011W, F010S012W	State land is to be retained and manage unit for multiple uses. The emphasis is on maintaining fish and wildlife habitat and maintaining recreational opportunities. Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state. Public access on RS 2477 Trails will be maintained.	Terrain within this unit is generally level except for the far southern parts, where it is somewhat hilly. Most of the central and southern parts are vegetated with a mix of shrub and evergreen forest, while the northern part is a mix of wetlands and shrub within lowland areas and a mix of evergreen and deciduous forest in the uplands. Moose and bear are present in the unit. The Sushana River and several of the tributaries of the Toklat River, which occupy the lowlands of this unit, are anadromous streams. There are four RS 2477 trails present in this unit. The Nenana – Kantishna Trail (RST 346), the Kobi – Kantishna Trail (RST 343), Rex – Roosevelt Trail (RST 491), and Kobi – McGrath Trail (RST 345) are located in the northern portion of this unit.
K-68	Ha 2,195	Map 3-3(b) F008S012W, F009S012W, F009S013W	Manage unit for its wildlife and habitat values. Retain in state ownership. Given the small size of this unit and its wildlife and habitat importance, development within this unit is discouraged except for uses related to public safety and recreation. Consideration should be given to the establishment of a state critical habitat area. (Legislation to create a critical habitat area is the responsibility of the ADF&G.) Public access on RS 2477 Trails will be maintained.	Unit encompasses an area that is considered extremely productive chum salmon spawning area that is very important to the subsistence and commercial fisheries of the Tanana and Yukon Rivers. This area is also heavily used by brown bears and other wildlife. This area is closed to mineral entry. There are three RS 2477 routes are present within this unit: the Kobi – Kantishna Trail (RST 343), the Rex – Roosevelt Trail (RST 491), and the Nenana – Kantishna Trail (RST 346).
K-69	Se 22,035	Map 3-3(b) F008S011W, F009S011W, F009S012W	Land disposals are appropriate within the planning period. Retain land for purposes of supporting the State’s land disposal program. Development should concentrate in the better drained, forested uplands and avoid the extensive wetland areas occupying central part of this unit and the riverine areas adjoining the major streams and rivers. Maintain RS 2477 routes. LLO 33 affects this unit. See Chapter 2 for specific management guidelines. Public access on RS 2477 Trails will be maintained.	Generally level terrain occupies most of the central parts of this unit, and this area contains an extensive wetlands complex. Parts to the northeast and southeast are, however, relatively hilly and are characterized by a mix of evergreen and deciduous forest. Moose and brown bear are present. The Sushana River and several of the tributaries of the Toklat River, which occupy the lowlands of this unit, are anadromous streams. There are three RS 2477 routes are present within this unit: the Kobi – Kantishna Trail (RST 343), the Rex – Roosevelt Trail (RST 491), and the Nenana – Kantishna Trail (RST 346).

Retain in State ownership. Public access on RS 2477 Trails will be maintained.	uniformly level with vegetation consisting predominately of evergreen forest and deciduous forest mixed with wetlands. Forest resources are particularly prevalent in the Totek Hills and along the Teklanika River. Forest values include upland spruce/hardwood stands and productive riparian spruce stands. Pole timber and burned timber exist and are considered suitable for biomass uses through access provided by a winter access road. Bear and moose are present. Moose and brown bear are present. The uplands around Comma Lake, situated just to the northeast of this unit, are important habitat for several wildlife species, especially moose and furbearers. The Teklanika River is an anadromous stream. There are three RS 2477 routes are present within this unit: the Kobi – Kantishna Trail (RST 343), the Rex – Roosevelt Trail (RST 491), and the Kobi – McGrath Trail (RST 345).
K-71	Ha 7,556	Map 3-3(b) F008S010W, F008S011W, F009S011W, F010S011W	Manage unit for its wildlife and habitat values. Retain land in state ownership. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorization that may be issued will need to avoid or mitigate impacts upon essential moose habitat, wetlands and riverine areas, and other sensitive environmental features.	Unit occupies the Teklanika River and its associated lowlands. Terrain is generally level. Vegetation is, depending on location, a mix of wetlands, evergreen forest, and deciduous forest. Moose and brown bear are present. The Teklanika River is an anadromous stream.
K-72	Gu 97,957	Map 3-3(a) F011S024W, F011S025W, F012S025W, F013S025W, F013S026W, F014S025W, F014S026W	Manage the unit for multiple uses. Development is unlikely within this unit and, except for certain types of utilities and roads, is generally inappropriate. Any development that may occur must carefully consider its impact upon wetland hydrology. Personal wood harvest, especially in T013S025W, is considered appropriate but specific harvest authorizations are subject to DOF approval.	This large unit occupies mostly flat terrain covered by wetlands (primarily in the southern part of the unit) and by somewhat hilly terrain in the west-central and northern parts that is mostly vegetated with mixed forest and scattered deciduous forest. Extensive areas of wetlands are present particularly in the area to the west of Lake Minchumina and south of Lake Snohomish. Personal wood harvest occurs in this area, especially in T013S025W.
K-73	Se 3,104	Map 3-3(a) F013S025W, F013S026W	Unit is considered appropriate for land disposal during the planning period and is to be retained for the purpose of supporting state land disposals. As part of subdivision design, protect lakeshore and wetland areas. See also requirements in Chapter 2. LLO 33 affects this unit.	Parcel encompasses the uplands surrounding Snohomish Lake. Terrain is fairly flat and vegetation consists of wetlands (generally western part) and upland forest (evergreen and mixed deciduous forest in eastern part). A land disposal project area (ADL 417054) occupies the northern half of the unit. The southern half of the unit was to be conveyed to the University of Alaska as part of a legislative grant, but the legislation that would have enable this to occur was ruled invalid by the Alaska Supreme Court. The southern area is now administered as general state land. Moose and brown bear occasionally present within the unit.

These dunes, along with the Toklat River dunes, are one of the largest areas of stabilized dunes in Alaska.</p>

Map 3-3(a): Kantishna Region WEST

Map 3-3(b): Kantishna Region EAST

Parks Highway and West Alaska Range Region

The Parks Highway and West Alaska Range encompasses an area of 4,088,136 acres and is situated in the southeastern and eastern part of the planning area. It encompasses the area, generally described in its north-south orientation, from the Fairbanks area and the northern part of the Tanana Valley State Forest south to the Susitna River and the Denali Highway. In its east-west orientation it extends from the Teklanika and Nenana Rivers on the west to the Tanana River on the east. This large region has a high measure of access, from both the Parks Highway and the Alaska Railroad, and as such it is probably the most accessible of the three regions within the planning area. There are a number of small communities within this area, all of which are situated along the Parks Highway and Alaska Railroad; these include, from north to south, Nenana, Clear, Healy/McKinley Village, and Cantwell. Also included in this region are two boroughs (Denali and Fairbanks North Star). The community of Nenana is situated in the FNS Borough while the Denali Borough, which occupies most of the southern half of the planning region, includes the communities of Cantwell, Healy/McKinley Village, and Anderson (Clear). Two major military reservations exist within the region, including the Fort Wainwright facility in the northeastern part of the region and the Clear Air Force Base, at Anderson. The Denali National Park and Preserve, which is significant for tourism, is located southwest of the region. This region and the proposed management units are depicted on maps 3-4a and 3-4b. Management units along the Parks Highway are depicted in more detail on maps 3-5a, 3-5b, 3-5c, and 3-5d.

Distribution and Characteristics

Land ownership is mixed within this region and, from that perspective, is different than the other regions that contain extensive areas of state land. Native and federally owned land, the latter associated primarily with the Wainwright Military Reservation, comprises 179,930 and 871,750 million acres, respectively. Most of the native owned land is situated in the middle part of the region, while federal land, nearly all of which has been selected by the state, is situated in the east-central and northeastern parts of the region. A small amount of private land, which includes Mental Health Trust Land, also exists; these areas correspond to areas in and near the small communities of the region, areas of settlement or agricultural land disposal conducted in the more western, accessible portions of the region in the last 25 years, and those areas designated Mental Health Trust Land in 1994. There is another 41,000 acres than are owned by the Denali Municipal Entitlement Act⁶.

⁶ Another 9,000 acres remain to be conveyed to the borough.

The dominant land owner within the region, however, is the state, with nearly 2.8 million acres owned by this entity.⁷ Another 1 million acres (of federal land) are selected by the state, but it is problematic as to how much will be conveyed given that native corporations have selected much of this land and over 750,000 acres are associated with the Fort Wainwright Military Reservation. State land is distributed throughout the region, and is found in all parts of the region, but is particularly prevalent in the more remote and inaccessible areas, some of which are considered to have abundant mineral resources.

The area in and around the smaller communities of this region have experienced moderate growth over the last 25 years, reflecting the presence of infrastructure and the accessibility provided, particularly, by the Parks Highway. Much of the land that is now privately owned or owned by the Mental Health Trust in these areas derives from state land disposals or litigation settlements. There have also been several land (settlement) and agricultural disposals and these have contributed to a small amount of growth in the western part of the region near the Parks Highway and Nenana River. Development has also occurred along the Parks Highway, with much of it related to McKinley Village and to mineral (coal) development, in the area east of Healy at the Usibelli Coal Mine. The remainder of the region has experienced little or no growth, reflecting the character of the land and its inaccessibility.

In terms of characteristics, state land is generally flat in area of the Totatlanika Flats, flat to hilly in the westernmost part near the Nenana River and within the drainage of the Yanert and Wood Rivers, and other than these locations, hilly. The remainder of the region consists of the mountainous terrain of the Alaska Range which contains a number of prominent glaciers as well as the associated glacial landforms of the Yanert and West Fork Glaciers. The large central and eastern areas of the region are occupied by several significant river drainages associated with the Yanert and Wood Rivers; there the terrain, which is associated with extensive river floodplains, is generally flat. Within the area of the Totatlanika Flats (a large area north of Township 5 South) vegetation consists of extensive wetlands with, in areas of better drained soils, evergreen and deciduous forest. The westernmost area of the region near the Nenana River is characterized by a mix of evergreen forest interspersed with wetlands and shrub, especially at somewhat higher elevations. Shrub and at higher elevations, tundra, barren rock, or ice and snow (some in the form of glaciers) is characteristic in the remainder of the region, which is characterized by mountainous terrain.

Access, Resources, and Uses of State Land

The Parks Highway and West Alaska Range is considered to have the greatest level of access available within the three regions of this plan. Both the Parks Highway and the Alaska

⁷ Within the planning area there have been a significant number of land disposals during the last 25 years, both for the purposes of settlement and agricultural development, but also including the disposal of state land to the Mental Health Trust in the Trust Reconstitution process, which culminated in 1994. These disposals have reduced considerably the amount of state land within the planning area compared to the conditions that existed in 1985.

Railroad traverse the western part of this region and provide a high measure of access to residences, businesses, and other forms of development along and near the Parks Highway. Local road systems situated in the small communities of this area and roads accessing agricultural and coal resources in more remote areas provide an additional level of access. A number of regional trails, scattered throughout the region, provide access to remote sites.

A variety of resources exist on state land, although the amount of state land within the region has decreased somewhat, resulting from settlement and agricultural land disposals, and conveyances to the Denali Borough and Mental Health Trust. Although the amount of agricultural land particularly has decreased through agricultural land disposals within the region, areas with soils suitable for agriculture remain west of the Seventeen Mile Slough (37,117 acres), extending to the Teklanika River. Areas allocated for settlement have also decreased, especially in the areas within and near the communities of Healy and Nenana. In addition, significant areas of state subdivision and remote recreation staking areas near the Parks Highway and east of the Alaska Railroad/Nenana River have been conveyed out of state ownership. Some settlement land remains and the majority of this is situated within current areas of remote settlement or in several new areas designated for remote recreational staking. Areas with forest resources are primarily associated with the Tanana Valley State Forest (TVSF) but, compared to other state resources, are somewhat less important within this region. Nonetheless, in addition to the areas within the TVSF, areas situated along the Nenana and Teklanika Rivers contain extensive stands of both evergreen and deciduous forests. Bituminous and sub-bituminous coal resources east of Healy in the area of the Usibelli Mine have been mined for over 45 years and continue to produce commercial quantities of coal, which are typically shipped to the Far East. Metalliferous mineral deposits associated with the Bonifield Mining District that are considered to have moderate to high value occupy over 40 townships in the Alaska Range. These are associated with massive sulfide deposits which occur in a belt in the northern part of the Alaska Range. Gold, silver, and other minerals occur in widely scattered deposits. Oil and gas resources are unknown but are expected to be limited.

Wildlife resources within the region are considered to be high. Bear, caribou, moose, as well as other wildlife are present. Caribou are present throughout the region, predominately south of Township 5 South, and much of the more mountainous terrain is considered important as winter habitat. An area of caribou calving occurs near the end of the Stampede Trail in the Wolf Townships. Moose are distributed throughout the region and, depending on location, areas of winter concentration, rutting, and calving occur. A number of anadromous streams occur through the region, the most important of which are associated with the Nenana and Teklanika Rivers.

River valleys, historic trails, and alpine country which are accessible to Fairbanks and to the small communities along the Parks Highway are significant recreational resources in this region. Hunting within this region is especially significant for moose and the area of the Rex Trail is particularly popular for this use. Commercial and personal rafting occurs in the Nenana River, particularly downstream of McKinley Village. The Nenana River provides opportunities for fishing, hunting, rafting, and during the winter months, for snow machining.

Management Constraints

The northern most part of the region is situated within the Fairbanks North Star Borough while the remainder of the region is situated within the Denali Borough. There are, in addition, a number of small communities. Both boroughs have comprehensive plans (the communities do not), but these are 'policy plans' and do not contain a land use plan map that identifies preferred development patterns. The only plan affecting this area is the 1985 Tanana Basin Area Plan. This plan was consulted during the revision process but the recommendations in the 2012 plan revision may not always coincide with those of the initial plan.

Management Summary

The overall management intent for this region is to dispose of some land for agricultural and settlement, retain land with forestry values and (it is recommended) incorporate these into the Tanana Valley State Forest, and retain state land associated with mineral, habitat, and public recreation and to manage state land consistent with these values. The coal resources near Healy are appropriate for continued development, while mineral exploration and subsequent development is considered appropriate within the Alaska Range, which contains the Bonnifield Mining District. Areas of important habitat and public recreation are to be retained in state ownership in order to protect fish and wildlife and to ensure that the public continues to have access to the recreational resources associated with the main rivers and the upland areas that are now being used for recreation.

State land is to be managed consistent with the plan designations and management recommendations (including management intent and guidelines) contained in the Resource Allocation Table for this region. Most state land will be managed in a manner similar to its designation, which means that most will be managed for their habitat, public recreation, and mineral values.

Owing to previous land disposals and settlement conveyances, relatively little state land remains that is considered suitable for settlement. Land disposals are recommended in several new locations, but most areas appropriate for settlement occur within already established subdivision or remote settlement areas. The plan intends that selected areas within current subdivisions or remote settlement are appropriate for disposal. Totalling 204,185 acres, most of these areas are situated near or some distance from the Parks Highway and Alaska Railroad. The amount of agricultural land remaining within the region is also limited, again because of previous disposals, but there are four areas with suitable soils for agriculture remaining, which total 37,117 acres, most of which is situated west of Seventeen Mile Slough and between the Teklanika Rivers. These areas are designated Agriculture. The amount of land designated Forestry is somewhat greater than in the 1985 plan, reflecting newer information and the use of a single plan designation that identifies a primary basis for state land management. Over 46,000 acres of state land are considered to have primary forestry potential. Most of these areas occur near the current boundaries of the

Tanana Valley State Forest and much of this land is recommended as additions to the State Forest. Such areas usually adjoin the State Forest and have similar characteristics of adjacent land within the State Forest.

The further extraction of coal resources at and near Healy is considered appropriate, with over 74,729 acres assigned a co-designation of Coal and Habitat. Coal exploration and development is to be considered generally appropriate in these areas, but any development that occurs must consider and either avoid or mitigate impacts to wildlife during sensitive life-cycle periods and to habitat. This co-designation reflects the important habitat and coal values within this area. Similarly, mining exploration and subsequent development is considered appropriate within the very large area of the Bonnifield Mining District within the Alaska Range. Areas of important habitat occur throughout the region, with the Wolf Townships being particularly significant in terms of this resource. Areas having primarily habitat value are assigned the designation of Habitat (1,272,529 acres). Areas within the Alaska Range are often important for both their mineral and habitat resources; these areas are co-designated Minerals and Habitat (849,579 acres). Certain areas are important as mineral licks; these are specifically identified (P-49) on plan maps and are to be protected (or alternative locations provided) during any mineral (or other) development. Mining is to be considered generally appropriate within these areas, but, similar to the utilization of coal resources, any development that takes place must consider and either avoid or mitigate impacts to wildlife during sensitive life-cycle periods and significant habitat areas.

All general domain state land is open to recreational uses under 11 AAC 96.020 and, except for mountainous, remote, or areas covered by glaciers, receive some amount of recreational use within this region. However, recreational use of state land tends to concentrate within two locations; the area west of the community of Healy in what is known as the Wolf Townships and the area south of the Tanana Valley State Forest in the flat, wetland dominated areas of the Wood, Totatlanika, and Tatlanika River drainages. The area of the Wolf Townships has received considerable attention by the local communities and legislators, and legislation has been introduced to create a State Recreation Area. Other forms of recreation management have been discussed as well. While this plan does not recommend a particular form of recreation management involving the formation of a special purpose site, the management units within this area are co-designated Habitat and Dispersed Recreation and the plan recognizes that a special purposes site focusing on habitat and recreation management would be appropriate, if created.

Resource Allocation Table – Parks Highway and West Alaska Range Region

Recommend inclusion of this unit within the Tanana Valley State Forest.</p> <p>To the extent practicable, timber harvest operations are to be sited so as not to be visible from the George Parks Highway or Goldstream Creek. If this is not practicable, the Forest Land Use Plan should evaluate ways to reduce visual impacts through the use of irregular boundary designs, leave trees, and like design methods.</p> <p>Maintain access and protect the riverine area of Goldstream Creek. Protect cultural resources.</p> <p>See Chapter 2 requirements for additional guidance.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>Unit is vegetated with a mix of evergreen and mixed forest and wetlands, depending on location. Brown bear and moose are present in the unit and this location is associated with moose rutting and calving and is used as a winter concentration area. The George Parks Highway both traverse or about the unit. Goldstream Creek, which meanders extensively, also traverses the unit in an east-west direction as do three RS 2477 routes (RST 66) the Dunbar – Brooks Terminal, (RST 70), the Ester – Dunbar Trail and (RST 1595) the Dunbar – Minto – Tolovana Trail. Cultural resources are present within unit.</p> <p>Unit in 1985 TBAP was a combination of Public Recreation and Settlement, with these classifications scattered throughout the unit. This unit adjoins the Tanana Valley State Forest and has similar vegetative and topographic characteristics of the State Forest. Because of this similarity, and because of the management guidelines that affect this unit, it is more appropriate to designate this unit Forestry.</p>
P-02	Ag 4,683	Maps 3-4(a) & 3-5(a) F002S007W, F003S007W, F003S008W	<p>Manage for agricultural values and resources. Protect cultural resources.</p> <p>(Note: Further agricultural disposals are not considered likely and would only occur if/when state land is not conveyed to an individual or entity or individual for some administrative reason. Should this occur this management guidance (and Agricultural classification) will ensure that this can occur.)</p> <p>See Chapter 2 requirements for additional guidance.</p>	<p>Agricultural land disposals have occurred throughout this parcel and many parcels have been conveyed to individuals. Some, however, remain under contract and it is possible that land may be returned to the state. A small amount of vacant land, classified Agriculture, remains. MCO 510 closes this area to mineral entry. Cultural resources are present within unit.</p>
P-03	F 4,838	Maps 3-4(a) & 3-5(a) F002S006W, F003S007W	<p>Manage for forest values and resources, and for multiple uses consistent with this primary use. Suitable lands will be managed for personal and commercial timber production. Retain in state ownership. Recommend inclusion of this unit within the Tanana Valley State Forest.</p> <p>Maintain access and protect the riverine area of Little Goldstream Creek.</p> <p>To the extent practicable, timber harvest operations should be sited so as not to be visible from the George Parks Highway. If this is not practicable, the Forest Land Use Plan should evaluate ways to reduce visual impacts through the use of irregular boundary designs, leave trees, and like design methods.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p> <p>See Chapter 2 requirements for additional guidance.</p>	<p>This unit consists of two subunits, one in F002S006W and the other in F003S007W, and both are of considerable size (greater than 2,400 acres). Unit is vegetated with a mix of evergreen and mixed forest. Terrain is hilly in the eastern subunit and relatively flat in the western; Little Goldstream Creek and its adjoining level riverine area occupies a considerable part of this subunit. Brown bear and moose are present in the unit and this location is associated with moose rutting and calving and is used as a winter concentration area. Caribou are not present. The George Parks Highways abuts the western subunit.</p> <p>In the 1985 TBAP this unit was co-classified as Public Recreation and Forestry. Both subunits adjoin the Tanana Valley State Forest and have vegetative and topographic characteristics similar to the State Forest. Because of this similarity, it is more appropriate to designate this unit Forestry.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				There is a material site in this unit administered by ADOT/PF under ADL 408768. It is located in F003S007W and spans sections 17 and 20.
P-04	Se 699	Maps 3-4(a) & 3-5(a) F003S007W, F003S008W	Land disposal during the planning period is appropriate. LLO 34 affects a portion of the unit in section 30. See Chapter 2 requirements for additional guidance.	This unit consists of two subunits, one in section 9 and the other in section 30. Terrain is generally level, is suitable for settlement, and this area has been identified for settlement purposes for many years. Other land disposals about the unit. MCO 510 closes this area to mineral entry and MCO 261 partly closes that subunit in section 30.
P-05	Ma 36	Maps 3-4(a) & 3-5(a) F003S007W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of a material site administered by ADOT/PF under ADL 408766.
P-06	Se 640	Maps 3-4(a) & 3-5(a) F003S008W	Manage this unit specific to the various management requirements that affect this area of state land, which follow. The Mental Health Trust Replacement Land must follow the requirements of Department Order 142, the remaining state land in the subdivision is to be retained as an open space tract, and the material site must be managed consistent with the requirements of the DNR authorization. Continued use of the material site is appropriate. Development of the small remaining area is affected by the requirements of the School Trust litigation and the adjudicator is to follow the requirements of Department Order 143.	Parcel consists of several lots that are Mental Health Trust Replacement Land (ADL 229606), a prior subdivision (ADL 82-123), a material sale site (ADL 30743), and vacant land in the western part of the unit. MCO 261 closes this area to mineral entry. Cultural resources are present within unit.
P-07	Ma 20	Map 3-4(a) F004S008W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of a material site administered by ADOT/PF under ADL 409028.
P-08	Pt 40	Map 3-4(a) F004S008W	Manage for sanitary landfill under the authority granted to the City of Nenana under a Public and Charitable lease.	Unit is managed by the City of Nenana as a sanitary landfill (ADL 410092) under a Public and Charitable lease (non-competitive). Landfill may not longer be in operation. Note: expiration date of lease was 1/31/2010.
P-09	Se 40	Map 3-4(a) F004S008W	Land disposal to individuals or municipality under the municipal entitlement program is appropriate during the planning period. LLO 34 affects portions of this unit. See Chapter 2 requirements for additional guidance.	Unit occupies level, well vegetated ground. Previous land disposals (Mental Health Trust Land) about the parcel. A cemetery abuts the unit to the west and the Alaska Railroad, on the east. A MCO partly closes this area to mineral entry.
P-10	Se 640	Map 3-4(a) F004S008W	Manage unit consistent with the requirements of the School Trust litigation and specifically with the requirements of DO 143. Assuming resolution of this litigation, portions of the undeveloped land within this section should be evaluated for further subdivision. If this evaluation finds that additional development is unlikely or inappropriate,	Unit occupies section 36 and is affected by School Trust litigation. This unit occupied by a previous state subdivision (ASLS 80-106) and most of the lots have been conveyed out of state ownership. A number of tracts were created as part of this subdivision. None of these are slated for development and are identified as 'state land' on the plat. It is unclear if

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
			<p>this area is to be retained by the state and managed as open space. Note: Tracts A, D, E, and H, which either abut the George Parks Highway or water, are to be retained in state ownership, to function as a buffer.</p> <p>See Chapter 2 requirements for additional guidance.</p>	<p>these areas are intended to be retained by the state and are to function as a buffer or if the tracts are simply reserved for potential future use. Cultural resources are present within unit.</p>
P-11	F 514	Maps 3-4(a) & 3-5(a) F004S007W	<p>Within section 17, manage for forest resources and values. Within section 16, manage unit consistent with the requirements of the School Trust litigation and specifically with the requirements of DO 143.</p> <p>Assuming resolution of this litigation, this area is also to be managed for its forest values and resources. Recommend the addition of this unit to the Tanana Valley State Forest.</p> <p>See Chapter 2 requirements for additional guidance.</p>	<p>The majority of this unit occupies section 16 and is affected by School Trust litigation. The portion within section 17 is not affected by this litigation and can be managed under general state land requirements.</p> <p>Note: It is intended that the area covered by this unit consist of upland areas. Significant shifts in river location are expected over time and this statement is intended to clarify the location of the unit.</p>
P-12	Ha, Rd 348,547	Maps 3-4(a), 3-5(a & b) F003S005W, F004S005W, thru 007W; F005S004W, thru 007W; F006S004W, thru 007W; F007S003W, thru 007W; F008S003W, thru 007W	<p>Manage unit for its habitat and recreation values. Retain unit in state ownership.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose habitat, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p> <p>Special management requirements may pertain to the Rex Trail; adjudicators should review pertinent files prior to issuing any authorization.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This extensive unit, known generally as the Totatlanika Flats, coincides with management unit 4L1 in the 1985 TBAP. It is characterized by extensive wetlands interspersed by islands of uplands, typically vegetated by evergreen forest. Brown bear and moose are present, and the area is important as a moose calving and rutting area, and is an important moose winter concentration area. The Rex Trail, which is a RS 2477 route (RST 119) the Kobi – Bonnifield to Tatlanika Creek Trail, also known as the Rex Trail, traverses the southern part of this unit. It is a heavily used route by hunters and trappers and has been the subject of special management requirements; see http://dnr.alaska.gov/mlw/rextrail/ for detail.</p> <p>Note: A municipal entitlement selection occupies portions of F008S004W (Sections 13, 14, 23, and 24); this area is excluded from this unit.</p> <p>Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that mineral and coal potential may be discovered in the future. There are mining claims located in the southern portions of this unit and there is a mineral and coal districted located south of this unit.</p>
P-13	Se 23,877	Maps 3-4(a) & 3-5(a) F005S008W, F005S009W, F006S009W, F006S010W	<p>Disposal of the remaining lots within the areas of previous land offerings is appropriate, and after the 2012 offering of this area, additional disposals within the previous offering area will have to be evaluated for suitability, and, depending on resource access (such as timber and camp sites), recreational values, and other settlement considerations, additional areas for staking may appropriate within these areas. Additionally, settlement is appropriate in certain of those areas not included in the three previous offerings. Any future offering must consider the restrictions imposed on previous offerings (nominal 5 acres maximum within 1000' of the</p>	<p>There have been two large remote recreation cabin staking areas (Teklanika, Teklanika II) within this unit over the last 15 years. Another staking area is to be offered in 2012 (Teklanika III). Most lots have been disposed of to private interests. The unit has been expanded northward, along the Teklanika River, to include generally similar areas to the two previous remote staking offerings. MCO 1019 affects nearly all of this unit. An RS 2477 route (RST 346), the Nenana – Kantishna Trail is located in the southwestern area of this unit.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
			<p>Teklanika River), settlement density, woodlots, and retained lands).</p> <p>A riparian protection area of at least 200' shall be provided adjacent to the Teklanika River. This width may be reduced if the 5 acre restriction is imposed along the water front of the Teklanika River.</p> <p>LLO 33 affects portions of this unit.</p> <p>Public access on RS 2477 Trails will be maintained.</p> <p>See Chapter 2 requirements for additional guidance.</p>	
P-14	Gu 16,624	Maps 3-4(a), 3-5(a & b) F005S008W, F005S009W, F006S008W, F006S009W	<p>Manage for multiple uses.</p> <p>Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state.</p>	<p>The Nenana River crosses through this unit and is a dominant geographic and hydrologic feature. Tributaries of both the Nenana River and the Teklanika River are numerous and drain the entirety of the unit. Wetlands are a dominant feature and are distributed throughout the unit. Evergreen forest occupies the better drained soils and upland areas, which is also extensive. Bear and moose are present; moose calving, rutting, and winter concentration areas do not occur within this unit, and situated further eastward, mostly in unit P-12.</p>
P-15	Gu 14,920	Map 3-4(a) F006S010W, F007S010W, F007S011W	<p>Manage for multiple uses.</p> <p>Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state.</p>	<p>Level terrain, occupied by a mix of wetlands and evergreen vegetation, characterizes this unit. Moose and bear are present. Moose calving and winter concentration areas are, however, not present in this unit.</p>
P-16	Ag 14,109	Maps 3-4(a) & 3-5(b) F006S009W, F006S010W, F007S009W, F007S010W	<p>Manage for agricultural values and resources. LLO 33 affects this unit.</p> <p>See Chapter 2 requirements for additional guidance.</p>	<p>Unit is characterized by level terrain and is mostly vegetated with evergreen forest. It is similar in characteristics to P-19, which it abuts to the east; and to P-26, which it abuts to the south. Both of these parcels are designated Settlement. Bear and moose are present within the unit. There</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				is good developed and dedicated access to this unit.
P-19	Se 4,469	Maps 3-4(a) & 3-5(b) F007S009W	No additional development is appropriate within this unit. Land that is transferred back to the state from private ownership is appropriate as Potential Reoffers. See Chapter 2 requirements for additional guidance.	Land within this unit has been the subject of previous land disposals; almost all of the lots have been disposed of within the development area. The unit is fully developed and no additional residential development is possible. Only a few lots remain in state ownership and these are available as Potential Reoffers. There is a municipal selection which adjoins this unit in Section 28 (SE4SE4); see P-66 for details.
P-20	Ha, Rd 7,098	Maps 3-4(a), 3-5(a & b) F005S008W, F009S008W	Manage unit for its habitat and recreation values. Retain unit in state ownership. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose habitat, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.	Unit occupies the uplands adjoining Seventeen Mile Slough. Terrain is level and is vegetated with (primarily) wetlands and, near the slough, by evergreen forest vegetation. Bear and moose are present. The area is an important moose wintering area and is also used for calving and rutting. Black bear fall feeding areas are along the Seventeen Mile Slough and other tributaries of the Nenana River where salmon spawn. The Slough and Julius Creek are both anadromous fish streams. The Alaska Railroad traverses portions of this unit.
P-21	Se 960	Maps 3-4(a) & 3-5(b) F006S008W	Land disposals may be appropriate within this unit during the planning period. Only portions of this unit may be appropriate for settlement, given the wide distribution of wetlands. Determine suitability for settlement prior to the preparation of a Preliminary Decision. The demand for land is likely to be associated with the needs of the community of Anderson. Consult with community to determine the timing and type of development. LLO 33 affects this unit. See Chapter 2 requirements for additional guidance.	Unit is situated directly north of the Clear DEW facility in the small community of Anderson. This unit consists of both state owned and state selected land, which occurs in section 33. The unit is characterized by level terrain, with scattered concentrations of wetlands. Given the fairly wide distribution of wetlands, only portions of this unit may be suitable for settlement. It would be prudent to determine the feasibility of settlement in this unit prior to the preparation of the Preliminary Decision.
P-22	Se 2,280	Maps 3-4(a) & 3-5(b) F006S007W, F006S008W	Land disposals in this unit are appropriate during the planning period. Only portions of this unit may be appropriate for settlement, given the wide distribution of wetlands. Determine suitability for settlement prior to the preparation of a Preliminary Decision. Provide a riparian protection area (vegetated buffer) of 100' adjacent to Fish Creek and a buffer of 100' adjacent to the Parks Highway. LLO 33 affects this unit. See Chapter 2 requirements for additional guidance.	The George Parks Highway traverses this unit in a north-south direction; in addition, several electric transmission lines (ADL 20529 and 30788) affect this unit, and generally follow the alignment of the Parks Highway. Mental Health Trust Land abuts the unit on the west. Unit is generally flat and is vegetated with a mix of wetlands and evergreen forest on better drained land. Moose and bear are present, and portions of this area are part of a moose rutting, calving, and winter concentration area of significant size. This area has been classified Settlement for over 25 years, although no state land disposals have occurred in the unit. There have been private land disposals near this unit, however, and it is appropriate to retain this

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-23	Gu 1,080	Maps 3-4(a) & 3-5(b) F007S008W, F007S009W	<p>The Clear facility, which occupies most of the western part of F007S008W, is state selected land and it is unclear whether or not the state will obtain title to that facility. This facility is also affected by a Public Land Order (PLO 547) and the adjudication of the state selection will not occur until the Clear facility is decommissioned and the PLO lifted (now longer affects) this facility. The General Use designation is assigned to this facility simply to provide a plan designation for this area of state selected land. In the event this area is eventually conveyed to the state, this designation and management intent should be reevaluated. (Note: only that part of the unit that is not situated within the military reservation proper is depicted on plan maps.)</p> <p>The state owned land, situated in the northern part of the unit, is to be managed for multiple uses, although any development that may be authorized there should consider the effect it would have on the use/development of the land that may be conveyed to the state in the remainder of the unit.</p> <p>The municipal selection in section 8 is considered appropriate for conveyance to the municipality, subject to a best interest finding and the determination that the city's remaining entitlement is unfilled. See unit P-97 for details.</p>	<p>unit for settlement, although it would be prudent to determine the feasibility of settlement in this unit prior to the preparation of the Preliminary Decision.</p> <p>This unit includes the Clear Air Force Station and a small amount of state land to the north of that facility (less than 1,200 acres). The Clear facility is a current operating facility and it will continue to function as a PAVE radar facility for an indefinite period of time. The Alaska Railroad traverses a portion of this parcel.</p> <p>There is a small municipal selection by the City of Anderson (ADL 414228) in section 8. See unit P-97.</p>
P-24	Gu 13,057	Maps 3-4(a) & 3-5(b) F007S007W, F007S008W	<p>Manage for multiple uses. The material site and landing strip are considered appropriate uses and are to be retained in state ownership.</p> <p>The material sites are considered an appropriate use and can continue to operate, consistent with the requirements of their authorizations.</p>	<p>This unit is situated immediately to the east of unit P-23, which contains the Clear Air Force Station. Terrain is generally level and vegetation is a mix of wetlands and evergreen forest. This area has been classified Resource Management for over 20 years, although it does not seem to have been included in the 1985 TBAP.</p> <p>The landing strip in sections 15 and 22 is also part of this parcel, for purposes of classification. The airstrip is managed by ADOT/PF under an ILMA (ADL 414754).</p> <p>There are two material sites included in this unit administered by ADOT/PF. Both are located within F007S008W. ADL 408750 is in section 14 and ADL 414378 spans sections 9 and 10.</p>

This area is generally flat and is heavily vegetated with evergreen forest along with a mixture of shrub and wetlands. Portions of the unit are important for caribou habitat (wintering) and for moose habitat (wintering, rutting, and</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
			providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.	calving). Brown bear are present. Note: this parcel is similar to unit P-20 in that it includes the riverine area adjacent to the Nenana River, but differs in location and in the amount of area included in the unit. Specifically, somewhat more upland area is included in section 12 which is not properly part of the riverine area, but is included in this unit because it is to be managed similar to the riverine area. Note: this unit consists of the uplands adjoining the Nenana River. A separate management unit (P-98.1-4) includes the Nenana River itself.
P-33	Ma 164	Maps 3-4(a) & 3-5(b) F008S009W	Manage for material extraction values and resources consistent with its authorization and applicable federal title restrictions. See Chapter 2 for additional siting guidance for future authorizations.	This unit is a material extraction site (ADL 408748) administered by ADOT/PF under an ILMA (59156). This pit was originally federal land (F029383) and is controlled by certain restrictions specific to areas conveyed to the state for purposes of right of way and material sites.
P-34	Ha, Rd 1,553	Maps 3-4(a) & 3-5(b) F008S008W, F008S009W	Manage unit for its habitat and recreation values. Retain unit in state ownership.	Unit consists of remnant areas from a state subdivision (ASLS 79-173) as well as unsubdivided state land west of the subdivision and adjacent to the Nenana River. These areas remain in state ownership, although the remainder of the subdivision (lots) was conveyed to the University of Alaska (ADL 214785). Tracts A (part), B, and C constitute the majority of the unsubdivided remainder of the subdivision. Cultural resources are present within unit.
P-35	Se 18,394	Maps 3-4(a) & 3-5(b) F008S008W	Continued land disposals during the planning period are considered appropriate. Protect easements and maintain public access on RS 2477s. LLO 33 affects this unit. See Chapter 2 requirements for additional guidance.	Unit has been designated Settlement for over 25 years and a number of land disposals, both agriculture and remote recreation, have occurred. Considerable vacant, developable land remains within unit, however. A MCO affects the southern half on this unit. Cultural resources are present within unit. Unit is hilly in southern part but otherwise generally flat. This is considered to be an area important for moose wintering and rutting. A number of easements affect the unit (30788, 415819, and 415820). An RS 2477 Trail (RST 119) the Kobi – Bonnifield Trail to Tatlanika Creek (also known as the Rex Trail), transverses this unit.
P-36	Se 5,600	Map 3-4(a) F008S002W	The feasibility of additional land disposals should be assessed. The area of assessment should include adjacent areas in order to be inclusive. LLO 33 affects a portion of this unit. Protect cultural resources. See Chapter 2 requirements for additional guidance. Public access on RS 2477 Trails will be maintained.	A remote staking area (AS 87-0351) occupies this unit; except for untraced areas, all of the lots and tracts have been conveyed out of state ownership. The remaining areas may be appropriate for additional remote sales. A MCO affects a portion of this unit. Cultural resources are present within unit. An RS 2477 route (RST 462), the Bonnifield Trail, transverses this unit.
P-37	Ha	Maps 3-4(a & b)	Manage unit for its habitat and recreation values. Retain unit in state ownership.	The land occupied by this unit is both in selection status, corresponding to the location of Fort Wainwright Military Reservation, and in state

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
	1,042,855	Various	Given the remoteness and absence of ready access, development within this unit is not anticipated or considered appropriate during the planning period. (And cannot occur within the area that is topfiled by the state, which corresponds to the location of the military base.) Utilities, communication, and other forms of necessary public facilities are, however, considered appropriate subject to an affirmative best interest finding. Maintain public access on RS 2477 routes and other regional trails and protect wetland and riparian areas in any authorization that may be issued.	ownership south of that location, generally south of Township 7S. It is problematic if the state will acquire this land. Adjudicators need to review land status carefully prior to issuing any authorizations. The land encompassed by this unit exceeds one million acres and occupies much of the northeastern and southeastern parts of the region. Its primary value is as habitat and this area is an important moose calving, rutting, and wintering area. Caribou and Dall sheep are also present, generally south of Township 8S. Much of the southern part of the unit is occupied by caribou calving areas. Dall sheep mineral licks are also distributed throughout this general area. See P-49 for distribution. A RS 2477 route, the Bonnifield Trail (RST 462) traverses the western part of this unit. Cultural resources are present within unit.
P-38	Se 1,116	Map 3-4(a) F004S005W	This unit is appropriate for land disposal during the planning period. Protect riparian area adjacent to Wood River; maintain a riverine buffer of 150'. LLO 33 affects this unit. See Chapter 2 requirements for additional guidance.	Unit occupies flat terrain, adjoins the Wood River, and is vegetated with a mix of wetlands and upland evergreen forest. Brown bear and moose are present, and the unit is within an area important for moose wintering, calving, and rutting.
P-39	Se 14,247	Map 3-4(a) F007S001W, F007S002W, F008S001W	This unit is appropriate for land disposal during the planning period. The feasibility of additional land disposals should also be assessed. The area of assessment should include adjacent areas in order to be inclusive. Protect riparian area of Wood River; principal structures are to be setback 200' from the Wood River. During project development, the wild land fire risk will be evaluated and, if necessary, areas may be restricted, or excluded from, development within the proposed development area(s). Public access on RS 2477 Trails will be maintained. See Chapter 2 requirements for additional guidance.	A limited staking project area (ADL 417474) occupies this unit. The Wood River bisects this unit. Only a few areas have been staked since the initiation of this unit and extensive areas of vacant state land remain. The unit is fairly level and is vegetated by evergreen forest adjacent to the Wood River. A RS 2477 route, (RST 462), the Bonnifield Trail crosses the unit. MCO 234 closes the unit to mineral entry.
P-40	Se 3,191	Map 3-4(a) F007S004E	The feasibility of additional land disposals should be assessed but is expected to be limited and would likely require expansion to accommodate enough parcels to the practicable. The area of the expansion would, most likely, be to the southeast. Without project expansion, this unit is considered marginal for additional land disposals. Unit expansion would have to be coordinated with DOF since the adjacent unit, P-41, is designated Forestry and a plan amendment/classification change would be required to effectuate unit expansion. It will also be necessary to consider the effect on the Northern Rail Extension Route that is proposed. Land for this route is to be reserved and if development within 300' of the route is considered, coordinate with the Alaska Railroad Corporation.	Unit occupies flat terrain, adjoins the Tanana River, and is vegetated with a mix of wetlands and upland evergreen forest. Brown bear and moose are present, and the unit is within an area important for moose wintering, calving, and rutting. A remote staking area (AS 87-0200) occupies this unit; except for untraced areas, all of the tracts have been conveyed out of state ownership. The remaining areas may be appropriate for additional remote sales. Unit adjoins the Tanana River. MCOs 117 and 264 affect the unit. The proposed Northern Rail Extension of the Alaska Railroad crosses portions of this unit.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-41	F 14,386	Map 3-4(a) F007S004E, F007S005E, F008S005E	<p>Manage unit for its forest resources and values. Retain in state ownership. Maintain access routes and provide separation (buffer area) between current/future residential settlement.</p> <p>Any future timber sale must consider the effect on the proposed Northern Rail Extension Route. Land for this route is to be reserved and if timber sales and /or development within 300' of the route is considered, coordinate with the Alaska Railroad Corporation.</p> <p>The productive riparian areas should be considered for additions to the TVSF. These include the portions of this unit that are located within sections 12 and 13 in F007S004E and sections 16, 17, 20, 21, 22, 23, 27, 28, 33, and 34 in F007S005E.</p> <p>See Chapter 2 requirements for additional guidance. ADF&G should be consulted prior to any forestry projects to ensure protection of fish and wildlife resources.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This large unit, occupying over 14,385 acres, is generally level except for the southern most parts. Evergreen forest is the dominant vegetation, although extensive wetland areas occupy the central part of F007S004W. Bear, caribou, and moose are present in both subunits. Portions of the unit, generally occupying the central and northern parts of F007S004E are important as a moose wintering, rutting, and calving area. Moose (general range) are present in F007S005E. Several anadromous streams are present. Forest values include extensive stands of productive white spruce as well as upland spruce/hardwood.</p> <p>The unit is traversed by a RS 2477 route (RST 64, the Donnelly – Washburn Trail, and by land use authorization for military movement (LAS 20385). Additionally an easement (ADL 409488) crosses the subunit, and provides access to Mariana and Tanana River remote sales. Settlement areas (within P-40) are situated to the north of the unit. PLO 5187 affects the eastern most part of the unit.</p> <p>The proposed Northern Rail Extension of the Alaska Railroad crosses portions of this unit.</p>
P-42	Se 436	Maps 3-4(a) F008S004W	<p>This unit is appropriate for land disposal during the planning period. It is likely that the only form of settlement may be a small remote subdivision along the Little Delta River.</p> <p>If it is determined that a project of this type is impracticable, it is appropriate to reclassify this unit to Forestry and integrate it into the adjacent forestry unit, P-41. Reclassification and plan amendment will occur with a determination of impracticability by DMLW and the plan and Land Classification Order will be modified by this determination.</p> <p>Protect riparian area adjacent to Little Delta River. A minimum width of 150' (of the riparian area) is to be maintained between riparian areas and proposed harvest activities.</p> <p>Public access on RS 2477 Trails will be maintained.</p> <p>See Chapter 2 requirements for additional guidance.</p>	<p>Unit occupies level, well vegetated terrain and adjoins the Tanana River. A forestry unit (P-41) adjoins the unit to the west and north.</p> <p>Note: until it is determined that this area is viable as a settlement unit, imposition of the LLO is premature.</p> <p>An RS 2477 route, the Donnelly – Washburn Trail (RST 64) bisects this unit.</p>
P-43	Wr, Ha 6,250	Maps 3-4(a & b) F009S011W, F010S010W, F010S011W	<p>Manage unit for its habitat and water resource values. Retain in state ownership.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, and other sensitive environmental features.</p>	<p>Unit occupies the generally flat, well vegetated (evergreen forest with shrub and wetlands) riverine area of the east bank of the Teklanika River. Moose, brown bear, and caribou are present. K-71 and P-25 adjoin this unit on the west (western side of Teklanika River) and to the north, respectively, and both are to be similarly managed. Cultural resources are present within unit.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-44	Se 22,791	Maps 3-4(a & b) F009S010W	Unit is appropriate for land disposal during the planning period. LLO 33 affects this unit. See Chapter 2 requirements for additional guidance.	<p>This unit, which has been classified settlement for 25 years, has not experienced any subdivision, remote staking or recreational cabin land disposals, reflecting the absence of access and the presence of better settlement land to the east near the Teklanika River. Most of the settlement activity that has occurred in the region coincides with the Teklanika River drainage to the east (P-45) including upland areas to the west of that drainage.</p> <p>Much of the unit is generally level except for excised stream valleys in the western part of the unit. Three lakes exist in Section 13 and may be appropriate for remote settlement. Other areas, particularly along well vegetated creeks, may also be appropriate.</p> <p>Vegetation is characterized by evergreen forest in much of the unit, particularly adjacent to river valleys, except for the south-central part of the unit where shrub vegetation is dominant. Moose, caribou, and brown bear are present.</p>
P-45	Se 18,020	Maps 3-4(a & b) F009S009W	Continued land disposal is appropriate during the planning period. Maintain electric transmission easement and provide a screening strip of at least 100', consisting of undisturbed vegetation, along the George Parks Highway. Consult with ADF&G prior to undertaking land disposals bordering the Nenana River Corridor. LLO 33 affects a portion of section 15 in this unit. The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization. See Chapter 2 requirements for additional guidance.	<p>This unit has been characterized by extensive land sales over the last 25 years, especially in the eastern parts of the unit that adjoin the George Parks Highway or can easily access that highway. Nearly all of the lots associated with these areas have been conveyed out of state ownership or will be conveyed once contract conditions are fulfilled. However, large areas within the unit remain vacant and can be considered for remote land sales.</p> <p>Unit is generally flat, well vegetated (evergreen forest) with caribou, brown bear, and moose occasionally present.</p> <p>An electric transmission line (100', ADL 35083) and the George Parks Highway bisect the unit.</p> <p>MCO 233 affects all but state land in section 15.</p> <p>There is a material site administered by ADOT/PF under (ADL 24649) located within this unit in section 25.</p>
P-46	Ha, Rd 761	Maps 3-4(a & b) & 3-5(b) F009S009W	Manage unit for its scenic and water resource values. Maintain the right of way for the George Parks Highway and the electric easement. Additional development of this highway is appropriate, if found necessary in siting studies. Unit is to be retained in state ownership. The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.	<p>Unit occupies a generally level, irregular shape in sections 10, 11, 14, and 15, with much of it functioning as a buffer to the George Parks Highway and the anadromous stream, June Creek. Vegetation is generally evergreen forest mixed with wetlands. Moose, caribou, and brown bear are present; a portion of a caribou wintering area occupies the unit. The George Parks Highway and an electric transmission line (100', ADL 35083) bisect the unit.</p> <p>There is a material site administered by ADOT/PF (ADL 24645) located within this unit in section 10 of this unit.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-47	Co, Ha, Mi 70,970	Maps 3-4(a), 3-5(b & c) F008S006W, F008S007W, F009S006W, F009S007W, F010S006W, F010S007W	Manage unit for its coal and mineral values and resources, and for its important moose and caribou habitats. Any coal or mineral development shall, in addition to the management guidelines of the Fish and Wildlife section of Chapter 2, consider impacts upon sensitive moose and caribou habitats. Consult with ADF&G and OHA prior to issuing an authorization involving a long-term or permanent use. Protect cultural resources.	<p>This unit is important for its bituminous coal resources and for the active (and potential) development of these resources. Usibelli Coal is owner of a number of coal leases and has for many years extracted coal, with production going to both instate domestic sources as well as foreign entities. A number of coal leases (particularly ADL 673538) affect the unit. Surface access is provided to F010S006W. Additionally, this unit has mineral resource attributes similar to those in the Bonnifield Mining District, which is contained within P-50. Numerous mining claims and active APMA's exist. Cultural resources are present within unit.</p> <p>Terrain is mostly hilly, with Jumbo Dome being a prominent landscape feature. Vegetation is primarily shrub but mixed forest is present in the southern part of the unit.</p> <p>Important caribou and moose habitats occupy portion of the unit. The area is an important caribou wintering ground and it is also important for moose calving, rutting, and wintering habitats. Brown bears are present.</p>
P-48	For 18,813	Map 3-4(a), 3-5(a & b) F005S008W, F006S008W, F006S009W, F007S008W, F007S009W	Manage for forest values and resources, and for multiple uses consistent with this primary use. Unit will be managed for personal and commercial timber production. Retain in state ownership and protect riparian areas. Recommend inclusion of this unit within the Tanana Valley State Forest. See Chapter 2 requirements.	<p>This large unit (97,249 acres) is level and well vegetated, with evergreen forest predominating except for areas within F005S008W that are occupied by extensive wetlands. It is bisected by the Nenana River, an anadromous stream, on its western edge and by Lost Slough, also anadromous, on its eastern edge. Portions of this unit are occupied by important riverine areas, many of which contain by wetlands. Settlement areas adjoin the unit on the west in F007S009W.</p> <p>Bear and moose are present. Except, perhaps, for the far eastern parts of this unit, which may contain some moose wintering, rutting, and calving range, the unit is used mostly as range (moose). This unit has been the subject of previous harvests by DOF, and includes a variety of additional sales, which are identified in the 5-Year Sale Schedule.</p>
P-49	Min, Ha 52,298	Map 3-4(b) F010S001W, F010S002W, F011S001E, 001W, 002W, 004W, & 005W; F012S001E, 002E, & 001W, thru 004W; F013S003E, F014S003E, F014S002W,	Manage this unit for its mineral potential, allowing for mineral exploration and development, while protecting the mineral licks for wildlife use. The licks should be managed as a group and some licks should be available to wildlife at all times. Any mineral development shall, in addition to the management guidelines of the Fish and Wildlife section of Chapter 2 and the guideline identified above, consider impacts upon sensitive moose and caribou habitats. Consult ADF&G prior to issuing an authorization involving a long-term or permanent use. See Chapter 2 requirements.	<p>This unit consists of widely scattered parcels that enclose areas of mineral licks important to wildlife. These licks are heavily used, especially in the spring. Dall sheep are particularly known to use these licks.</p> <p>Note: this unit contains the majority of known salt licks, but there are several that are isolated and are scattered throughout the Bonnifield Mining District, contained in P-50, and are not noted here. See also management intent language for unit P-50.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
		F015S002W, F016S004W

Any mineral development shall, in addition to the management guidelines of the Fish and Wildlife section of Chapter 2, consider impacts upon sensitive moose and caribou habitats, and mineral licks. Consult ADF&G and OHA prior to issuing an authorization involving a long-term or permanent use. Protect cultural resources.</p> <p>See Chapter 2 requirements.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This large management unit encompasses the area of the Bonnifield Mining District. This area was originally classified Minerals (actually co-classified with Wildlife Habitat) in the Tanana Basin Area Plan and covered over 40 townships, from F008S007W in the northwest to F013S003E in the southeast. The mineral potential of this area is considered moderate. The most promising potential are associated with twenty small to moderate sized volcanic massive sulfide deposits which occur in a belt along the northern part of the Alaska Range. Various small lode deposits of other types also occur throughout the District, and there are also a large number of placer gold occurrences and mines in this part of the Alaska Range. Cultural resources are present within unit.</p> <p>Terrain is characteristically mountainous and vegetation is predominantly shrub with some evergreen forest in the valley bottoms.</p> <p>The area occupied by the unit is important for both caribou and moose. Caribou wintering areas occur throughout the unit and moose wintering, calving, and rutting areas are scattered throughout the parcel, with especially heavy concentrations in the major river valleys. Brown bear and Dall sheep are also present. A number of Dall sheep mineral licks are distributed throughout the unit; areas with more significant concentrations are included in P-49.</p> <p>Three RS 2477 Routes are located within this unit: (RST 462) the Bonnifield Trail, (RST 119) the Kobi – Bonnifield Trail to Tatlanika Creek, also known as the Rex Trail, and (RST 444), the Healy Creek Trail.</p>
P-51	Co, Ha 3,760	Maps 3-4(b) & 3-5(c) F012S006W	<p>Manage unit for its coal values and resources, and for its important moose and caribou habitats. Any coal development shall, in addition to the management guidelines of the Fish and Wildlife section of Chapter 2, consider impacts upon sensitive moose and caribou habitats. Consult ADF&G prior to issuing an authorization involving a long-term or permanent use. Also consult with the Mental Health Trust prior to authorization issuance, to ensure coordination between coal exploration and development projects.</p> <p>See Chapter 2 requirements.</p>	<p>This unit is important for its bituminous coal resources and the potential development of these resources. A number of coal prospecting permits have been issued in portions of this unit. Surface access is available from the west.</p> <p>Terrain is mostly hilly, with the river valley of Healy Creek being a predominant terrain and hydrographic feature. Vegetation is primarily shrub but mixed forest in present parts of the unit.</p> <p>Important caribou and moose habitats occupy portion of the unit. The area is an important caribou wintering ground and it is also important for moose calving, rutting, and wintering habitats. Brown bears are present.</p> <p>Mental Health Trust Land surrounds this unit and is used or is intended to be used for coal extraction.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that additional mineral potential may be discovered in the future. There are two known placer mineral occurrences within this unit.
P-52	Se 1,280	Maps 3-4(b) & 3-5(c) F011S007W, F012S007W	Authorizations, including disposals, issued by DNR are to meet the requirements of the School Trust litigation; coordinate with the Realty Services section of the DMLW to determine the current restrictions that apply to parcel of School Trust Land. General requirements for actions on School Trust Land are described in Department Order 143.	The unit, consisting of two separate subunits, is part of the School Trust and is subject to the requirements of the litigation. See Department Order 143.
P-53	Ha 40	Maps 3-4(b) & 3-5(c) F012S007W	Manage unit for its habitat values and resources. Alternatively, this parcel may be appropriate for disposal to the Mental Health Trust as Replacement Land. Trust land has extensive holdings throughout this township and abuts this parcel. If unit is to be used in this fashion, the best interest decision must determine that this parcel is appropriate for conveyance to the Mental Health Trust. If the decision makes this determination, the classification of this unit converts to Settlement. Alternatively, in the event that this parcel is not eligible for use as Replacement Land, it may be considered for disposal to other entities. The same procedure for conversion to Settlement applies in this instance as well.	Unit occupies steep terrain covered by a mix of shrub and mixed forest. Brown bear, moose, and caribou are present. It is used as winter range for caribou and as calving, rutting, and winter range for moose.
P-54	Se 22	Maps 3-4(b) & 3-5(c) F012S007W	Appropriate for conveyance to the Denali Borough as part of their Municipal Entitlement, subject to the conditions of the Final Finding and Decision (see Description).	Unit was selected by Denali Borough for conveyance as part of their Municipal Entitlement (Suntrana parcel, ADL 415808). The Final Finding and Decision determined that this parcel was potentially affected by PCB contamination and postponed any action on the selection until this issue is resolved. This selection will be adjudicated in the future when the exact level of contamination is tested and the site remediated, if necessary.
P-55	Ma 40	Maps 3-4(a) & 3-5(b) F003S007W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of a material site administered by ADOT/PF (ADL 408769).
P-56	Ha, Rd 2,162	Maps 3-4(b) & 3-5(c) F013S007W	Manage unit for its habitat and public recreation values. Retain in state ownership.	This unit was the subject of a municipal entitlement selection, but was eventually rejected for conveyance based upon the then current classification in the area plan, Wildlife Habitat and Minerals. As part of the review of the draft Plan Amendment that originally recommended reclassification of this area (to Public Recreation, a conveyable classification under the Municipal Entitlement act, substantial adverse public testimony was received. The final plan amendment (November 2008) determined that it would be appropriate to retain the current classification(s). This area is viewed by the public as an important habitat

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				<p>and wildlife corridor, possesses recreation values, and is considered a scenic viewshed. This plan revision maintains the recommendation of the final plan amendment, although co-designation of this unit is recommended to be Habitat and Public Recreation, which is a more appropriate co-designation given the types of uses and values that characterize this unit.</p> <p>That portion of this unit east of the Nenana River is also affected by a special use designation (ADL 414989), which limits the duration of camping in this area.</p>
P-57	Ha, Min 132,446	Map 3-4(b) F013S001W, thru 004W; F014S001W, thru 004W; F015S002W, F015S003W	<p>Manage unit for its habitat values and resources.</p> <p>Authorizations for mineral development in this unit are to ensure that projects either avoid caribou and moose calving areas or migration corridors, or include stipulations to mitigate impacts. Consult with ADF&G prior to the issuance of long term authorizations.</p>	<p>The calving grounds of the Yanert caribou herd occupy this unit. It migrates only short distances between this unit and the Yanert drainage to the south. Moose and Dall sheep are also present and the unit contains important wintering and calving habitat for moose.</p> <p>North of Grizzly Creek and the south fork of Dean Creek have high potential for gold-bearing and silver-bearing massive sulfide deposits.</p> <p>Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that additional mineral potential may be discovered in the future. This unit contains two known placer and two lode mineral occurrences.</p>
P-58	Ha 97,188	Map 3-4(b) F013S001E, F013S002E, F013S003E, F013S001W, F014S001E, F014S002E, F014S003E	<p>Manage unit for its habitat values and resources. Retain in state ownership.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose habitat, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p>	<p>This very large unit encompasses the mountainous terrain that characterizes much of the region. Most of the area within the central and eastern parts of the unit contains glaciers or features directly associated with glaciation. Westerly of F016S001W and extending to F016S006W, glaciers are generally not present. Vegetation within the westerly area is characterized by alpine vegetation at elevation and by shrub in lower elevations and in the river valleys.</p> <p>Brown bear, Dall sheep, caribou, and moose are present in various parts of the unit. Dall sheep occur in the central and eastern parts, and caribou are present in the western part. For Dall sheep, caribou, and brown bear, this is part of their general range. Moose calving, rutting, and winter concentration areas occur in most of the river valleys in the western part of the unit.</p> <p>Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that additional mineral potential may be discovered in the future. The unit contains four known lode mineral occurrences.</p>
P-59	Ma	Map 3-4(b)	Manage for material extraction values and resources consistent with this	This unit consists of a material site administered by ADOT/PF (ADL 408741).

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
11		F011S008W	authorization. See Chapter 2 for additional siting guidance for future authorizations.	
P-60	Ha, Rd 37,756	Maps 3-4(b) & 3-5(d) F015S006W, F016S006W	Manage unit for its habitat and public recreation values and resources. Retain in state ownership. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential wildlife habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.	Consisting entirely of state land, unit occupies hilly and mountainous terrain just east of the Nenana River in the southwestern part of the region. Vegetation is present as shrub in some areas, while barren rock otherwise predominates. Moose, bear, and caribou are present, and a moose wintering, rutting, and calving areas occur in portions of the unit. There is widespread use of this unit for public recreation, especially hunting. Due to the mineralized nature of land in the vicinity of this unit, there is a possibility that mineral potential may be discovered in the future. Two lode mineral occurrences are located near the southern boundary of this unit.
P-61	Ha, Wr 301,308	Maps 3-4(b), 3-5(c & d) F013S004W, F013S005W, F014S001W; F014S004W, thru 006W; F015S001W, thru 005W; F016S001E; F016S001W, thru 005W; F017S003W	Manage unit for its habitat values and resources. Retain in state ownership. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential wildlife habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.	This large unit encompasses the Yanert River and its adjoining uplands, including its headwaters in F015S002W. The riverine area is characterized by evergreen vegetation and the adjacent uplands, which are mountainous, by shrub and alpine vegetation. While containing some valley glaciers, this unit does not include the extensive glaciated areas to the east that are typical in unit P-58. Brown bears, Dall sheep, caribou, and moose are all present in the unit; moose habitat is considered important, particularly in the valleys where rutting, calving and winter concentrations of caribou occur. Willow stands along the Yanert Fork and tributaries are critical feeding areas for moose. Areas generally south of Township 015S are also used as caribou winter and summer range and for rutting. Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that additional mineral potential may be discovered in the future. There are six known lode mineral occurrences in the eastern portion of this unit.
P-62	Rd 4,165	Map 3-4(b) F018S004W	Unit may be appropriate for disposal to the Denali Borough. The determination of appropriateness is to be made in the adjudication decision for this entitlement. If the adjudication decision of the municipal entitlement selection determines that this unit should be retained by the state, the current plan designation continues.	This unit coincides with a municipal selection by the Denali Borough (ADL 417992). This selection is situated along the north and south sides of the Nenana River and also includes the riverine areas of this river. Only that part of the selection that is situated south of this river is considered appropriate for potential conveyance, with the actual determination of whether the area is appropriate for conveyance to the borough to be made at the time of adjudication. That part of the selection that includes the riverine area and the areas north of the Nenana River retain the classification of Wildlife Habitat, a classification that is not conveyable to municipalities.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-63	Ha, Rd 7,972	Maps 3-4(b) & 3-5(d) F018S008W	<p>Manage unit for its scenic, recreational, and habitat values. If conveyed to the state, retain in state ownership.</p> <p>Authorizations in this unit are generally discouraged and should be limited to temporary uses that do not detract from the viewshed or public access. Any authorizations for permanent uses that may be issued should ensure that the views of the mountains from the highway remain unaffected or include stipulations that minimize adverse effects. Similarly, authorizations should ensure continued access by the public from the George Parks Highway to the remainder of the unit.</p>	<p>This unit contains state land and state selected land along the George Parks Highway. The area is generally flat, contains a number of lakes (including the northern portion of Summit Lake) as well as Cantwell Creek west of the highway. The area adjacent to the highway is generally flat and contains extensive wetland areas. Areas to the east contain a mix of vegetation types, including shrub, wetlands, and forest (evergreen and mixed). Moose and brown bear are present in the unit and the unit contains moose general and rutting habitat.</p> <p>It is used extensively for winter recreation; the viewshed from the highway provides excellent views of mountainous areas to the west and east.</p> <p>Much of this unit remains in state selection status. Both the George Parks Highway and the Alaska Railroad traverse portions of the unit.</p>
P-64	Ha, Rd 52,851	Map 3-4(b) & 3-5(d) F017S006W, F018S004W, F018S005W, F018S006W, F018S007W	<p>Manage for habitat and recreation values and resources. State land is to be retained, to protect the scenic, habitat, and recreational values of this unit.</p> <p>Adjudicators should check land status prior to issuing authorizations. Portions of the unit remain in selection status.</p> <p>Two municipal selections area contained, in part, within this unit. The Nenana River selection (ADL 415812) is not considered appropriate for conveyance to the borough. This unit adjoins significant portions of the Nenana River and the area affected by the selection is designated Habitat and Public Recreation.</p> <p>The other Denali Borough selection (ADL 415813) adjacent to the Nenana River (in F018S004W and described as unit P-62) may be appropriate for conveyance to the Denali Borough, subject an affirmative finding in the municipal entitlement decision. The area of this selection within and north of the Nenana River riverine area is not appropriate for conveyance to the borough and is designated Habitat and Public Recreation.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p>	<p>This unit includes the state owned and selected uplands that adjoin the Nenana River Corridor, P-98.4. (Note: most land within F017S005W is not state-owned or -selected and therefore this unit excludes nearly all of this township.) Terrain is generally level to rolling near the riverine areas. Both lowland areas adjacent to the Nenana River Corridor and the mountainous areas that characterized the remainder of the unit are vegetated by shrub and dwarf shrub vegetation. Cultural resources are present within unit.</p> <p>Areas adjacent to the Nenana River corridor provide prime habitat for moose and caribou and constitute one of the most important recreation areas in the state. Moose, Dall sheep, brown bear, and caribou are all present in this unit. Much of the area is important summer range and rutting area for moose and important as a winter range for caribou.</p> <p>The Nenana River and the adjoining uplands in this unit are highly scenic and are used for a variety of recreational purposes and experience a fairly high level of use. The Reindeer Hills area has good road access and provides good views of the Alaska Range. Hiking is common throughout this area.</p> <p>A municipal entitlement selection (ADL 415812) affected portions of this unit along the Nenana River. The classification of the unit was Wildlife Habitat and Public Recreation at the time of the adjudication in 2008. State land affected by a Wildlife Habitat classification is not conveyable under AS 29.65. The adjudication concluded that reclassification of this area was not appropriate, based upon the high recreation and habitat values that are present. This plan revision reconfirms the value of this area of state land for its recreation and habitat values, and continues to co-</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				<p>designate this unit as Wildlife Habitat and Public Recreation-Dispersed. This area is not appropriate for conveyance to the borough.</p> <p>Another Denali Borough selection adjacent to the Nenana River in F018S004W (and described as a subunit in P-62) may be appropriate for conveyance to the Denali Borough, subject an affirmative finding in the municipal entitlement decision. The area of this selection within and north of the Nenana River riverine area is not appropriate for conveyance to the borough and is designated Habitat and Public Recreation.</p> <p>A material site administered by ADOT/PF (ADL 417419) is located within this unit in section 6 of F017S006W.</p> <p>Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that additional mineral potential may be discovered in the future. Two known lode mineral occurrences are located within the northern block of this unit.</p>
P-65	Ha, Rd 42,452	Map 3-4(b) F017S004W, F018S003W, F018S004W	<p>Manage for habitat and recreation values and resources. State land is to be retained, to protect the scenic, habitat, and recreational values of this unit.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p>	<p>Pyramid Peak is the dominant landscape feature of this unit; an important hydrologic element is Wells Creek, situated to the south of the peak. On Pyramid Peak, vegetation consists almost entirely of shrub; barren rock occupies extensive areas as well. Moose, bear, and caribou are present, and the unit functions as both an important winter and summer concentration area for caribou.</p> <p>Due to the mineralized nature of land both within and in the vicinity of this unit, there is a possibility that additional mineral potential may be discovered in the future. There is one placer occurrence, placer mining claims, and two lode mineral occurrences in this unit.</p>
P-66	Se 1,317	Maps 3-4(a) & 3-5(b) F007S008W, F007S009W	<p>This unit is considered appropriate for land disposal, including conveyance to the Denali Borough, subject to an affirmative best interest finding by DNR of the municipal entitlement selection. In the event that the entitlement decision determines that these areas are not appropriate for conveyance to the Denali Borough, they are appropriate for conveyance to other parties.</p> <p>See Chapter 2 requirements.</p>	<p>This unit consists of several subunits, which occupy land near Clear and a small area in F007S009W. Both sites consist of generally level, vegetated terrain that adjoins other disposals.</p>
P-67	Se 1,034	Maps 3-4(a & b) & 3-5(b) F009S009W	<p>Unit is appropriate for continued land disposals.</p> <p>Principal structures are to be setback 200' from the Nenana River and at least 100' from the George Parks Highway. LLO 33 affects this unit.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p>	<p>Unit occupies an area of level, well vegetated terrain that adjoins the Nenana River on the east and the George Parks Highway on the west. Extensive land disposals have occurred in this unit over the past 25 years. Much of the better terrain has been developed but areas of vacant state land remain, some adjoining the Nenana River and George Parks Highway. MCO 368 affects a portion of this unit.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
			See Chapter 2 requirements.	There are two material extraction sites located within this unit that are administered by ADOT/PF. ADL 24644 is located in section 3 and ADL 24646 is located in sections 11 and 14.
P-68	Ma 11	Maps 3-4(a) & 3-5(c) F011S008W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of a material site administered by ADOT/PF (ADL 408740).
P-69	Ma 22	Maps 3-4(a) & 3-5(c) F011S008W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of a material site administered by ADOT/PF (ADL 408739).
P-70	Gu 14,078	Map 3-4(a) F010S010W	Manage the unit for multiple uses. Development is not anticipated in this unit and is inappropriate except for certain types of utilities, communication facilities, roads, and similar types of projects that provide a general public benefit or for other types of projects if it is determined in their authorization they would be in the overall best interest of the state. Any development that may be authorized must consider impacts upon the caribou wintering habitat.	This large unit (14,077 acres) occupies mostly level terrain except for its southern part, which contains hilly terrain. Except for the areas lining creeks, which contain evergreen vegetation, the vegetation type is almost uniformly shrub. Moose, bear, and caribou are present; a portion of the eastern part of the unit is used by the caribou as a wintering area. Cultural resources are present within unit. A large portion of this unit, generally occupying the center area of F010S010W, is part of a municipal entitlement (Denali Borough).
P-71	Ha, Rd 4,459	Maps 3-4(b), 3-5(b & c) F009S008W, F010S008W, F011S008W	Unit is to be managed for its scenic, recreation, and habitat values and resources. This unit is to be retained in state ownership. To the extent feasible and prudent, authorizations should be limited to facilities that are temporary, visually screened, and sited at least 200 feet from OHW.	Unit occupies the riverine areas adjoining the Nenana River. This area is generally flat and is heavily vegetated with evergreen forest along with a mixture of shrub and wetlands. Portions of the unit are important for caribou habitat (wintering) and for moose habitat (wintering, rutting, and calving). Brown bear are present. Note: this unit consists of the uplands adjoining the Nenana River. A separate management unit (P-98-1) includes the Nenana River itself. The Denali Borough has recommended the development of a regional airport and industrial area, which could occupy part of or the entire unit. However, an area plan is not the appropriate vehicle to make a determination of this type. Feasibility and siting studies, or other pertinent studies, will be required in order to make a determination that this unit is appropriate for a regional airport. A decision of this type is the responsibility of both DNR and ADOT/PF. The state should not dispose of land within this unit in general and definitely not until the aforementioned studies have been completed and a determination made. If it is determined that a regional airport and associated industrial area are appropriate within this unit, a plan amendment and revision of the land classification order will be required.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-72	F 1,019	Map 3-4(b), 3-5(b & c) F010S008W	<p>Manage unit for forestry values and resources, including personal use harvest as well as general forest management.</p> <p>The Forest Land Use Plan that precedes timber harvest is to consider impacts to moose and caribou winter habitat. A screening strip of undisturbed vegetation of at least 100' is to be maintained along the George Parks Highway. Widths less than that amount may be appropriate if a reduced width is effective in providing screening of harvest operations from the highway.</p> <p>See Chapter 2 requirements.</p>	<p>Unit is similar in characteristics to the adjoining parcels to the west. Terrain is level. Rock Creek traverses portions of the unit and this area is important as winter habitat for caribou and moose. Bears are present. Vegetation differs, however, with considerable more area occupied by evergreen and mixed forest. Wetlands and shrub vegetation is more common in the northern part of the unit. A material site is present in this unit. Forest values include productive riparian stands of mixed spruce/cottonwood.</p>
P-73	Se 469	Maps 3-4(b) & 3-5(c) F010S008W	<p>Unit is appropriate for land disposal during the planning period (remote recreational). Continued use of the material site is appropriate. For purposes of land management/land disposal, this unit can be managed in a similar way as the adjacent unit to the west, P-74.</p> <p>Maintain the transmission easement, and, if feasible, provide a screening strip adjacent to the George Parks Highway.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p> <p>See Chapter 2 requirements.</p>	<p>Unit abuts an existing remote staking area (P-74) and is an extension of that unit. Terrain is level with evergreen forest in the easternmost portion of the unit, generally along and adjacent to the George Parks Highway, which bisects the unit. Shrub and wetland occupy the western portions of the unit. MCO 373 affects this unit.</p> <p>Brown bear are present and the general area is important as a moose and caribou wintering range. It is also part of a moose rutting area.</p> <p>Besides the George Parks Highway, an electrical transmission line traverses the unit (100', ADL 30788). Significant portions of the unit are affected by the large right-of-way for the George Parks Highway.</p> <p>There is a material site administered by ADOT/PF (ADL 24653) located in sections 20 and 21 of this unit.</p>
P-74	Se 5,351	Maps 3-4(b) & 3-5(c) F009S008W, F010S008W	<p>Unit is appropriate for continued land disposal during the planning period.</p> <p>Maintain easements and protect anadromous stream. Protect cultural resources.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p> <p>See Chapter 2 requirements.</p>	<p>Unit is occupied by the Healy Remote Recreation Staking area (ADL 417473), and portions of the unit have already been staked, with some areas conveyed out of state ownership. MCO 416 affects this unit. Cultural resources are present within unit.</p> <p>Terrain is level. Vegetation is a mix of wetlands, evergreen forest, and shrub, depending on location. Rock Creek, an anadromous stream, traverses portions of this parcel. Caribou and moose use this area for wintering. The parcel is closed to mineral entry. Two easements affect the unit: ADL 30788 (100' for electric transmission line) and ADL 409478 (100' for access road from George Parks Highway).</p> <p>There is a material site in this unit which is under three authorizations to ADOT/PF; ADL 415776, ADL 419037, and ADL 419259. All are located within sections 6 and 7.</p>
P-75	Ma 14	Maps 3-4(b) & 3-5(c)	<p>Manage for material extraction values and resources consistent with this authorization.</p>	<p>This unit consists of a material site administered by ADOT/PF (ADL 24654).</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
		F011S008W	See Chapter 2 for additional siting guidance for future authorizations.	
P-76	Ha, Rd 3,305	Maps 3-4(b) & 3-5(c) F011S008W, F012S008W	Unit is to be managed for its scenic, recreation, and habitat values and resources. This unit is to be retained in state ownership. To the extent feasible and prudent, authorizations should be limited to facilities that are temporary, visually screened, and sited at least 200 feet from OHW. The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.	Unit is situated between the riverine area of the Nenana River and the Parks Highway, occupying flat topography vegetated by, depending on location, shrub, wetlands, and evergreen forest. Portions of the unit are important for caribou habitat (wintering) and for moose habitat (wintering, rutting, and calving). Brown bear are present. Panguingue Creek is an anadromous fish stream. The Parks Highway forms the western boundary of this unit. A 100' easement for a pipeline crosses the unit (ADL 30788). Cultural resources are present within unit. There is a material site within this unit which is under two authorizations to ADOT/PF; ADL 41577 and ADL 418756. It is located in section 35.
P-77	Se 469	Maps 3-4(b) & 3-5(c) F011S008W	Land disposals are appropriate during the planning period. See Chapter 2 requirements. Protect cultural resources.	This unit is generally level and is well vegetated, and adjoins the George Parks Highway. It has been classified Settlement for the past 25 years and the area to the west and south have been conveyed to the Denali Borough as part of their entitlement. Slate Creek, a non-anadromous stream, crosses through portions of the parcel. MCO 114 affects this unit. Cultural resources are present within unit.
P-78	Se 40,681	Maps 3-4(a & b), 3-5(b & c) F009S008W, F009S009W, F010S008W, F011S010W	Unit is appropriate for continued land disposal during the planning period. Consult with ADF&G prior to undertaking land disposals bordering the Nenana River Corridor. Maintain 200' setback from the Nenana River in F009S009W. Protect cultural resources. LLO 33 affects portions of this unit. See Chapter 2 requirements.	Unit has been classified since the original area plan (1985) as a settlement area, except for the portion within F011S008W, which has not been part of the disposal area. In the area of previous sales (F009S008W, F008S008W), significant sales have already occurred and the land is no longer in state ownership. The area that has not yet been conveyed out of state ownership is designated as a land disposal remote recreation staking area (ADL 417473). The unit is flat and the prevalent vegetation is shrub with significant concentrations of wetlands and evergreen forest. Within F011S008W, the terrain is generally flat with significant stands of deciduous and evergreen forest, especially in the western portion near the Nenana River. This portion has been added to the area previously designated Settlement to the north based on similar characteristics. Land disposals have not occurred in this portion of the unit. Portions of the unit are important moose habitat (wintering, rutting) and the entire unit is significant as a caribou habitat (wintering). Brown bear are present. The Alaska Railroad forms the western boundary of this unit and portions of the eastern boundary border Mental Health Trust Land. MCO 232 affects most of this unit. Cultural resources are present within unit. Due to the mineralized nature of land within the vicinity of this unit and geologic studies, there is a possibility that additional mineral potential

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				may be discovered in the future. The Liberty Bell lode gold mine is located immediately east of this unit.
P-79	Ma 13	Maps 3-4(b) & 3-5(d) F014S007W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of a material site administered by ADOT/PF under ADL 408733. It occupies Tract D of ASLS 83-194.
P-80	Ha, Rd 21,305	Map 3-4(b) F012S010W, F012S011W, F013S010W, F013S011W	Unit is to be managed to protect and maintain its wildlife and public recreation values. Retain in state ownership. Land disposals are not allowed within this unit. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose habitat and other sensitive environmental features.	Unit consists of three separate parcels, generally coinciding with areas of hilly and mountainous terrain in the Wolf Townships. Vegetation consists of dwarf shrub and shrub. The northwestern parcel is important for caribou wintering; moose are present. The three southern parcels are important for moose wintering, rutting, and calving and are also important as caribou wintering areas. Brown bears are also present. There are several small streams but none are known to be anadromous. LLO 16 affects portions of the unit.
P-81	Ha, Rd 11,758	Map 3-4(b) F012S009W, F012S010W, F013S009W, F013S010W	Unit is to be managed to protect and maintain its wildlife, water resource, and public recreation values. Retain in state ownership. Land disposals are not allowed within this unit. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features. Public access on RS 2477 Trails will be maintained.	The Savage and Teklanika Rivers and its associated riverine areas comprise this unit. The riverine areas being vegetated by evergreen forest. Important moose wintering, rutting, and calving areas are present, and the riverine areas are important caribou wintering areas. Brown bears are present in the northern parts of this unit, and significant concentrations occur within the riverine areas in the southernmost portions of these rivers, especially within F013S010W and F013S009W. LLO 16 affects portions of the unit. An RS 2477 route (RST 344), the Lignite –Kantishna Trail, transverses the northern are of both subunits.
P-82	Ha, Rd 21,750	Map 3-4(b) F012S010W, F012S011W, F013S011W	Unit is to be managed to protect and maintain its wildlife and public recreation values. Retain in state ownership. Land disposals are not allowed within this unit. Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features. Public access on RS 2477 Trails will be maintained.	Unit occupies an extensive area of generally level terrain in the Wolf Townships situated west of the Teklanika River and both north and south of mountainous terrain with the adjacent unit, P-01. Except for evergreen forest vegetation along the two rivers within the unit (Sushana and Teklanika), shrub vegetation predominates. Moose and caribou are present throughout the unit, and this area is an important moose rutting, calving, and winter concentration area. This area is included in the range of caribou and brown bear. Besides the two larger rivers within the unit, there are numerous creeks, but none are reported to be anadromous. Two significant RS 2477 routes (RST 340) the Lignite – Stampede Trail and (RST 344), the Lignite – Kantishna Trail, cross the unit in an east-west orientation. LLO 16 affects portions of the unit. Cultural resources are present within unit.

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-83	Ha, Rd 6,281	Map 3-4(b) F012S010W	<p>Manage unit to protect and maintain its wildlife and hydrologic values. Retain in state ownership. Land disposals are not allowed within this unit.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This unit occupies the level to moderately hilly terrain between the major rivers in the Wolf Township, the Savage and Teklanika. Shrub vegetation dominates. Significant habitat values exist, consisting of caribou wintering habitat and moose calving, rutting, and wintering habitat. Brown bear are also present.</p> <p>The Stampede Road and a RS 2477 route (RST 340), the Lignite – Stampede Trail, cross the far northern part of the unit, at the junction of the Savage and Teklanika Rivers. LLO 16 affects portions of the unit.</p> <p>Land disposals have occurred adjacent to the large lakes situated in the center of the unit. Additional land disposals are not considered appropriate, in order to maintain the primitive character of this part of the Stampede Townships.</p>
P-84	Ha, Rd 18,317	Maps 3-4(b) & 3-5(c) F012S008W, F012S009W, F012S010W	<p>Manage unit to protect and maintain its wildlife and hydrologic values. Retain in state ownership. Land disposals are not allowed within this unit.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This large, generally level unit occupies the area just east of the Savage River. Shrub dominates as vegetation. Significant habitat values exist, consisting of caribou wintering habitat and moose calving, rutting, and wintering habitat. Brown bear are also present. The Stampede Road and an RS 2477 route (RST 340), the Lignite – Stampede Trail, cross the northern part of the unit. LLO 16 affects portions of the unit.</p> <p>The area adjacent to and south of Eight Mile Lake were selected by the Denali Borough as part of their municipal entitlement. A recent adjudicatory decision (January 2009; ADLs 415809 and 415810) determined this area to be inappropriate for conveyance to the borough on the basis that the current classifications (Wildlife Habitat and Public Recreation) were appropriate and reclassification to a conveyable classification would be inappropriate and unnecessary. This revision of the TBAP concludes, similarly, that the area of and around Eight Mile Lake should remain Wildlife Habitat and Public Recreation. This area is not appropriate for conveyance out of state ownership.</p> <p>There is a material site administered by ADOT/PF (ADL 418944) located within this unit in section 18 of F012S008W.</p>
P-85	Ha, Rd 21,904	Maps 3-4(b) & 3-5(c) F012S008W, F012S009W, F013S008W, F013S009W	<p>Manage unit to protect and maintain its wildlife and public recreation values. Retain in state ownership. Land disposals are not allowed within this unit.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p>	<p>This parcel is fairly hilly, occupying terrain to the north of Primrose Ridge and Mount Healy, and includes a mountainous portion of Mount Healy in the far southeastern part. Shrub and dwarf shrub characterize this unit, except for the riverine areas adjacent to Dry Creek, which consists of evergreen forest. Caribou are present throughout the unit and the northern part of the unit is important as a winter concentration area. Important moose habitat (wintering, calving, rutting) occurs throughout the unit. Brown bears are present throughout the unit.</p> <p>Due to the mineralized nature of land both within and in the vicinity of</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
				this unit, there is a possibility that additional mineral potential may be discovered in the future. A mineral occurrence is located on the southwestern boundary of this unit.
P-86	Rd, Ha 1,599	Maps 3-4(b) & 3-5(c) F012S008W	<p>Manage parcel for its recreation values and uses, and to protect important moose and caribou habitat, especially adjacent to Panguingue Creek, a wildlife movement corridor. Retain in state ownership. Disposals, including municipal entitlement disposals, are not authorized in this unit.</p> <p>Other than utilities, communication, roads/bridges, and similar facilities providing a public service, development is not appropriate within this unit. Any authorizations that may be issued will need to avoid or mitigate impacts upon essential moose and caribou habitats, wetlands and riverine areas, lake and pond complexes, and other sensitive environmental features.</p>	<p>Occupying generally flat terrain, this unit is situated just north and west of an existing subdivision. This unit has similar characteristics to the area of the subdivision and has been the subject of a recent municipal entitlement decision. In that decision (ADL 415809), it was determined that an important wildlife movement corridor exists, generally coinciding with Panguingue Creek, and that the (then) current classifications of Wildlife Habitat and Public Recreation continued to be appropriate for this area. (Wildlife Habitat is a non-conveyable municipal entitlement classification, and therefore conveyance of land to the borough was precluded.) This plan revision maintains the Habitat and Public Recreation designations for this unit.</p> <p>This unit is important as a caribou wintering area and for moose habitat (rutting, wintering, and calving). Brown bear are present.</p>
P-87	Rd 1,559	Maps 3-4(b) & 3-5(c) F012S008W	<p>State land, which adjoins various branches of Panguingue Creek and other small drainages, is to remain in state ownership and is to be managed for its recreation, scenic, and environmental values, especially habitat. This land is to be retained in state ownership.</p> <p>Land that may be returned to the state as part of previous disposals is considered appropriate for potential reoffer, and for the purposes of reoffer is designated Settlement.</p> <p>Public access on RS 2477 Trails will be maintained.</p>	<p>This parcel consists of a number of previous state subdivisions, the area of which have been conveyed to private interests and the Denali Borough. The only areas of remaining state land adjoin various branches of Panguingue Creek and the central part of the unit. An RS 2477 Route (RST 340), the Lignite – Stampede Trail bisects this unit.</p>
P-88	Se 1,366	Maps 3-4(b) & 3-5(c) F012S008W	<p>Unit is appropriate for residential land disposal and the easternmost unit is considered appropriate for conveyance as a municipal entitlement, subject to the affirmative adjudication of the entitlement decision. In the event that the adjudication decision determines that the easternmost subunit is not appropriate for conveyance to the Denali Borough, it is considered appropriate for disposal to other entities.</p>	<p>Unit consists of two closely situated sub-units which occupy flat terrain and are vegetated with a mixture of shrub, evergreen forest, and mixed forest. It is included within an area identified as important for moose (wintering, rutting, and wintering) habitat and caribou habitat (wintering). The westernmost parcel consists mostly of tundra and the area near Panguingue Creek is an important habitat area.</p> <p>The easternmost subunit is affected by a municipal selection (ADL 415589) and is surrounded by both approved municipal selections (ADLs 415809 and 417602) and by Mental Health Trust Replacement Land (ADL 229606). This subunit is classified Public Recreation, a conveyable classification under the Municipal Entitlement Act. An existing subdivision abuts the parcel to the west. A MCO affects this unit.</p>

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
P-89	Se 1,912	Maps 3-4(b) & 3-5(c) F012S008W	Unit is appropriate for land disposal and is considered appropriate for conveyance to the Mental Health Trust, subject to the terms of the Final Finding and Decision (ADL 229606). It is also conveyable to the Denali Borough, should the unit be determined as unnecessary to the fulfillment of the state requirement for conveyance under the FFD for compensation of land conveyed to the Trust in error. At the present time (2011) this area has not been selected by the borough, since the Mental Health selection predated Denali Borough municipal entitlement applications, and would need to amend its selections to encompass <i>if</i> the requirements of AS 29.65.040 are present and the Department determines that additional selections are appropriate. <i>If</i> this unit is not necessary for trust reconstitution <i>or</i> of interest to the Denali Borough and is necessary for the fulfillment of their entitlement, it is appropriate for disposal by DNR.	Unit includes parcels identified for potential conveyance to the Mental Health Trust as Replacement Land. The adjudicatory decision (ADL 229606) determined that this land was appropriate for designation as Replacement Land and could be conveyed to the Mental Health Trust under certain circumstances. See Final Finding and Decision for specific requirements. This decision (2006) was accompanied by a plan amendment that changed designations (to Settlement), deleted the requirement that portions of the parcel be retained in state ownership, and approved a Land Classification Order (See Plan Amendment and Classification Order that accompanies the FFD) that reclassified the unit to Settlement Land. The westernmost portion of this unit is situated on the north slope of a ridge. Note: Mental Health Replacement terminates on June 12, 2013 unless conveyed to the Trust.
P-90	Hr 124	Maps 3-4(b) & 3-5(c) F012S008W	Manage unit for its cultural and archeology values and resources. Unit is to be retained in state ownership. The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.	Unit encompasses the Dry Creek Archeological Study Site and is managed by DPOR under an ILMT. There is a material site administered by ADOT/PF (ADL 408737) located within the northeastern area of this unit.
P-91	Se 165	Maps 3-4(b) & 3-5(c) F012S008W	Unit is appropriate for land disposal and is considered appropriate for conveyance to the Mental Health Trust, subject to the terms of the Final Finding and Decision (ADL 229606). It is also conveyable to the Denali Borough, should the unit be determined as unnecessary to the fulfillment of the state requirement for conveyance under the FFD for compensation of land conveyed to the Trust in error. At the present time (2011) this area has not been selected by the borough, since the Mental Health selection predated Denali Borough municipal entitlement applications, and would need to amend its selections to encompass <i>if</i> the requirements of AS 29.65.040 are present and the Department determines that additional selections are appropriate. <i>If</i> this unit is not necessary for trust reconstitution <i>or</i> of interest to the Denali Borough and not necessary to the fulfillment of their entitlement, it is appropriate for disposal by DNR.	This unit includes a large area of the community of Healy. Within this unit, most land has been conveyed out of state ownership to private interests. Comparatively few parcels of state land remain. The remaining state land consists of parcels identified for potential conveyance to the Mental Health Trust as Replacement Land. The adjudicatory decision (ADL 229606) determined that this land was appropriate for designation as Replacement Land and could be conveyed to the Mental Health Trust under certain circumstances. See Final Finding and Decision for specific requirements. Note: Mental Health Replacement terminates on June 12, 2013 unless conveyed to the Trust.
P-92	Ma 16	Maps 3-4(b) & 3-5(c) F012S008W	Manage for material extraction values and resources consistent with this authorization. See Chapter 2 for additional siting guidance for future authorizations.	This unit consists of two material sites administered by ADOT/PF under ADL 408737.
P-93	Ha, Rd 1,157	Maps 3-4(b) & 3-5(c)	Manage unit to protect and maintain its wildlife and public recreation values. Retain in state ownership. Land disposals are not allowed within this unit.	Unit consists of a portion of Dry Creek, its riverine area, and its immediate uplands, which are vegetated by a mix of shrub, evergreen forest, and mixed forest. It is included within an area identified as

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
		F012S008W		important for moose (wintering, rutting, and wintering) habitat and caribou habitat (wintering). Brown bear are present.
P-94	Se 970	Maps 3-4(b) & 3-5(c) F012S008W	Unit is appropriate for land disposal. Maintain a setback of 100' from Otto Lake. Public access on RS 2477 Trails will be maintained. See Chapter 2 requirements.	<p>The northern portion of this unit adjoins Otto Lake. Most of Otto Lake is situated in section 25. A series of residence and local roads adjoins this lake. Except for the lake, all of the land in section 25 has been conveyed out of state ownership. Note: Otto Lake is designated Public Recreation-Dispersed.</p> <p>The unit abuts the southern portion of the lake and appears to be appropriate for land disposal. This area is fairly level and is vegetated by a mix of shrub and evergreen forest vegetation. A MCO affects this unit.</p> <p>Brown bear and caribou are present in the unit. It is also an important moose habitat area (wintering, rutting, and calving).</p> <p>An RS 2477 route (RST 709), the Healy – Diamond Coal Mine Trail is located in the northern area of this unit.</p>
P-95	Pr 310	Maps 3-4(b) & 3-5(c) F013S007W	<p>Unit is to be managed to maintain habitat and recreation values.</p> <p>Unit is to be retained in state ownership, but may be used, in part, for the expansion of the George Parks Highway if found necessary.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p>	<p>This unit, of irregular shape, is situated in Sections 6 and 8, and was the subject of a municipal entitlement decision (ADL 415636), which determined that portions of the selection were appropriate for conveyance (generally east of the Parks Highway right of way and adjoining the Nenana River), while the area that constitutes this unit was determined as inappropriate for conveyance because of its value for habitat, as a wildlife movement corridor, and the need to retain this area for potential expansion of the George Parks Highway. The plan designation applied to this unit is consistent with this decision, and the unit is to be retained in state ownership.</p> <p>There is a material site under two authorizations administered by ADOT/PF (ADL 408717 and ADL 419038) located in section 6 of this unit.</p>
P-96	Rd, Pr 123	Map 3-4(b) F007S011W	Unit is to be retained in state ownership and managed for public recreation and to retain access to the Teklanika River.	Unit occupies a small area (about 150 acres) of level terrain adjacent to the Teklanika River.
P-97	Se 135	Maps 3-4(a) & 3-5(b) F007S008W	<p>Unit is appropriate for disposal to the City of Anderson as part of their municipal entitlement, subject to an affirmative best interest finding.</p> <p>In the event that this unit is not conveyed to the city, it is appropriate for disposal to other entities.</p>	Unit occupies a small area (137 acres) of level land in the community of Anderson. Other former entitlement parcels, conveyed to the city or the borough, are situated nearby.
P-98 (a-d)	Ha, Rd 21,525	Map 3-4(b) Various	Unit is to be managed to maintain hydrologic, habitat, wildlife and fisheries, and recreation values. Riverine areas (as well as the river itself)	This extensive unit consists of riverine areas adjacent to the Nenana River as well as the river column itself. Riverine areas are well vegetated and provide essential wildlife habitat and are important for maintenance of

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Description
			<p>are to be retained in state ownership.</p> <p>Management guidelines that apply to all state land are listed in Chapter 2. Some of these may apply to uses within the unit. In addition, the following specific guidelines apply:</p> <ul style="list-style-type: none"> • River crossings should be consolidated and roads shall be located and designed to minimize the impact on views, habitats, and recreational values. • To protect scenic, recreational, and wildlife values, land use authorizations should only be for temporary uses and should be screened from view. Commercial authorizations are allowed, but are subject to the same criteria. <p>Additionally, because of the exceptional recreational and scenic values within subunits 98.2 through .4, these units are recommended to be designated as State Recreation Rivers.</p> <p>The material site is considered an appropriate use and can continue to operate, consistent with the requirements of its authorization.</p>	<p>water quality/quantity, and for purposes of public safety and the protection of scenic resources. Public use of the Nenana River is extensive, especially around the area of McKinley Village, where summer rafting and kayaking is a very popular activity for both residents and tourists. Cultural resources are present within unit.</p> <p>This unit is separated into four subunits. See plan maps for specific locations.</p> <p>Note: Most riverine areas are situated in adjacent upland units, especially in P-71, but this unit also includes other riverine areas. The management requirements (see previous) are to apply to these areas as well.</p> <p>There is a material site located within this unit (ADL 417588) in section 23 of F004S008W. The site is administered by the Toghothele Corporation for gravel removal from the Nenana River. Previous authorizations have occurred at this site.</p>
P-99	Pr 20	Maps 3-4(b) & 3-5(a-d) F012S007W	Use of this land is restricted by federal regulations affecting closed landfills; post-closure activities shall not disturb the integrity of the final cover. Consult with ADEC prior to issuing any authorization.	A closed landfill occupies this unit (ADL 413198).
P-100	Mi, Ha 2,560	Map 3-5(c) F010S004W	<p>Unit is to be managed similar to unit P-50, of which it is a part, and is to be retained by the state unless required for the fulfillment of the municipal entitlement of the Denali Borough.</p> <p>If further adjudication determines that it appropriate to convey this area to the Borough under AS 29.65.030 and that all or portions of this unit is necessary to satisfy this entitlement, that amount of land so required is converted to the designation of General Use and to the classification of Resource Management Land in the Land Classification Order. State land that is not required to fulfill the Borough’s entitlement remains co-designated Minerals and Habitat.</p> <p>This management guideline will continue to pertain until the Borough’s entitlement is fulfilled. Authorizations not involving a disposal of interest may be issued during the interim period. The Denali Borough is to be given the opportunity to comment on any prospective action. Authorizations involving a disposal of an interest in state land may be approved but only with the concurrence of the Borough.</p>	<p>Unit occupies a fairly flat area immediately to the west of Moose Creek and is part of the Bonneville Mining District encompassed in unit P-50. However, it is also affected by a municipal entitlement selection of the Denali Borough.</p> <p>It is unclear if the conveyance of this land to the Borough will be required in order to fulfill their municipal entitlement. Estimates of acreage that are available from other selections would seem to indicate that this land would be unnecessary. However, it is not entirely certain that sufficient acreage exists. For this reason it is appropriate to ensure that this land can be used for this purpose, if further adjudication by DNR determines this to be necessary.</p>

Legislatively Designated Areas

There are three Legislatively Designated Areas (LDA), encompassing a total of about one million acres out of the 11 million acres of state land and state-selected land within the plan boundary. All are located within the Lower Tanana Region, although one of these, the Tanana Valley State Forest, borders the Kantishna region. The LDA's include: Tanana Valley State Forest (460,463 acres), Minto Flats State Game Refuge (497,685 acres), and the James Dalton LDA (78,434 acres). The Department is responsible for the administration of the administration of the land and resources of the Tanana Valley State Forest, Minto Flats State Game, and James Dalton LDA's, while the management of fish and game resources within these areas is the responsibility of ADF&G.

Legislatively Designated Areas are special purpose sites that are managed according to the requirements of the legislation specific to the site and to the general class of LDA⁸, and any subsequent management plans or regulations that implement the requirements of the legislation. The effect of the LDA designation is to reserve state land out of the public domain and use or protect them for the purposes stipulated in enabling legislation.

For these reasons, area plans do not apply to the types of LDAs in the planning boundary, except for the plan designation that is assigned, which is subsequently converted to a land classification in a Land Classification Order. Certain types of authorizations issued by the Department involve a disposal of state land, and administrative regulation requires that the land, with certain exceptions, must first be classified before it is conveyed out of state ownership. In general, the LDAs within the plan boundary are assigned the designations of Forestry, Habitat, Public Recreation and General Use, reflecting the intent of the legislation that created the LDA. These plan designations are not intended to provide the general management direction similar to the way that designations are applied in other parts of this plan, however. Management direction for authorizations within LDAs is provided either through the enabling legislation, state administrative regulation, or a management plan specific to the LDA. If management plans or administrative regulations are not available, the general management intent specific to the LDA or to the category of LDA are to be followed.

The LDAs that are the subject of this discussion are contained in all area-wide plan maps.

The following Resource Allocation Table identifies the three LDAs. It gives their plan designation, management purposes (which are usually related to statutory purposes), and specifies if a management plan exists that guides Department decision making for the specific LDA.

⁸ Article VIII, paragraph 7 of the State Constitution.

Resource Allocation Table – Legislatively Designated Areas

Unit #	Designation(s) / Acres	Map(s) / MTRS	Management Intent	Administrative Aspects and Other
L-01	F 460,463	Various	<p>Tanana Valley State Forest (AS 41.17.400): Land must be managed according to the Tanana Valley State Forest management plan and in accordance with the purposes for establishment of the forest in (AS 41.17.400).</p> <p><i>Note: The Tanana Valley State Forest (TVSF) is classified for Forestry under Land Classification Order Number: CL NC-82-065. This designation information is for reference purposes only. This plan and its Land Classification Order do not affect the classification of the TVSF.</i></p>	<p>This unit contains the sections of the Tanana Valley State Forest that are located within the Lower Tanana Region of the Yukon Tanana Area Plan only.</p> <p>Note: This plan recommends a number of additions to the Tanana Valley State Forest. These sites are, however, to be managed under the requirements of this plan until incorporated into the TVSF. In that instance where the sites are incorporated into the TVSF, the current TVSF management plan will not formally apply to these additions until the management plan is revised. Until this revision occurs, it is intended that such sites shall be managed in a manner comparable to the nearest unit within the then current TVSF management plan.</p>
L-02	Ha, Rd 497,685	Various	<p>This unit is the Minto Flats Game Refuge (A.S. 16.20.037). This unit must be managed according to the Minto Flats Game Refuge Management Plan, adopted in 1992 and the purposes for establishment of the refuge stated in AS 16.20.037. Dispersed recreation uses are appropriate within this refuge.</p> <p>The refuge was established to 1) ensure the protection and enhancement of habitat; 2) ensure the conservation of fish and wildlife; and 3) guarantee the continuation of hunting, fishing, trapping and other uses by the public compatible with the first two purposes.</p>	<p>There are two RS 2477 Trails in the unit. RST 66, the Dunbar – Brook Terminal Trail and RST 1595, the Dunbar – Minto – Tolovana Trail.</p> <p>Mineral entry is prohibited.</p> <p>There are a number of native allotments and private in holdings within the refuge. These areas are not affected by the management stipulations of the refuge (unless they are acquired by the state for the purpose of expanding the refuge).</p> <p>The Old Minto Village is located within this unit. Any action that may be authorized should ensure that the historical resources of this site are protected. The Old Minto site is located on the banks of the Tanana River. Residents of this village, which was settled in 1912, relocated to a new location 25 miles north, which is accessible by road from Fairbanks. Despite relocation from the old site, the people of Minto have maintained a strong spiritual attachment to Old Minto. The cabins, church, community hall, and store buildings still exist today. There are plans for the restoration of several of the buildings at this site.</p>
L-03	Gu 78,434	Various	<p>Unit is to be managed consistent with the requirements of the James Dalton LDA (AS 19.40.010) and the Dalton Highway Master plan. The primary purpose of the LDA is to provide an area for the construction of the Dalton Highway as a year-round route north of the Yukon River to the Arctic Circle. Land within the LDA is to be retained in state ownership except as may be authorized for disposal or lease by DNR but only if consistent with the purposes of the LDA.</p> <p>Check land status prior to issuing authorizations; authorizations are only to be issued for uses on state land.</p>	<p>The Trans-Alaska Pipeline System runs through this LDA and is paralleled by the Dalton Highway.</p> <p>Mineral closing order 529 parallels the Dalton Highway and Trans-Alaska Pipeline System.</p> <p>Coal has been reported within the eastern area unit (F013N011W).</p> <p>Nearly all of the land within this unit is in selection status, topfiled under ANILCA. All selected land is ranked as a ‘high priority’. It is likely but by no means certain that it will be conveyed to the state.</p>

Navigable Rivers and Lakes

Management Intent of Navigable Waterbodies

Background

The intent of the plan is to designate and provide management intent for the shorelands under all navigable waterbodies. There are so many navigable rivers and lakes in the planning area that it is not practical to state the management intent for each individual waterbody. Therefore the plan identifies general management intent and designations for most of the waterbodies within the planning area. In some cases, however, specific designations are identified for a particular waterbody because of the size, uniqueness, or particular values and functions of a river or lake.

The term “shorelands” is defined as land belonging to the state which is covered by non-tidal water that is navigable under the laws of the United States up to the ordinary high water mark as modified by accretion, erosion, or reliction (AS 38.05.965). See Figure 1-1 at the beginning of Chapter 1 for a diagram that illustrates the differences between shorelands, submerged lands, and uplands.

Shorelands are not identified on the plan designation maps. Identification of all such waterbodies is impractical on maps of the scale used in this plan. *The DNR records on navigability and hydrology must be consulted in order to determine whether a specific stream or lake is likely to be navigable.* These records are available in the Public Access Assertion and Defense unit in the Division of Mining, Land and Water in Anchorage.

For further information on the state’s navigability policy, go to <http://dnr.alaska.gov/mlw/nav/>

Public Trust Doctrine

The Public Trust Doctrine provides that public trust lands, waters and living natural resources in a state are held by the state in trust for the benefit of all the people, and establishes the right of the public to fully utilize the public trust lands, waters, and resources for a wide variety of public uses. Each state has the authority and responsibility for managing these public trust assets to assure the public rights are upheld.

The Public Trust Doctrine applies whenever navigable waters or the lands beneath those waters are altered, developed, conveyed, or otherwise managed. It also applies whether the trust lands are publicly or privately owned. Shorelands below the ordinary high water mark

are considered public trust lands. In summary, all submerged lands – including tidelands out to the three-mile-limit and the beds of navigable lakes, streams and rivers – are all public trust lands.

The Alaska Constitution contains numerous provisions embracing principles of the Public Trust Doctrine that require the state to exercise authority to ensure that the right of the public to use navigable waters for navigation, commerce, recreation, and related purposes is protected. In Alaska, the Public Trust Doctrine extends beyond those submerged lands in which the state holds title to include all waters that are navigable. The state's waters are themselves reserved to the people for common use.

The Alaska Constitution (Article VIII, sections 1, 2, 3, 6, 13, and 14) and Alaska Statutes (38.05.127 and 38.05.128) contain some of the provisions, which are the legal basis for applying the Public Trust Doctrine in Alaska. In Alaska, this doctrine guarantees the public's right to engage in activities such as commerce, navigation, fishing, hunting, trapping, and swimming, while also providing for the protection of areas for ecological study.

The Alaska Constitution provides that “free access to the navigable or public waters of the state, as defined by the legislature, shall not be denied any citizen of the United States or resident of the state, except that the legislature may by general law regulate and limit such access for other beneficial uses or public purposes.” The Alaska Supreme Court has concluded “the provisions in Article VIII [of the Constitution] were intended to permit the broadest possible access to and use of state waters by the general public.” *Wernberg v. State*, 516 P. 2d 1191, 1198-9 (Alaska 1973). The Alaska legislature has broadly defined the navigable and public waters available for public use in AS 38.05.965. Moreover, the legislature has endorsed a broad interpretation of the Public Trust Doctrine in Article VIII of Alaska's Constitution in finding that:

“Ownership of land bordering navigable or public waters does not grant an exclusive right to the use of the water and any rights of title to the land below the ordinary high water mark are subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purposes for which the water is used or capable of being used consistent with the public trust.” Sec. 1, Ch. 82, SLA 1985.

The legislature has also declared that the right to use state waters does not include the right to enter or trespass upon private lands. Nevertheless, with 99 percent of Alaska in public ownership at statehood, state laws regarding the transfer of land to private parties provide for public access to navigable waters. For instance, AS 38.05.127 implements the state's constitutional guarantee of access to navigable waters under Article VIII, Section 14. Under the statute, the Commissioner of the Alaska Department of Natural Resources must “provide for the specific easements or rights-of-way necessary to ensure free access to and along the body of water, unless the Commissioner finds that regulating or eliminating access is necessary for other beneficial uses or public purposes.” The State's responsibilities to

implement the Public Trust Doctrine are considered and used throughout this plan. Any management actions will be consistent with the Public Trust Doctrine as defined by the Alaska Constitution, statutes, court decisions, and public involvement.

Management Intent: Specific Rivers and Lakes⁹

Because of their importance for recreation, water resources, and habitat, certain navigable rivers and lakes are given specific use designations. These are listed in Tables 3-1 and 3-2. Anadromous streams and lakes are designated Habitat and those rivers and lakes that are particularly significant for public recreation are designated Public Recreation-Dispersed. In those instances where the stream or lake is important for both purposes, these are co-designated Habitat and Public Recreation-Dispersed. Streams that are neither anadromous nor important for public recreation acquire the designation of the management unit¹⁰ through which they cross and since there may be numerous parcels that may have differing designations, these streams may have varying designations. Consult the plan maps to determine the appropriate designation(s).

Management Intent: Other Rivers and Lakes

The following designations apply to the navigable rivers and lakes *not* specified in Tables 3-1 and 3-2:

Navigable Rivers and Lakes within LDAs.

Anadromous lakes or streams within LDAs are co-designated Public Recreation-Dispersed and Habitat¹¹. Lakes and streams that are not anadromous are designated Public Recreation-Dispersed.

All other Navigable Rivers and Lakes.

The designation and management intent for navigable waterbodies that cross or are surrounded by state land are the same as those of the upland tract, except that those portions of navigable, anadromous streams are designated Habitat.

Navigable rivers and lakes that are not within general state land or LDAs are designated General Use and are to be managed consistent with the public trust doctrine.

⁹ Management of all rivers and lakes are subject to AS 38.05.126 as defined in AS 38.05.965(13) and AS 38.05.965(18).

¹⁰ This assumes that the parcel is owned by the state. Unlike other areas of the state, most of the land within the planning area is either owned by the state or has been selected by the state, so it is likely that a stream is crossing state land.

¹¹ These designations do not apply to LDAs that are state parks.

Table 3-1: Navigable Streams & Creeks

Streams & Creeks	Designation
Bearpaw River	Ha, Rd
Atutsak River	Rd
Baker Creek	Ha, Rd
Beaver Creek	Ha, Rd
Big Salt River	Ha, Rd
Birch Creek	Ha, Rd
Blind River	Rd
Boney Creek	Rd
Cantwell Creek	Rd
Chatanika River	Ha, Rd
Chitana River	Ha, Rd
Cosna River	Ha, Rd
Dugan Creek	Rd
East Middle Fork Nenana River	Rd
Healy Creek	Rd
Hess Creek	Ha, Rd
Hot Springs Slough	Rd
Hutlinana Creek	Ha, Rd
Jack River	Rd
John Hanson Creek	Rd
Kantishna River	Ha, Rd
Little Tonzona River	Ha, Rd
Lost Slough	Ha, Rd
Muddy River	Ha, Rd
Nenana River	Ha, Rd
Ray River	Ha, Rd
Sanneck Slough	Rd
Swift Fork Kuskokwim River	Ha, Rd
Tanana River	Ha, Rd
Tatalina River	Rd
Teklanika River	Ha, Rd
Toklat River	Ha, Rd
Tolovana River	Ha, Rd
Tonzona River	Rd
Totchaket Slough	Rd
Tozitna River	Ha, Rd

Streams & Creeks	Designation
Washington Creek	Rd
West Middle Fork Nenana River	Rd
Williams Slough	Rd
Wood River	Rd
Yukon River	Ha, Rd
Zitziana River	Ha, Rd

Table 3-2: Navigable Lakes

Lakes	Designation
Blair Lakes	Rd
Clear Lake	Rd
East Twin Lake	Rd
Eightmile Lake	Rd
Fish Lake	Rd
Geskakmina Lake	Rd
Grassy Lake	Rd
Jim Lake	Rd
John Hanson Lake	Rd
Kindanina Lake	Rd
Lake Minchumina	Rd
Lake Snohomish	Rd
