

The Alaska Plant Materials Center is proposing to discontinue the maintenance and production of the varieties listed below for both field and tissue culture. This proposed removal is based on long-term program capacity, grower demand trends, and overall collection management needs. We invite growers and members of the public to review this list and submit any objections or requests for continued maintenance of specific varieties. All objections must be submitted in writing by 1/31/2026 for full consideration. Please see Objection form on continued page.

Drop In Field and TC

772	MegaChip	Gui Valley
