

Moose Creek East Remote Recreational Cabin Sites

VICINITY MAP
SCALE: 1" = 2000'
INDEX SHEET

NOTES:

- There may be Federal, State and local requirements governing land use. It is the responsibility of the individual parcel owner to obtain a determination whether such requirements apply to the development of the parcels shown hereon.
- No part of a subsurface sewage disposal system shall be closer than one hundred (100') feet from any body of water or water course.
- No individual water supply system or sewage disposal system shall be permitted on any lot unless such system is located, constructed and equipped in accordance with the requirements, standards and recommendations of the State of Alaska, Department of Environmental Conservation which govern those systems.
- This survey was accomplished in accordance with A.S. 38.05.600, GSC 725 & GSI 2006-22.
- All bearings shown are true bearings as oriented to the Basis of Bearing and distances shown are reduced to horizontal field distances.
- The accuracy of this survey is greater than 1:5000.
- All parcels of land owned by the State of Alaska, located within 50.00 feet of, or bisected by a surveyed or protracted section line, are subject to a 50 foot (50') easement, each side of the section line, which is reserved to the State of Alaska for public highways under A.S. 19.10.010.
- The existing lessees' claim corners were recovered and used to control the location of the tract boundaries.
- The natural meanders of the ordinary high water form the true bounds of Tracts A, B, C, D, E, F, G, and H. The approximate ordinary high water (OHW), as shown, is for area computations only, with the true corners being an extension of the sidelines and their intersection with the natural meanders.
- The Matanuska-Susitna Borough is not responsible for road construction or road maintenance.
- Protracted Sections as shown are based on BLM Protraction information and are only approx. until these lines are surveyed.
- There is greater than one percent chance that any part of the platted area will be inundated by the Base Flood Event in any given year in Tracts A-H. There is a less than one percent chance that any part of the platted area will be inundated by the Base Flood Event in any given year in Tract I.
- BASIS OF BEARING:** The Basis of Bearing for this plat was determined by high precision GPS survey using Trimble 5700 receivers, differentially corrected and processed using Trimble Geomatics Office
- BASIS OF COORDINATES:** The coordinates depicted on the plats are based on a tie to a monument of record using high precision GPS survey techniques. The bearing and distances obtained were applied to the record NAD 1927 position to compute the NAD 1927 and NAD 1983 positions of corner 1 of each tract.
- There is a 100' Building Setback from all water bodies.
