## ILLINOIS CREEK MINE - ROUND TOP CU MO PROJECT - HONKER GOLD PROJECT

May 14, 2020

Email letter Alaska Department of Natural Resources/Mining Section 3700 Airport Way Fairbanks, Alaska 99709

Re: APMA No. 9831 Amendment #2

Attn: Mr. David Charron

Mr. Charron,

Please accept this application for Amendment #2 to APMA/MLUP No. 9831. Western Alaska Copper and Gold (WACG) is submitting this APMA/MLUP amendment to execute a drilling and sampling program on State lands within the boundaries of the WACG's state mining claim block in the vicinity of the past-producing Illinois Creek Mine.

Through this amendment WACG is proposing drilling starting this upcoming 2020 summer field season on its Illinois Creek claim block, the location of which is illustrated on Figure 1.

WACG intends to drill approximately 83 drillholes in the target areas highlighted in Figure 2. This includes approximately 60 shallow drill holes and several shallow pits to sample the run-of-mine material on the historic heap leach pad as illustrated in Figure 3. The drill and trench samples will be analyzed for gold and silver as part of an evaluation of the economics of reprocessing this heap leach material to recover the remaining gold and silver. The other drilling includes approximately 26 diamond core drillholes adjacent to the Illinois Creek Mine Central and West pits, and in the 5 O'clock, Gossan Hill and IC West target areas as illustrated in Figure 2.

Shallow drilling at the heap leach pad will be completed using reverse circulation drilling and a casing advancer, which does not require water. Drilling the core holes in the other target areas will be done using conventional core drilling techniques that will require some water.

As part of this APMA Amendment WACG is also hereby applying for a temporary water use authorization for two locations as shown on Figure 4 and described as:

- 1. Slough of Little Mudd River located in SW1/4 Section 17, T.017S., R.005E. Kateel River Meridian
- 2. Illinois Creek located in NW1/4 Section 10, T.017S., R.005E. Kateel River Meridian

The drilling described in this letter will take place on WACG state mining claims with ADL No.'s 728221 (ICP34), 728224 (ICP37), 728225 (ICP38), 728228 (ICP41), 728229 (ICP42), 728232 (ICP45) and 728233 (ICP46)

Prior to starting the drill program WACG will complete a cadastral survey of the current land surface over the reclaimed leach pad and use it and the construction as-built survey for the leach pad liner to refine the depth and locations of the drill holes. This will ensure that none of the drill holes go deep enough to penetrate the existing leach pad liner.

If you have any questions regarding this APMA/MLUP amendment, please contact Mr. Jack DiMarchi at 206-790-0227 or by email at <a href="mailto:jack.dimarchi@coregeoscience.com">jack.dimarchi@coregeoscience.com</a>.
