Fairbanks, Alaska 99709-3645

INTRODUCTION

The Alaska Department of Natural Resources, Division of Mining and Water Management, Alaska Hydrologic Survey compiled and computerized ground-water and soil data from available reports on the railroad industrial area in Fairbanks, Alaska. This project is part of an **areawide** environmental assessment and hydrogeology study initiated by the U.S. Geological Survey (USGS) in 1993 at the request of the Alaska Department of Environmental Conservation and the Minnie Street Land Users Group (MSLUG), a group of business operators, property owners and leaseholders who have joined together to address potential ground-water contamination at the railroad industrial area (henceforth referred to as the study area). The USGS environmental assessment and hydrogeology study, described in Lilly (1993), defines aquifer boundaries, direction of ground-water flow, and characterizes ground-water quality within the study area. The study will provide MSLUG and other potential responsible parties information in which to implement cost-effective remediation activities.

The objective of this data compilation project is to organize ground-water and soil data from previous studies into a format that can be easily interpreted and mapped to show the types, locations and concentrations of hydrocarbons in the study area. The project was undertaken in a three-step process: (1) compile available reports and documents containing ground-water and soil information, (2) check the quality of the data, and (3) enter the ground-water and soil data into a database.

The primary purpose of this report is to present the database contents to potential users. The report also presents the methods used to compile reports and computerize information, and discusses summary statistics on types and number of analyses in the database.

ACKNOWLEDGMENTS

The authors thank the Alaska Railroad Corporation and other members of the Minnie Street Land Users Group for providing project funding and making historical and recently published reports available to us. We also thank Mike Lilly (USGS) and Anne Kriegler (student intern) who provided us with study area reports, maps, and a list of bibliographic citations.

METHODOLOGY

Report Compilation

The study area is located in Fairbanks, Alaska, and covers approximately 280 acres (fig 1). Land use in the study area is primarily commercial and light industrial. Although numerous site-specific environmental assessment studies have been performed, no **areawide** compilation of soil and ground-water data has taken place.

Reports were obtained from property owners, leaseholders, and other potential responsible parties. Reports and documents were also obtained from the files of the Alaska Department of Environmental Conservation, Northern Regional office; Fairbanks, Alaska.

Figure 1. Location of site-specific reports, railroad industrial area, Fairbanks, Alaska (modified from a map provided by the U.S. Geological Survey)

The majority of reports are environmental studies performed by private consultants for the property owner or lessee.

The reports and references that were compiled and examined are listed in appendix A. The study area map (fig. 1) shows the location and number of each report listed in appendix A.

Database Configuration

Project data are contained in a database entitled "Railroad Industrial Area Database" that uses commercially available dBASE IV software from Borland International, Inc. of **Scotts Valley, California**. A dBASE program was written by the Alaska Hydrologic Survey to enter, access, and print data in the database. The compiled program, referred to as '**MINNIE.EXE**', runs with or without dBASE software.

The database structure consists of five separate dBASE files: **MINNIE.DBF** contains **report-specific** information, and is referred to as the 'site report', **GRNDWTR.DBF** contains ground-water data, **SUBSURF.DBF** contains subsurface soil data, **SURFACE.DBF** contains surface soil data, and **EXCAVATE.DBF** contains excavated soil data. All five files are linked by four common fields: report number, site number, report date, and report title.

The 'site report' file contains general information **about** report contents such as the number of soil boring and monitoring well logs, number of ground-water levels, and the presence of soil and ground-water chemistry data. The site report lists the types and sources of potential contaminants mentioned in the reports. Qualitative information such as the presence of odors, sheens and floating product is also noted.

The four 'chemistry data' files (**GRNDWTR.DBF, SUBSURF.DBF, SURFACE.DBF, EXCAVATE.DBF**) contain quantitative data presented in the reports.

All examined reports have a site report entry in the database, but not all reports have chemistry data.

Data Validation

The guidelines for entering information and data into the database are shown in appendix B. They were developed to ensure that computer entries are consistent and standardized. The 'site report' guidelines show the options for entering information about each report. Twenty-one 'report locations' are specified, which generally correspond to lot boundaries or right-of-way corridors within the study area. A code number is included to enable quick computer sorting by report location. Some reports contain information for several locations. A few reports do not specify a location within the study area or are general in nature.

Guidelines for entering analytical ground-water, surface soil, subsurface soil, and excavated soil data in the 'chemistry data' files are shown in appendix B. The quality of all analytical data was checked prior to data entry. Sample holding times and quality assurance (**QA**) procedures such as duplicate samples, rinsate samples, and precision and accuracy calculations were checked. Data without QA information were entered only when an analytical report issued by a laboratory was present and sample holding times were met. Tabulated data presented in the text without an attached analytical laboratory report were not included in the database.

Data entry of hydrocarbons is categorized by the analytical method used, such as total petroleum hydrocarbons (EPA Method 418.1) and halogenated volatile organic compounds (EPA Method 8010). In most cases a value range (minimum and maximum value) is the data entry because the analytical method analyzes a suite of organic compounds. For example, the purgeable aromatic organic compound analysis (EPA Method 6021, which is commonly referred to as the BTEX test, includes benzene, toluene, ethylbenzene, and xylene.

Value ranges for surface, subsurface, and excavated soil are shown when **multiple** samples were taken from a single boring or point on the ground, **headwall** or stockpile at the same time. Value ranges for ground-water are shown when multiple samples were collected from a single well at the same time.

Discrete data values are shown for benzene, arsenic, mercury, and lead except when multiple samples were taken at one given time. The 'metals' category refers to chromium

and cadmium data unless otherwise noted. Detailed instructions for data entry are given in appendix B.

Quality assurance procedures were also used to verify the reviewer's entries. Initially, Report 23 was reviewed by all three reviewers (authors) for the purpose of reaching consensus on data entry format. Periodic cross-checks of quantitative data were performed throughout the data entry process. An effort was made to eliminate duplicate data because several reports contain previously cited data.

DATABASE CONTENTS

The contents of the database are shown in appendix C. The database is sorted by report location code which is the third and fourth digit in the site number. For example, **79.08.00** corresponds to the Alaska Railroad Right of Way in report 79. Database sorting by 'report location' allows the user to quickly access and evaluate all data for a specific location. In addition, the database has the flexibility to be sorted on any field. This printout format, which was produced and executed with **MINNIE.EXE**, shows the entire suite of ground-water and soil hydrocarbon data for a specific location.

The database contains information obtained from 79 reports. Reports that are either general in nature or not specific to any location are listed first in appendix C. The earliest report was dated 1967; but the majority were dated between 1990 and 1994. **Ground-water** data are contained in 24 reports, subsurface soil data in 23 reports, excavated soil data in 6 reports, and surface soil data in 5 reports.

The following findings are based on site conditions at the time of sampling and may not represent current conditions in soil or ground water. Water data are listed as micrograms per liter (**µg/L**) and soil data are listed as milligrams per kilogram (**mg/kg**) or micrograms per kilogram (**@g/kg**).

Ground-water Analyses

Ground-water data are presented as 163 records for 90 wells. A record corresponds to the suite of analyses for a given well on a given date. Each record is listed as a single table entitled 'CHEMISTRY DATA - GROUND WATER' in appendix C.

Purgeable aromatic hydrocarbons and purgeable halocarbons were the most frequently listed ground-water analyses. Benzene concentrations above the maximum contaminant level (**MCL**) of 0.005 **mg/L** (**ADEC**, 1994) were measured in ground-water collected from 49 of 90 wells (54 percent). Benzene concentrations ranged from **<0.001** to 85 **mg/L**. Purgeable halocarbons, which include chlorinated solvents, were detected in ground-water collected from 34 of 43 wells (79 percent). Most detectable concentrations were less than 0.05 **mg/L**. Gasoline-range hydrocarbons and diesel-range hydrocarbon analyses are available for only five wells and total petroleum hydrocarbon analyses for 11 wells. These hydrocarbon analyses appear to be used only for screening purposes.

Herbicides were undetected in ground water collected from 11 wells. Polychlorinated biphenyls (**PCBs**) in ground water collected from three wells show no concentrations above

analytical detection limits. Arsenic and mercury concentrations in ground water collected from 11 wells do not exceed the **MCLs** of 0.05 **mg/L** and 0.002 **mg/L**, respectively. Lead in ground water was measured above the action level of 0.015 **mg/L** (ADEC, 1994) in one well, at a concentration of 0.055 **mg/L**.

Subsurface Soil Analyses

Subsurface soil data are presented as 199 records for 198 borings or wells. The record represents the suite of subsurface soil analyses for a given well or boring on a given date. Each record is listed as a single table entitled 'CHEMISTRY DATA - SUBSURFACE SOIL' in appendix C.

Gasoline-range hydrocarbons in soil from 11 borings or wells exceed the Level A cleanup level of 50 **mg/kg** (ADEC, 1991). The maximum concentration measured was 12,500 **mg/kg**. Diesel-range hydrocarbons (**DROs**) in soil from 20 borings or wells exceeded the Level A cleanup level of 100 **mg/kg** (ADEC, 1991). The maximum DRO concentration was 29,000 **mg/kg**.

Benzene in subsurface soil exceeded the Level A cleanup level of 0.1 **mg/kg** (ADEC, 1991) in 17 of 130 borings or wells (13 percent). Total BTEX concentrations in subsurface soil exceeded the Level A cleanup level of 10 **mg/kg** in 28 of 123 borings or wells (23 percent). The maximum BTEX concentration was 47,000 **mg/kg**.

Halogenated volatile organic compounds in soil were detected in 10 of 20 borings or wells at concentrations ranging from 0.04 to 1.2 **mg/kg**. Polychlorinated biphenyls in soil were detected once at a concentration of 0.09 **mg/kg** in one of eight sampled borings. Herbicides in soil were undetected in all 5 borings or wells sampled.

Twenty-five of 59 borings or wells sampled (42 percent) had soil with concentrations of arsenic greater than 200 **mg/kg**. Similarly, 25 of 57 borings or wells sampled (44 percent) had soil with concentrations of mercury greater than 10 **mg/kg**. Most of these samples were collected at a gold-processing facility. Lead concentrations greater than 500 **mg/kg** were measured in one of 27 borings or wells.

Surface Soil Analyses

Surface soil data are presented as 108 records. A record corresponds to a grab surface soil sample. Each record is listed as a single table entitled 'CHEMISTRY DATA - SURFACE SOIL' in appendix C.

Benzene in surface soil samples did not exceed the Level A cleanup level of 0.1 **mg/kg** in any of the 17 soil samples. Total BTEX concentrations exceeded the Level A cleanup level of 10 **mg/kg** in one of 17 samples.

Polychlorinated biphenyls (**PCBs**) were detected in 22 of 42 surface soil samples. The majority of detectable PCB concentrations were less than 1 **mg/kg**; the maximum concentration was 18 **mg/kg**. Herbicides were detected in one of 6 samples at a trace concentration (0.02 **µg/kg**).

Arsenic concentrations in surface soil ranged from 12 to 2900 mg/kg. Arsenic concentrations greater than 200 **mg/kg** were measured in 9 of 53 samples; mercury concentrations greater than 10 **mg/kg** were measured in 5 of 47 samples; and lead concentrations greater than 500 **mg/kg** were measured in 2 of 23 samples.

Excavated Soil Analyses

Excavated soil samples are presented as 104 records. A record corresponds to a grab sample collected from a soil stockpile or the sidewall of a soil excavation pit. Each record is listed as a single table entitled 'CHEMISTRY DATA - EXCAVATED SOILS' in appendix C.

Gasoline-range hydrocarbon and BTEX analyses of excavated soil were performed on 87 and 9 1 samples, respectively. The maximum concentration measured for gasoline-range hydrocarbons was 13,700 mg/kg. The maximum benzene concentrations was 71 mg/kg, and the maximum BTEX concentration was 4525 mg/kg.

SUMMARY

The database contains groundwater and soil information presented in 79 reports on the study area. The most frequently mentioned potential source of hydrocarbons in the subsurface soil and ground water is surface spills of petroleum products. Gasoline is the most frequently mentioned potential soil and ground water contaminant.

The database is designed for personal computer (PC) applications, such as quickly accessing data for a specific location in the study area. Use of database files requires dBASE IV software. The database can still be accessed without installing dBASE IV by executing '**MINNIE.EXE**', a compiled version of the database. The database can be viewed on a PC at the Alaska Division of Mining and Water Management, Alaska Hydrologic Survey offices in Anchorage and Fairbanks, Alaska. The dBASE files and the '**MINNIE.EXE**' program are available on diskette for a nominal charge from the Division of Geological and Geophysical Surveys office in Fairbanks.

The database is not a final project product but is provisional and subject to periodic revision and updating. The authors are solely responsible for its content and will appreciate comments on the accuracy of the data as well as suggestions to improve the database.

APPENDIX B.

Guidelines for database entry of report information and chemistry data

SITE REPORT GUIDELINES

FIELD

ANSWER OPTIONS

Report number?	As stated on USGS Reference & Report List (see appendix A) 01, 02, 03 , etc.																																										
Site number?	Combination of report number (e.g. 02) and report location code (e.g. 02.00) For example, 02.02.00, 79.08.00 SEE 'CODE' UNDER REPORT LOCATION, BELOW																																										
Report date?	As stated on page 1 of report. If no date, refer to USGS Reference & Report List. If month and year is listed e.g. May 1992, enter 05/01/92 . If year only is listed (e.g. 19921, enter 01/01/92																																										
Report title?	As stated on USGS Reference & Report List																																										
Report by?	Author, as stated on USGS Reference & Report List																																										
Report location?	<table><tr><th><u>Code</u></th><th><u>Write out</u> name of site (from following list):</th></tr><tr><td>_.01.00</td><td>Petroleum Sales</td></tr><tr><td>_.02.00</td><td>Saupe Enterprises</td></tr><tr><td>_.03.00</td><td>Willner's Texaco</td></tr><tr><td>_.04.00</td><td>Nerland's / Alaska Feed Company</td></tr><tr><td>_.05.00</td><td>VanGas (Suburban Propane)</td></tr><tr><td>_.06.00</td><td>Alaska Gold</td></tr><tr><td>_.06.01</td><td>on Driveway St.</td></tr><tr><td>_.06.02</td><td>612 Illinois St.(aka USSR&M site)</td></tr><tr><td>_.07.00</td><td>Sourdough Express</td></tr><tr><td>_.08.00</td><td>Alaska Railroad Right of Way</td></tr><tr><td>_.08.01</td><td>Eielson Branch</td></tr><tr><td>_.08.02</td><td>Oil Ave.</td></tr><tr><td>_.08.03</td><td>Charles St.</td></tr><tr><td>_.09.00</td><td>City Streets</td></tr><tr><td>_.09.01</td><td>Driveway Street</td></tr><tr><td>_.09.02</td><td>Oil Avenue</td></tr><tr><td>_.09.03</td><td>Charles Street</td></tr><tr><td>_.09.04</td><td>Illinois Street</td></tr><tr><td>_.09.05</td><td>College Road</td></tr><tr><td>_.09.06</td><td>Phillips Field Road</td></tr></table>	<u>Code</u>	<u>Write out</u> name of site (from following list):	_.01.00	Petroleum Sales	_.02.00	Saupe Enterprises	_.03.00	Willner's Texaco	_.04.00	Nerland's / Alaska Feed Company	_.05.00	VanGas (Suburban Propane)	_.06.00	Alaska Gold	_.06.01	on Driveway St.	_.06.02	612 Illinois St.(aka USSR&M site)	_.07.00	Sourdough Express	_.08.00	Alaska Railroad Right of Way	_.08.01	Eielson Branch	_.08.02	Oil Ave.	_.08.03	Charles St.	_.09.00	City Streets	_.09.01	Driveway Street	_.09.02	Oil Avenue	_.09.03	Charles Street	_.09.04	Illinois Street	_.09.05	College Road	_.09.06	Phillips Field Road
<u>Code</u>	<u>Write out</u> name of site (from following list):																																										
_.01.00	Petroleum Sales																																										
_.02.00	Saupe Enterprises																																										
_.03.00	Willner's Texaco																																										
_.04.00	Nerland's / Alaska Feed Company																																										
_.05.00	VanGas (Suburban Propane)																																										
_.06.00	Alaska Gold																																										
_.06.01	on Driveway St.																																										
_.06.02	612 Illinois St.(aka USSR&M site)																																										
_.07.00	Sourdough Express																																										
_.08.00	Alaska Railroad Right of Way																																										
_.08.01	Eielson Branch																																										
_.08.02	Oil Ave.																																										
_.08.03	Charles St.																																										
_.09.00	City Streets																																										
_.09.01	Driveway Street																																										
_.09.02	Oil Avenue																																										
_.09.03	Charles Street																																										
_.09.04	Illinois Street																																										
_.09.05	College Road																																										
_.09.06	Phillips Field Road																																										

10.00	Alaska Chevron
11.00	Kelly's Firestone
12.00	Craig Taylor Sales/Service/Rental
13.00	Downtown Gas
14.00	Golden Valley Electric Assoc.
15.00	OK Lumber
16.00	Sig Wold Storage & Transfer
17.00	R & S Machine
18.00	Samson Hardware
19.00	Fairbanks Municipal Utilities System
20.00	K & W Trucking
21.00	Lucky Sourdough Gasoline Station

Prior ownership?	Choices: Name of prior owner(s) or lessee company(ies) or not mentioned
Water level only?	Y or N
Number of wells?	<u>Screened</u> wells, based on number of <u>well logs</u> in report
Number of borings?	Based on number of <u>soil borina logs</u> in report Rationale: a boring is a hole that is not cased or screened, and is sampled only at the time it is logged
Number of surface samples?	Count
Number of GW levels?	Count; from text, and check the wells & boring <u>logs</u> at the time of drilling
Permafrost?	Y or N or not mentioned
Surveyed?	Y or N Based on whether the latitude\longitude, or the bearings are listed for wells or borings
Maps?	Y or N Based on whether the map(s) shows the location of wells and borings
Photos?	Y or N
Surface stains?	Y or N or U for Unmentioned
Stained soils?	Y or N or U for Unmentioned (Based on subsurface staining)
Oily soil odor?	Y or N or U for Unmentioned
Oil odor to soil?	Y or N or U for Unmentioned
Sheen on water?	Y or N or U for Unmentioned

Floating product?	Y or N or U for Unmentioned
Types of potential sources mentioned?	List symbol(s) from following list: G Gasoline tanks (surface bulk or buried; spills & leaks) AG Above ground gasoline tanks UG Underground gasoline tanks D Diesel tanks (surface bulk or buried; spills & leaks) AD Above ground diesel tanks UD Underground diesel tanks O Heating oil tanks (surface bulk or buried; spills & leaks) P Surface spills of petroleum products S Surface spills of organic solvents M Old mine refining activities F Floor drains w Waste oil
Types of potential contaminants mentioned?	List symbol(s) from following list: G Gasoline D Diesel O Heating oil S Solvents H Herbicides P PCBs M Heavy Metals w Waste oil
Report includes subsurface soil chemistry data?	Y or N (Based on presence of <u>new</u> soil boring data in report; answer immediately accesses Subsurface Soil table)
Report includes surficial soil chemistry data?	Y or N (Based on presence of <u>new</u> surface soil grab data in report; 'Y' answer immediately accesses Surface Soil table)
Report includes groundwater chemistry data?	Y or N (Based on presence of <u>new</u> GW data in report; 'Y' answer immediately accesses Ground Water table)
Report includes bulk excavation data?	Y or N (Based on presence of <u>new</u> evacuation-pit soil or soil stockpile grab data in report; 'Y' answer immediately Excavated Soil table)
Interpretative hydrology?	Y or N (Based on presence of any of following: GW flow direction/gradient narrative, water-table contour map, plume map)

QA/QC in report: Y or N (Based on presence of replicate samples, rinsate samples, precision & accuracy info.)

Reviewer: Name of person filling in this questionnaire

GENERAL GUIDELINES FOR CHEMISTRY DATA

1. Check text summary or site summary of report regarding the most important points about ground-water and soil data.
2. Work off text tables to get ranges and BTEX sums (it may be quicker than appendices).
3. For gross **QA/QC** check, check every 5th data-range entry in text tables against data listed in analytical report.
4. For gross **QA/QC** check, check to see if rinsate samples are clean. If not, omit data where rinsate and sample concentrations are same order of magnitude.
5. For gross **QA/QC** check, check holding times to see if **they** meet EPA requirements, especially the 14-day holding time for BTEX analyses for soil and water.

SPECIFIC GUIDELINES FOR CHEMISTRY DATA TABLES

<u>FIELD</u>	<u>ANSWER OPTIONS</u>
Report number:	This field is pre-set, based on the information given on report entry sheet
Site number:	This field is pre-set, based on the information given on report entry sheet
Report date:	This field is pre-set, based on the information given on report entry sheet
Report title:	This field is pre-set, based on the information given on report entry sheet
Sample #:	The well ID or boring ID in report (Refer to the USGS's 'ARRCI Well Tracking Form' and ARRCI Soil Boring Tracking Form')
Sampling date:	Refer to analytical report
USGS #:	Refer to USGS's ARRCI Well Tracking Form and ARRCI Soil Boring Tracking Form

IMPORTANT: When entering values for the 'CONTAMINANTS' in the data tables, enter one value if there is a SINGLE sample. If there are multiple samples collected at the same date and time in a specific soil boring, soil surface grab, soil excavation pit sampling point, or groundwater well, ENTER RANGE OF VALUES, that is, the maximum and minimum values in two or more samples,

REMEMBER: Soil excavation pit samples from a **highwall** or from a vertical profile, or stockpile are treated as individual excavation pit soil data.

REMEMBER: Range of values will ALWAYS be entered for:

Halogenated Volatile Organics (8010)

Aromatic Volatile Organics (8020)

Purgeable Halocarbons (601)

Purgeable Aromatics, BTEX (602)

PCB'S (EPA METHOD 8080)

Herbicides (EPA METHOD 8150)

BECAUSE THESE FIELDS REPRESENT A GROUP OF ORGANIC COMPOUNDS OR CONSTITUENTS

IMPORTANT: When entering data for aromatic volatile **organics** (8020) or purgeable aromatics **(602)**, consider BTEX compounds and chlorobenzene, **1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene**

IMPORTANT: The BTEX sum is the sum of benzene, toluene, ethylbenzene, and xylenes. If sample or samples show that all BTEX compounds are below detection limit, enter the detection limit with the LOWEST resolution

IMPORTANT: other metals refer to cadmium and chromium, unless otherwise specified.

DL = detection limit on chemistry tables.
